3a. Mainstem of the Roaring Fork River, from a point immediately below the confluence with Hunter Creek, to a point immediately below the confluence with the Fryingpan River. All tributaries to the Roaring Fork River, including wetlands, from a point immediately below the confluence with Hunter Creek to the confluence with the Colorado River, except for those tributaries included in Segment 1 and specific listings in Segments 3b-10.

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS - FOOTNOTES

- A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- B) Assessment of adequate refuge shall rely on the Cold Large Lake table value temperature criterion and applicable dissolved oxygen standard rather than the site-specific temperature standard.

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT WATER QUALITY CONTROL COMMISSION

5 CCR 1002-33

REGULATION NO. 33
CLASSIFICATIONS AND NUMERIC STANDARDS
FOR
UPPER COLORADO RIVER BASIN AND
NORTH PLATTE RIVER (PLANNING REGION 12)

. . . .

33.55 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 14, 2015 RULEMAKING; FINAL ACTION JANUARY 11, 2016; EFFECTIVE DATE JUNE 30, 2016

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Pursuant to the requirements in the Basic Standards (at 31.7(3)), the Commission reviewed the status of temporary modifications scheduled to expire before December 31, 2017, to determine whether the temporary modification should be modified, eliminated or extended. Temporary modifications of standards on two segments were reviewed.

Blue River segment 14: Temporary modification of the chronic molybdenum standard. Climax Molybdenum has presented evidence that they are making progress on the plan for eliminating the need for the temporary modification and on resolving the uncertainty regarding the underlying molybdenum standards on Blue River segment 14. However, the results of a key study will not be available in time for consideration in the June 2016 Basic Standards hearing. Therefore, the Commission extended the expiration date of the "current conditions" temporary modification for molybdenum to 12/31/2017 in order that the expected study results may be considered at a special hearing subsequent to the regularly scheduled Basic Standards hearing in June 2016.

Yampa River segment 13d: Temporary modification of the iron standard. Peabody Sage Creek Mining Company and Seneca Coal Company presented evidence that the expiration date of the iron temporary modification should be aligned with the expiration date of the iron temporary modification on Yampa River segment 13i (which was the subject of rulemaking last year). These segments are subject to the same study plan, and should have the same expiration date. The Commission extended the temporary modification to the iron standard for Yampa River segment 13d to 12/31/2017.

In addition, the Commission corrected the Regulation #33 numeric tables for Yampa River segment 13i to indicate that the iron temporary modification applies to Grassy Creek, not Little Grassy Creek. This correction is consistent with Regulation #33 and its Statements of Basis and Purpose for the iron temporary modification on Grassy Creek as adopted by the Commission in the Colorado Basin hearings in 2008 and 2014.

5 CCR 1002-34 REGULATION NO. 34 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR SAN JUAN AND DOLORES RIVER BASINS 1 - eff 03/01/2016

Effective date

03/01/2016

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT WATER QUALITY CONTROL COMMISSION

5 CCR 1002-34

REGULATION NO. 34 CLASSIFICATIONS AND NUMERIC STANDARDS FOR SAN JUAN AND DOLORES RIVER BASINS

34.1 AUTHORITY

These regulations are promulgated pursuant to section 25-8-101 et seq. C.R.S., as amended, and in particular, 25-8-203 and 25-8-204.

34.2 PURPOSE

These regulations establish classifications and numeric standards for the San Juan and the Dolores River Basins, including all tributaries and standing bodies of water south of the northern Dolores County lines, as indicated in section 34.6. The classifications identify the actual beneficial uses of the water. The numeric standards are assigned to determine the allowable concentrations of various parameters. Discharge permits will be issued by the Water Quality Control Division to comply with basic, narrative, and numeric standards and control regulations so that all discharges to waters of the state protect the classified uses. (See Regulation No. 31 section 31.14). It is intended that these and all other stream classifications and numeric standards be used in conjunction with and be an integral part of Regulation No. 31 Basic Standards and Methodologies for Surface Water.

34.3 INTRODUCTION

These regulations and tables present the classifications and numeric standards assigned to stream segments listed in the attached tables (See section 34.6(4)). As additional stream segments are classified and numeric standards for designated parameters are assigned for this drainage system, they will be added to or replace the numeric standards in the tables in section 34.6(4). Any additions or revisions of classifications or numeric standards can be accomplished only after public hearing by the Commission and proper consideration of evidence and testimony as specified by the statute and the "basic regulations".

34.4 **DEFINITIONS**

See the Colorado Water Quality Control Act and the codified water quality regulations for definitions.

34.5 BASIC STANDARDS

(1) <u>TEMPERATURE</u>

All waters of the San Juan/Dolores River Basin are subject to the following standard for temperature. (Discharges regulated by permits, which are within the permit limitations, shall not be subject to enforcement proceedings under this standard). Temperature shall maintain a normal pattern of diurnal and seasonal fluctuations with no abrupt changes and shall have no increase in temperature of a magnitude, rate, and duration deemed deleterious to the resident aquatic life. This standard shall not be interpreted or applied in a manner inconsistent with section 25-8-104, C.R.S.

(2) **QUALIFIERS**

See Basic Standards and Methodologies for Surface Water for a listing of organic standards at 31.11 and metal standards found at 31.16 Table III. The column in the tables headed "Water + Fish" are presumptively applied to all aquatic life class 1 streams which also have a water supply classification, and are applied to aquatic life class 2 streams which also have a water supply classification, on a case-by-case basis as shown in the Tables 34.6(4). The column in the tables at 31.11 and 31.16 Table III headed "Fish Ingestion" is presumptively applied to all aquatic life class 1 streams which do not have a water supply classification, and are applied to aquatic life class 2 streams which do not have a water supply classification, on a case-by-case basis as shown in Tables 34.6(4).

