

Page #	Line #	Comment
19	25-34	20.5.3 (B) Consider adding language to allow for updating antivirus, using removable SSDs for back-up purposes and using the Dominion macro.
48	23-26	26.3 Add ability for a County Clerk, at their discretion, to decline to coordinate a ranked voting election for a local election. NOTE – If the local government is shared by multiple counties, all county clerks must unanimously consent to coordinate a ranked voting election. (A ranked voting election as currently described by rule, will cause counties to incur substantial additional costs.)
48 49	29-37 1-7	26.4.1 – 26.4.2 & 26.5 Explanation and instructions are difficult to understand for the professional and will be even more so for the layman. It is difficult to create specific “examples” without someone interpreting that doing so provides a subtle advantage to specific candidates. Suggest counties have the option of providing ranked choice voter instructions on an additional insert instead of on the ballot.
49	3-7	26.5 A two-card ballot will create voter confusion and incur additional costs. (Entire cost of separate ballot to be borne by entity utilizing Ranked Voting – or in IGA to be handled between county and entity.) Reporting results by precinct also incurs additional costs and has a domino effect which inflates the volume of every process. Suggest making it required only when it is required for all election results in that election.
52	30	26.10.3 “Date” should be “day”.