(3) **URANIUM**

- (a) All waters of the San Juan/Dolores River Basin, are subject to the following basic standard for uranium, unless otherwise specified by a water quality standard applicable to a particular segment. However, discharges of uranium regulated by permits which are within these permit limitations shall not be a basis for enforcement proceedings under this basic standard.
- (b) Uranium level in surface waters shall be maintained at the lowest practicable level.
- (c) In no case shall uranium levels in waters assigned a water supply classification be increased by any cause attributable to municipal, industrial, or agricultural discharges so as to exceed 16.8-30 µg/l or naturally-occurring concentrations (as determined by the State of Colorado), whichever is greater.
 - (i) The first number in the 16.8-30 ug/l range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

(4) <u>INDIAN RESERVATIONS</u>

Some of the waterbodies in the San Juan/Dolores River Basin cross boundaries of Indian Reservations of the Southern Ute and Ute Mountain Ute Tribes. The Commission has included water quality classifications and standards on lands within the boundaries of these reservations in order to avoid a gap in the classifications and standards adopted for the river basins in question. The Southern Ute Indian tribe has not yet been granted authority by EPA to conduct their own water quality program, and EPA has granted the Ute Mountain Ute Indian tribe's application for treatment as a state with respect to adoption of water quality standards. The Commission intends that the classifications and standards that it is adopting apply to the lands in question only to the extent that the state has jurisdiction and is not attempting to resolve that jurisdictional issue here. Segments within Reservation boundaries are noted in the segment description and last column of Tables 34.6(4).

34.6 TABLES

(1) Introduction

The numeric standards for various parameters in this regulation and in the tables in Appendix 34-1 were assigned by the Commission after a careful analysis of the data presented on actual stream conditions and on actual and potential water uses.

Numeric standards are not assigned for all parameters listed in the tables attached to Regulation No. 31. If additional numeric standards are found to be needed during future periodic reviews, they can be assigned by following the proper hearing procedures.

(2) Abbreviations:

(a) The following abbreviations are used in this regulation and in the tables in Appendix 34-1:

°C = degrees Celsius

CL = cold lake temperature tier

CLL = cold large lake temperature tier

CS-I = cold stream temperature tier one

CS-II = cold stream temperature tier two

D.O. = dissolved oxygen

DM = daily maximum temperature

E.coli = escherichia coli mg/l = milligrams per liter

MWAT = maximum weekly average temperature

OW = outstanding waters

sc = sculpin sp = spawning

SSE = site-specific equation

t = total

T = total recoverable

tr = trout

TVS = table value standard μg/l = micrograms per liter UP = use-protected

WAT = weekly average temperature

WS = water supply

WS-II = warm stream temperature tier two
WS-III = warm stream temperature tier three

WL = warm lake temperature tier

(b) In addition, the following abbreviations are used:

Fe(ch) = WS Mn(ch) = WS $SO_4 = WS$

These abbreviations mean: For all surface waters with an actual water supply use, the less restrictive of the following two options shall apply as numerical standards, as specified in the Basic Standards and Methodologies at 31.16 Table II and III:

(i) existing quality as of January 1, 2000; or

(ii) Iron = $300 \mu g/l$ (dissolved) Manganese = $50\mu g/l$ (dissolved)

 $SO_4 = 250 \text{ mg/l}$

For all surface waters with a "water supply" classification that are not in actual use as a water supply, no water supply standards are applied for iron, manganese or sulfate, unless the Commission determines as the result of a site-specific rulemaking hearing that such standards are appropriate.

- (c) Temporary Modification for Water + Fish Chronic Arsenic Standard
 - (i) The temporary modification for chronic arsenic standards applied to segments with an arsenic standard of 0.02 μ g/l that has been set to protect the Water+Fish qualifier is listed in the temporary modification and qualifiers column as As(ch)=hybrid.
 - (ii) For discharges existing on or before 6/1/2013, the temporary modification is: As(ch)=current condition, expiring on 12/31/2021.
 - (iii) For new or increased discharges commencing on or after 6/1/2013, the temporary modification is: As(ch)=0.02-3.0 μg/l (Trec), expiring on 12/31/2021.
 - (A) The first number in the range is the health-based water quality standard previously adopted by the Commission for the segment.
 - (B) The second number in the range is a technology based value established by the Commission for the purpose of this temporary modification.
 - (C) Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-ofpipe" discharge level more restrictive than the second number in the range.

(3) <u>Table Value Standards</u>

In certain instances in the tables in Appendix 34-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS (Concentrations in ug/l unless noted)

PARAMETER⁽¹⁾

TABLE VALUE STANDARDS⁽²⁾⁽³⁾

Aluminum
(Trec)

Acute = $e^{(1.3695[ln(hardness)]+1.8308)}$ pH equal to or greater than 7.0

Chronic=e(1.3695[In(hardness)]-0.1158)

pH less than 7.0

Chronic= e^{(1.3695[In(hardness)]-0.1158)} or 87, whichever is less

$$acute = \frac{0.275}{1 + 10^{-7.204} - pH} + \frac{39.0}{1 + 10^{-pH - 7.204}}$$

$$chronic = \left(\frac{0.0577}{1 + 10^{-7.688 - pH}} + \frac{2.487}{1 + 10^{-pH - 7.688}}\right) * MIN\left(2.85, 1.45 * 10^{-0.028(25 - T)}\right)$$

Warm Water = (mg/l as N)Total

acute =
$$\frac{0.411}{1+10^{7.204}-pH} + \frac{58.4}{1+10^{pH}-7.204}$$

$$chronic \ (Apr1-Aug31) = \left(\frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}}\right) * MIN \\ \left(2.85, 1.45*10^{0.028(25-T)}\right)$$

$$chronic \; (Sep \, 1 - Mar \, 31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}}\right) * 1.45 * 10^{0.028*(25 - MAX(T, 7))}$$

NH₃ = old TVS

Cold Water Acute = 0.43/FT/FPH/2^(4 old)in mg/l (N)

Warm Water Acute = 0.62/FT/FPH/2^(4 old)in mg/ (N)

Cadmium

Acute = $(1.136672-[ln(hardness)x(0.041838)])xe^{0.9151[ln(hardness)]-3.1485}$

 $Acute(Trout) = (1.136672 - [ln(hardness)x(0.041838)])xe^{0.9151[ln(hardness)] - 3.6236}$

Chronic = $(1.101672-[ln(hardness)x(0.041838)]e^{0.7998[ln(hardness)]-4.4451}$

Chromium III⁽⁵⁾

Acute = $e^{(0.819[ln(hardness)]+2.5736)}$

Chronic= e^{(0.819[In(hardness)]+0.5340)}

Chromium VI⁽⁵⁾

Acute = 16

Chronic = 11

Copper

Acute = $e^{(0.9422[ln(hardness)]-1.7408)}$

Chronic = $e^{(0.8545[ln(hardness)]-1.7428)}$

Lead

Acute = $(1.46203-[ln(hardness)*(0.145712)])*e^{(1.273[ln(hardness)]-1.46)}$

Chronic = $(1.46203-[ln(hardness)*(0.145712)])*e^{(1.273[ln(hardness)]-4.705)}$

Manganese

Acute = $e^{(0.3331[ln(hardness)]+6.4676)}$

Chronic = $e^{(0.3331 [ln(hardness)]+5.8743)}$

Nickel

Acute = $e^{(0.846[ln(hardness)]+2.253)}$

Chronic = $e^{(0.846[ln(hardness)]+0.0554)}$

Selenium⁽⁶⁾

Acute = 18.4

Chronic = 4.6

Silver

Acute = $\frac{1}{2}e^{(1.72[\ln(\text{hardness})]-6.52)}$

Chronic = $e^{(1.72[ln(hardness)]-9.06)}$

Chronic(Trout) = $e^{(1.72[ln(hardness)]-10.51)}$

Temperature

TEMPERATURE TIER	TIER CODE	SPECIES EXPECTED TO BE PRESENT	APPLICABLE MONTHS	TEMPERAT STANDARI	_
				MWAT	DM
Cold Stream Tier 1	CS-I	brook trout, cutthroat trout	June – Sept.	17.0	21.7
			Oct. – May	9.0	13.0
Cold Stream Tier 2	CS-II	all other cold-water species	April – Oct.	18.3	23.9
		Species	Nov. – March	9.0	13.0
Cold Lakes	CL	brook trout, brown trout, cutthroat trout, lake trout,	April – Dec.	17.0	21.2
		rainbow trout, Arctic grayling, sockeye salmon	Jan. – March	9.0	13.0

Uranium Acute = $e^{(1.1021[ln(hardness)]+2.7088)}$

Chronic = $e^{(1.1021[ln(hardness)]+2.2382)}$

Zinc Acute = $0.978 * e^{(0.9094[ln(hardness)]+0.9095)}$

Chronic = $0.986 * e^{(0.9094[ln(hardness)]+0.6235)}$

if hardness less than 102 mg/l CaCO₃

Chronic (sculpin) = $e^{(2.140[ln(hardness)]-5.084)}$

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.

(4 old) $FT = 10^{0.03(20-TCAP)}$;

Where TCAP is $\leq T \leq 30$

 $FT = 10^{0.03(20-T)}$:

Where 0 is $\leq T \leq TCAP$

TCAP = 20° C cold water aquatic life species present

TCAP = 25° C cold water aquatic life species absent

FPH = 1; Where 8 <pH ≤9

FPH = $\frac{1 + 10^{(7.4-pH)}}{1.25}$; Where $6.5 \le pH \le 8$

FPH means the acute pH adjustment factor, defined by the above formulas.

FT means the acute temperature adjustment factor, defined by the above formulas.

T means temperature measured in degrees celsius.

TCAP means temperature CAP; the maximum temperature which affects the toxicity of ammonia to salmonid and non-salmonid fish groups.

NOTE: If the calculated acute value is less than the calculated chronic value, then the calculated chronic value shall be used as the acute standard.

- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the Commission on a site-specific basis where appropriate evidence is submitted.
- (5) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 ug/l total chromium in those waters classified for domestic water use.
- (6) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.
- (7) *E.coli* criteria and resulting standards for individual water segments, are established as indicators of the potential presence of pathogenic organisms. Standards for *E. coli* are expressed as a two-month geometric mean. Site-specific or seasonal standards are also two-month geometric means unless otherwise specified.
- (8) All phosphorus standards are based upon the concentration of total phosphorus.
- (9) The pH standards of 6.5 (or 5.0) and 9.0 are an instantaneous minimum and maximum, respectively to be applied as effluent limits. In determining instream attainment of water quality standards for pH, appropriate averaging periods may be applied, provided that beneficial uses will be fully protected.

(4) <u>Discharger Specific Variances</u>

(a) Animas and Florida River Segment 13b

Discharger Specific Variance, Durango West Metro Dist.#2 (COG589115): The first number is the underlying standard previously adopted by the Commission for the segment and represents the long-term goal for the waterbody. The first number will be used for assessing attainment for the waterbody and for the development of effluent limitations. The second number is the Commission's determination of the effluent concentration with the highest degree of protection of the classified use that is feasible for Durango West Metro District. Control requirements, such as discharge permit effluent limitations, shall be established using the first number as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number during the term of the DSV for the named dischargers.

(5) <u>Stream Classifications and Water Quality Standards Tables</u>

The stream classifications and water quality standards tables in Appendix 34-1 are incorporated herein by reference.

34.45 STATEMENT OF BASIS AND PURPOSE REGARDING THE ADOPTION OF NON-SUBSTANTIVE CHANGES TO THE CLASSIFICATION AND NUMEIRC STANDARDS FOR

8

. . . .

SAN JUAN RIVER AND DOLORES RIVER BASINS, JANUARY 11, 2016 RULEMAKING; EFFECTIVE DATE MARCH 1. 2016

The provisions of C.R.S. 25-8-202(1)(i) and 25-8-401(2) provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

The Commission, in a public rulemaking hearing adopted extensive changes to the format of this regulation. The Commission does not intend to change any existing designations, use classifications or standards, or the implementation of any standards as the results of changing the format.

This rulemaking was in response to longstanding issues with managing the information contained in the standards tables. The changes made in this hearing reflect a change from storing the information in word processing documents to storing the information in a relational database. This change in platform will provide better consistency, facilitate error checking as well as a more readable format for the standards tables. Storing the information in a database allows it to be used more efficiently by other programs in the Division.

While it was the Commission's intent not to change the substantive meaning of the regulations in this rulemaking, in cases where there was ambiguity the revised regulation reflects the Commission's interpretation of the previous format based on Regulation #31 (the Basic Standards and Methodologies for Surface Water) and the experience of the Commission and its staff.

Overall format changes: The new format displays parameters by name, rather than by period table element abbreviations. The section formerly titled "Temporary Modifications and Qualifiers" does not appear in the new format. Instead, there is a separate section for qualifiers, and an "Other" section. Temporary modifications, variances and other footnotes are displayed in the "Other" section. Many items that were formerly in the "Temporary Modifications and Qualifiers" column will be displayed in the "Other" column and will have a different appearance or modified wording, although the information is substantively the same. Each footnote in the "Other" section is preceded by a heading that indicates where the footnote applies:

- Footnotes regarding a use classification will begin with the heading "Classification..."
- Footnotes regarding the antidegradation designation begin with the heading "Designation..."
- Footnotes that relate to a particular standard begin with the name of the parameter, for example "Selenium(chronic)= ..."

Constraints of the new format: Some adjustments were made to the way that data is displayed in order to be compatible with the functions of the Standards Database. Database organization requires that information which relates to multiple standards must be attached to each individual parameter. For example, a segment with a temporary modification listed for "all parameters" in the old format will have a temporary modification listed for each individual parameter in the new format. There are also spacing constraints in the new format, which require some information to be moved either to the "other" box on the new format, or moved out of the segment entirely and into another location in the regulation.

<u>Clarification of changes</u>: The shift to a database organizational structure required consistency in the way each data element is addressed. To insure that data is stored and displayed correctly, the following changes were made

• The "type" of temporary modification is no longer displayed in the segment tables, since they have no regulatory effect and have been inconsistently displayed.

- In the old format, waters that had a reviewable antidegradation designation were identified by the absence of either "UP" or "OW" in the designation column. These segments now display the word "reviewable" under the designation heading. There needed to be a value in the designation column for every segment.
- Dissolved standards are not specifically noted as dissolved in the new format. All metals standards are dissolved unless noted with a "T" or a "t". For example, a manganese standard in the old format of "WS(dis") is displayed as "WS" in the new format.
- A new footnote 7 was added to clarify that although E. coli is listed in the "chronic" column, the standard is a two-month geometric mean rather than a 30-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 7.
- A new footnote 8 was added to indicate that all phosphorus standards are based upon the
 concentration of total phosphorus. In the old format, individual phosphorus standards were noted
 as "total" in some basins and not others.
- A new footnote 9 was added to clarify that although pH is listed in the "acute" column, the standard is not applied as a 1-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 3.
- Physical and Biological Parameters: Some parameters are not specifically identified in the old format segment tables as acute or chronic. The new format requires that each parameter is placed in either the acute or chronic column. Specifically, these parameters and the basis for being identified as acute or chronic are as follows:
 - pH (acute) Regulation #31, Table 1, footnote 3
 - E. Coli (chronic) Regulation #31, Table 1, footnote 7
 - D.O. (chronic) Regulation #31, Table 1, footnote 1
 - cyanide (acute) Regulation #31, Table 2
 - sulfide (chronic) Regulation #31, Table 2
 - nitrate (acute) Regulation #31, Table 2
 - nitrite (chronic) not specified in Regulation #31. Nitrite has been implemented as a 30day average standard in permits and assessments.
 - chloride (chronic) Regulation #31, Table 2
 - boron (chronic) Regulation #31, Table 2
 - sulfate (chronic) Regulation #31, Table 2
- The previous format used Footnote 1 instead of Footnote A for the arsenic hybrid standard. The label for the footnote was changed from "1" to "A" but the text of the footnote did not change.
- The footnote on Animas and Florida Segment 2 was modified to reduce the text to less than 200 characters, which is the maximum that can be included in the segment. Text longer than 200 characters has to be moved to a footnote outside the segment table (either at the front of the regulation or following the segment tables). The text change is as follows:

"The concentration of dissolved aluminum, cadmium, copper, iron, lead, manganese, and zinc that is directed toward maintaining and achieving standards established for segments 3a,4a and 4b."

• The footnote regarding the variance conditions on Animas and Florida Segment 13b was moved to 34.6(4)(a) because it exceeded 200 characters and could not be shortened without substantively changing the meaning of the text.

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS - FOOTNOTES

A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

REGULATION NO. 34 CLASSIFICATIONS AND NUMERIC STANDARDS FOR SAN JUAN AND DOLORES RIVER BASINS

. . . .

34.46 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 14, 2015 RULEMAKING; FINAL ACTION JANUARY 11, 2016; EFFECTIVE DATE JUNE 30, 2016

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Pursuant to the requirements in the Basic Standards (at 31.7(3)), the Commission reviewed the status of temporary modifications scheduled to expire before December 31, 2017, to determine whether the temporary modification should be modified, eliminated or extended. Temporary modifications of standards on 3 segments were reviewed.

Animas River segment 3b: Temporary modifications of the cadmium, copper and zinc standards. The Town of Silverton has presented evidence that they are making progress on the plan for eliminating the need for the temporary modification. The Commission made no change to the expiration date of 12/31/2017 as the original time allotment was deemed adequate.

La Plata et al. segments 7a and 8c: Temporary modifications of the ammonia standards for these segments were extended to 6/30/2018. The Division is working with small domestic dischargers on these segments to explore the possibility of proposing discharger specific variances. Progress continues to be made to improve water treatment for these segments.

REGULATION NO. 35 CLASSIFICATIONS AND NUMERIC STANDARDS FOR GUNNISON AND LOWER DOLORES RIVER BASINS

35.1 AUTHORITY

These regulations are promulgated pursuant to section 25-8-101 et seq. C.R.S., as amended, and in particular, 25-8-203 and 25-8-204.

35.2 PURPOSE

These regulations establish classifications and numeric standards for the Gunnison River/Lower Dolores River Basins, including all tributaries and standing bodies of water. This includes all or parts of Gunnison, Delta, Montrose, Ouray, Mesa, Saguache and Hinsdale Counties. This also includes the lower Dolores River and its tributaries in Dolores, Montrose, Mesa and San Miguel Counties. The classifications identify the actual beneficial uses of the water. The numeric standards are assigned to determine the allowable concentrations of various parameters. Discharge permits will be issued by the Water Quality Control Division to comply with basic, narrative, and numeric standards and control regulations so that all discharges to waters of the state protect the classified uses. (See Regulation No. 31, section 31.14). It is intended that these and all other stream classifications and numeric standards be used in conjunction with and be an integral part of Regulation No.31 Basic Standards and Methodologies for Surface Water.

35.3 INTRODUCTION

These regulations and tables present the classifications and numeric standards assigned to stream segments listed in the attached tables (See section 35.6(4)). As additional stream segments are classified and numeric standards for designated parameters are assigned for this drainage system, they will be added to or replace the numeric standards in the tables in section 35.6(4). Any additions or revisions of classifications or numeric standards can be accomplished only after public hearing by the Commission and proper consideration of evidence and testimony as specified by the statute and the "basic regulations".

35.4 DEFINITIONS

See the Colorado Water Quality Control Act and the codified water quality regulations for definitions.

35.5 BASIC STANDARDS

(1) TEMPERATURE

All waters of the Gunnison/Lower Dolores River Basins are subject to the following standard for temperature. (Discharges regulated by permits, which are within the permit limitations, shall not be subject to enforcement proceedings under this standard). Temperature shall maintain a normal pattern of diurnal and seasonal fluctuations with no abrupt changes and shall have no increase in temperature of a magnitude, rate, and duration deemed deleterious to the resident

aquatic life. This standard shall not be interpreted or applied in a manner inconsistent with section 25-8-104. C.R.S.

(2) QUALIFIERS

See Basic Standards and Methodologies for Surface Water for a listing of organic standards at 31.11 and metal standards found at 31.16 Table III. The column in the tables headed "Water + Fish" are presumptively applied to all aquatic life class 1 streams which also have a water supply classification, and are applied to aquatic life class 2 streams which also have a water supply classification, on a case-by-case basis as shown in the Tables 35.6(4). The column in the tables at 31.11 and 31.16 Table III headed "Fish Ingestion" is presumptively applied to all aquatic life class 1 streams which do not have a water supply classification, and are applied to aquatic life class 2 streams which do not have a water supply classification, on a case-by-case basis as shown in Tables 35.6(4).

(3) <u>URANIUM</u>

- (a) All waters of the Gunnison/Lower Dolores River Basin, are subject to the following basic standard for uranium, unless otherwise specified by a water quality standard applicable to a particular segment. However, discharges of uranium regulated by permits which are within these permit limitations shall not be a basis for enforcement proceedings under this basic standard.
- (b) Uranium level in surface waters shall be maintained at the lowest practicable level.
- (c) In no case shall uranium levels in waters assigned a water supply classification be increased by any cause attributable to municipal, industrial, or agricultural discharges so as to exceed 16.8-30 μg/l or naturally-occurring concentrations (as determined by the State of Colorado), whichever is greater.
 - (i) The first number in the 16.8-30 ug/l range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

35.6 TABLES

(1) <u>Introduction</u>

The numeric standards for various parameters in this regulation and in the tables in Appendix 35-1 were assigned by the Commission after a careful analysis of the data presented on actual stream conditions and on actual and potential water uses.

Numeric standards are not assigned for all parameters listed in the tables attached to Regulation No. 31. If additional numeric standards are found to be needed during future periodic reviews, they can be assigned by following the proper hearing procedures.

(2) <u>Abbreviations</u>:

(a) The following abbreviations are used in this regulation and in the tables in Appendix 35-1:

°C = degrees Celsius ch = Chronic (30-day)

CI = Chloride

CL = cold lake temperature tier

CLL = cold large lake temperature tier

CS-I = cold stream temperature tier one

CS-II = cold stream temperature tier two

D.O. = dissolved oxygen

DM = daily maximum temperature

E. coli = escherichia coli Mg/l = milligrams per liter

MWAT = maximum weekly average temperature

OW = outstanding waters

sc = sculpin sp = spawning

SSE = site-specific equation T = total recoverable

 $egin{array}{lll} t &=& total \\ tr &=& trout \\ \end{array}$

TVS = table value standard

µg/l = micrograms per liter

UP = use-protected

WAT = weekly average temperature

WS = water supply

WS-II = warm stream temperature tier two
WS-III = warm stream temperature tier three

WL = warm lake temperature tier

(b) In addition, the following abbreviations are used:

Fe(ch) = WS Mn(ch) = WS SO_4 = WS

These abbreviations mean: For all surface waters with an actual water supply use, the less restrictive of the following two options shall apply as numerical standards, as specified in the Basic Standards and Methodologies at 31.16 Table II and III:

(1) existing quality as of January 1, 2000; or

(2) Iron = 300 μ g/l (dissolved) Manganese = 50 μ g/l (dissolved) SO₄ = 250 μ g/l

For all surface waters with a "water supply" classification that are not in actual use as a water supply, no water supply standards are applied for iron, manganese or sulfate, unless the Commission determines as the result of a site-specific rulemaking hearing that such standards are appropriate.

(c) Temporary Modification for Water + Fish Chronic Arsenic Standard

- (i) The temporary modification for chronic arsenic standards applied to segments with an arsenic standard of 0.02 μ g/l that has been set to protect the Water+Fish qualifier is listed in the temporary modification and qualifiers column as As(ch)=hybrid.
- (ii) For discharges existing on or before 6/1/2013, the temporary modification is: As(ch)=current condition, expiring on 12/31/2021.
- (iii) For new or increased discharges commencing on or after 6/1/2013, the temporary modification is: As(ch)=0.02-3.0 µg/l (Trec), expiring on 12/31/2021.
 - (a) The first number in the range is the health-based water quality standard previously adopted by the Commission for the segment.
 - (b) The second number in the range is a technology based value established by the Commission for the purpose of this temporary modification.
 - (c) Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range.

(3) Table Value Standards

In certain instances in the tables in Appendix 35-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS

(Concentrations in µg/l unless noted)

PARAMETER⁽¹⁾

TABLE VALUE STANDARDS ⁽²⁾⁽³⁾

Acute = $e^{(1.3695[ln(hardness)]+1.8308)}$ pH equal to or greater than 7.0

Chronic= $e^{(1.3695[ln(hardness)]-0.1158)}$ pH less than 7.0

Chronic= $e^{(1.3695[ln(hardness)]-0.1158)}$ or 87, whichever is less

Ammonia (4) Cold Water = (mg/l as N)Total
$$acute = \frac{0.275}{1 + 10^{-7.204} - pH} + \frac{39.0}{1 + 10^{-pH - 7.204}}$$

$$chronic = \left(\frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}}\right) * MIN \left(2.85, 1.45 * 10^{0.028(25-T)}\right)$$

acute =
$$\frac{0.411}{1+10^{-7.204}-pH} + \frac{58.4}{1+10^{-pH}-7.204}$$

$$chronic \ (Apr1-Aug31) = \left(\frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}}\right) * MIN \\ \left(2.85, 1.45*10^{0.028(25-T)}\right) \\ chronic \ (Sep1-Mar31) = \left(\frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}}\right) * 1.45*10^{0.028*(25-MAX(T, 7))}$$

chronic
$$(Sep 1 - Mar 31) = \left(\frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}}\right) *1.45 *10^{0.028*(25-MAX(T, 7))}$$

Cadmium

Acute = $(1.136672-[ln(hardness) \times (0.041838)]) \times e^{0.9151[ln(hardness)]-3.1485}$

Acute(Trout) = $(1.136672-[ln(hardness)x (0.041838)])x e^{0.9151[ln(hardness)]-3.6236}$

Chronic = $(1.101672-[ln(hardness) x(0.041838)] x e^{0.7998[ln(hardness)]-4.4451]}$

Acute = $e^{(0.819[ln(hardness)]+2.5736)}$ Chromium III⁽⁵⁾

Chronic = $e^{(0.819[ln(hardness)]+0.5340)}$

Chromium VI⁽⁵⁾ Acute = 16

Chronic = 11

Acute = $e^{(0.9422[ln(hardness)]-1.7408)}$ Copper

Chronic = $e^{(0.8545[ln(hardness)]-1.7428)}$

Lead

Acute = $(1.46203-[(ln(hardness)*(0.145712)])*e^{(1.273[ln(hardness)]-1.46)}$

Chronic = $(1.46203-[(ln(hardness)*(0.145712)])*e^{(1.273[ln(hardness)]-4.705)}$

Acute = $e^{(0.3331[ln(hardness)]+6.4676)}$ Manganese

Chronic = $e^{(0.3331 [ln (hardness)]+5.8743)}$

Acute = $e^{(0.846[ln(hardness)]+2.253)}$ Nickel

Chronic = $e^{(0.846[ln(hardness)]+0.0554)}$

_

Selenium⁽⁶⁾ Acute = 18.4

Chronic = 4.6

_

Silver Acute = $\frac{1}{2}e^{(1.72[\ln(\text{hardness})]-6.52)}$

Chronic = $e^{(1.72[ln(hardness)]-9.06)}$

Chronic(Trout) = $e^{(1.72[ln(hardness)]-10.51)}$

	Chronic (sculpin)	$= e^{(2.140[ln])}$	(hardness)]-5.084)			

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the commission on a site-specific basis where appropriate evidence is submitted.
- (5) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 ug/l total chromium in those waters classified for domestic water use.
- (6) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.

- (7) *E.coli* criteria and resulting standards for individual water segments, are established as indicators of the potential presence of pathogenic organisms. Standards for *E. coli* are expressed as a two-month geometric mean. Site-specific or seasonal standards are also two-month geometric means unless otherwise specified.
- (8) All phosphorus standards are based upon the concentration of total phosphorus.
- (9) The pH standards of 6.5 (or 5.0) and 9.0 are an instantaneous minimum and maximum, respectively to be applied as effluent limits. In determining instream attainment of water quality standards for pH, appropriate averaging periods may be applied, provided that beneficial uses will be fully protected.
- (4) Reserved.
- (5) <u>Stream Classifications and Water Quality Standards Tables</u>

The stream classifications and water quality standards tables in Appendix 35-1 are incorporated herein by reference.

. . . .

35.41 STATEMENT OF BASIS AND PURPOSE REGARDING THE ADOPTION OF NON-SUBSTANTIVE CHANGES TO THE CLASSIFICATION AND NUMEIRC STANDARDS FOR GUNISON AND LOWER DOLORES RIVER BASINS, JANUARY 11, 2016 RULEMAKING; EFFECTIVE DATE MARCH 1, 2016

The provisions of C.R.S. 25-8-202(1)(i) and 25-8-401(2) provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

The Commission, in a public rulemaking hearing adopted extensive changes to the format of this regulation. The Commission does not intend to change any existing designations, use classifications or standards, or the implementation of any standards as the results of changing the format.

This rulemaking was in response to longstanding issues with managing the information contained in the standards tables. The changes made in this hearing reflect a change from storing the information in word processing documents to storing the information in a relational database. This change in platform will provide better consistency, facilitate error checking as well as a more readable format for the standards tables. Storing the information in a database allows it to be used more efficiently by other programs in the Division.

While it was the Commission's intent not to change the substantive meaning of the regulations in this rulemaking, in cases where there was ambiguity the revised regulation reflects the Commission's interpretation of the previous format based on Regulation #31 (the Basic Standards and Methodologies for Surface Water) and the experience of the Commission and its staff.

Overall format changes: The new format displays parameters by name, rather than by period table element abbreviations. The section formerly titled "Temporary Modifications and Qualifiers" does not appear in the new format. Instead, there is a separate section for qualifiers, and an "Other" section. Temporary modifications, variances and other footnotes are displayed in the "Other" section. Many items that were formerly in the "Temporary Modifications and Qualifiers" column will be displayed in the "Other"

column and will have a different appearance or modified wording, although the information is substantively the same. Each footnote in the "Other" section is preceded by a heading that indicates where the footnote applies:

- Footnotes regarding a use classification will begin with the heading "Classification..."
- Footnotes regarding the antidegradation designation begin with the heading "Designation..."
- Footnotes that relate to a particular standard begin with the name of the parameter, for example "Selenium(chronic)= ..."

Constraints of the new format: Some adjustments were made to the way that data is displayed in order to be compatible with the functions of the Standards Database. Database organization requires that information which relates to multiple standards must be attached to each individual parameter. For example, a segment with a temporary modification listed for "all parameters" in the old format will have a temporary modification listed for each individual parameter in the new format. There are also spacing constraints in the new format, which require some information to be moved either to the "other" box on the new format, or moved out of the segment entirely and into another location in the regulation.

<u>Clarification of changes</u>: The shift to a database organizational structure required consistency in the way each data element is addressed. To insure that data is stored and displayed correctly, the following changes were made

- The "type" of temporary modification is no longer displayed in the segment tables, since they have no regulatory effect and have been inconsistently displayed.
- In the old format, waters that had a reviewable antidegradation designation were identified by the absence of either "UP" or "OW" in the designation column. These segments now display the word "reviewable" under the designation heading. There needed to be a value in the designation column for every segment.
- Dissolved standards are not specifically noted as dissolved in the new format. All metals standards are dissolved unless noted with a "T" or a "t". For example, a manganese standard in the old format of "WS(dis") is displayed as "WS" in the new format.
- A new footnote 7 was added to clarify that although E. coli is listed in the "chronic" column, the standard is a two-month geometric mean rather than a 30-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 7.
- A new footnote 8 was added to indicate that all phosphorus standards are based upon the concentration of total phosphorus. In the old format, individual phosphorus standards were noted as "total" in some basins and not others.
- A new footnote 9 was added to clarify that although pH is listed in the "acute" column, the standard is not applied as a 1-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 3.
- Physical and Biological Parameters: Some parameters are not specifically identified in the old format segment tables as acute or chronic. The new format requires that each parameter is placed in either the acute or chronic column. Specifically, these parameters and the basis for being identified as acute or chronic are as follows:
 - pH (acute) Regulation #31, Table 1, footnote 3

- E. Coli (chronic) Regulation #31, Table 1, footnote 7
- D.O. (chronic) Regulation #31, Table 1, footnote 1
- cyanide (acute) Regulation #31, Table 2
- sulfide (chronic) Regulation #31, Table 2
- nitrate (acute) Regulation #31, Table 2
- nitrite (chronic) not specified in Regulation #31. Nitrite has been implemented as a 30-day average standard in permits and assessments.
- chloride (chronic) Regulation #31, Table 2
- boron (chronic) Regulation #31, Table 2
- sulfate (chronic) Regulation #31, Table 2
- The previous format used Footnote 1 instead of Footnote A for the arsenic hybrid standard. The label for the footnote was changed from "1" to "A" but the text of the footnote did not change.

See 25.6 for details on TVS. TVS(tr), TVS(cs), VS

29a. Mainstem of the Lake Fork of the Gunnison including all tributaries and wetlands, from the source to a point immediately above the confluence with Eaton Creek, except for the specific listing in Segments 1, 9b, 29b, 30, 31 and 32. Cebolla Creek, including all tributaries and wetlands, from the source to the Hinsdale/Gunnison County line. Powderhorn Creek, including all tributaries and wetlands, from the source to the confluence with Cebolla Creek.

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS - FOOTNOTES

A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT WATER QUALITY CONTROL COMMISSION

5 CCR 1002-35

REGULATION NO. 35 CLASSIFICATIONS AND NUMERIC STANDARDS FOR GUNNISON AND LOWER DOLORES RIVER BASINS

. . . .

35.42 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 14, 2015 RULEMAKING; FINAL ACTION JANUARY 11, 2016; EFFECTIVE DATE JUNE 30, 2016

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Pursuant to the requirements in the Basic Standards (at 31.7(3)), the Commission reviewed the status of temporary modifications scheduled to expire before December 31, 2017, to determine whether the temporary modification should be modified, eliminated or extended. Temporary modifications of standards on four segments were reviewed.

The Commission took no action on the temporary modifications on the following segments.

Uncompanyer segment 4b: Temporary modification of the selenium standards. The Commission took no action on the selenium temporary modifications on Uncompanyer segment 4b. The Town of Olathe did not participate in this rulemaking but the temporary modification will be reviewed in December 2016.

The Commission deleted the temporary modification on the following segment.

Upper Gunnison River segment 20: Temporary modification of the acute and chronic uranium standards. These temporary modifications expired on 6/30/2015. The Commission authorized deletion of the temporary modification from the tables.

The Commission extended the temporary modifications on the following segments.

Lower Gunnison segment 2: Temporary modification of the selenium standard. The Commission extended the temporary modification for chronic selenium with a narrative value of "current condition" to December 31, 2022 to coincide with the next basin review. The City of Delta wastewater treatment facility is currently discharging selenium at an average concentration of 8.45 ug/L and is addressing the inflow and infiltration into their collection system that is the cause of elevated selenium in their effluent. The City of Delta recently purchased a new wheeled collection system camera and has identified, with video and sampling a few sources of I & I (Inflow and Infiltration) and funds up to \$150,000 for this year have been allocated for pipe replacement. There is also still significant uncertainty concerning the underlying selenium

standard. Time is needed to wait for the EPA's new selenium criteria and implementation guidance, and to determine an appropriate underlying selenium standard for Lower Gunnison segment 2. The progress on resolving the uncertainty with the selenium standard will be reviewed at the annual temporary modification hearing December 2020.

Upper Gunnison segment 12: Temporary modification of metals standards. The Commission extended the existing temporary modifications for cadmium, copper and zinc, which were adopted for segment 12 during the September 2012 rulemaking; these temporary modifications are now scheduled to expire on December 31, 2017. This extension will allow sufficient time to resolve the existing uncertainty regarding metals loading sources to segment 12 and develop site-specific standards. It will also reconcile the expiration date for the temporary modifications with the projected effective date for revised water quality standards adopted during the June 2017 Regulation #35 basin hearing. U.S. Energy presented evidence that progress is being made on implementation of the Study Plan to Evaluate Metals Loading in the Coal Creek Watershed in the Vicinity of the Keystone Mine (the "Study Plan"). The Study Plan, as approved by the Commission, is intended to identify and quantify sources of cadmium, copper and zinc loading that may be affecting water quality in segment 12, including groundwater down gradient of the flooded Keystone Mine workings. To address concerns regarding the groundwater portion of the study, U.S. Energy completed a longitudinal sampling event in November 2015. U.S. Energy identified activities it plans to complete over the next eighteen months to be ready to develop and propose site-specific water quality standards in June 2017, which includes continued data collection (if needed) and evaluation, report preparation, site-specific standards proposal development, and meetings with the agencies and stakeholders. The surface water data collected as part of the Study Plan and additional groundwater data as required by the groundwater portion of the plan will be used by U.S. Energy to develop site-specific standards for segment 12, if appropriate. Water quality improvements and seasonal variation evident from the long-term water quality data collection effort in segment 12 will be evaluated throughout the remainder of the temporary modifications during the development and consideration of sitespecific standards. These temporary modifications will be reviewed again at the annual temporary modifications hearing in December 2016.

PARTIES TO THE RULEMAKING HEARING

- 1. City of Delta
- 2. Resurrection Mining Company
- 3. U.S. Energy Corp.
- 4. City of Pueblo
- 5. Peabody Sage Creek Mining and Seneca Coal Company
- 6. Climax Molybdenum Company
- 7. Rio Grande Silver
- 8. City of Colorado Springs and Colorado Springs Utilities
- 9. Tri-State Generation and Transmission Association, Inc.
- 10. High Country Conservation Advocates
- 11. U.S. Environmental Protection Agency
- 12. Colorado Parks and Wildlife
- 13. Town of Crested Butte and Coal Creek Watershed Coalition

Effective date

03/01/2016

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT WATER QUALITY CONTROL COMMISSION

5 CCR 1002-36

REGULATION NO. 36 CLASSIFICATIONS AND NUMERIC STANDARDS FOR RIO GRANDE BASIN

36.1 **AUTHORITY**

These regulations are promulgated pursuant to section 25-8-101 et seq. C.R.S., as amended, and in particular, 25-8-203 and 25-8-204.

36.2 PURPOSE

These regulations establish classifications and numeric standards for the Rio Grande Basin, including all tributaries and standing bodies of water as indicated in section 36.6. The classifications identify the actual beneficial uses of the water. The numeric standards are assigned to determine the allowable concentrations of various parameters. Discharge permits will be issued by the Water Quality Control Division to comply with basic, narrative, and numeric standards and control regulations so that all discharges to waters of the state protect the classified uses. (See Regulation No. 31, section 31.14). It is intended that these and all other stream classifications and numeric standards be used in conjunction with and be an integral part of Regulation No. 31 Basic Standards and Methodologies for Surface Water.

36.3 INTRODUCTION

These regulations and tables present the classifications and numeric standards assigned to stream segments listed in the attached tables (See section 36.6(4)). As additional stream segments are classified and numeric standards for designated parameters are assigned for this drainage system, they will be added to or replace the numeric standards in the tables in section 36.6(4). Any additions or revisions of classifications or numeric standards can be accomplished only after public hearing by the Commission and proper consideration of evidence and testimony as specified by the statute and the "basic regulations".

36.4 **DEFINITIONS**

See the Colorado Water Quality Control Act and the codified water quality regulations for definitions.

36.5 BASIC STANDARDS

(1) <u>TEMPERATURE</u>

All waters of the Rio Grande Basin are subject to the following standard for temperature. (Discharges regulated by permits, which are within the permit limitations, shall not be subject to enforcement proceedings under this standard.) Temperature shall maintain a normal pattern of diurnal and seasonal fluctuations with no abrupt changes and shall have no increase in temperature of a magnitude, rate, and duration deemed deleterious to the resident aquatic life. This standard shall not be interpreted or applied in a manner inconsistent with section 25-8-104, C.R.S.

(2) **QUALIFIERS**

See Basic Standards and Methodologies for Surface Water for a listing of organic standards at 31.11 and metal standards found at 31.16 Table III. The column in the tables headed "Water + Fish" are presumptively applied to all aquatic life class 1 streams which also have a water supply classification, and are applied to aquatic life class 2 streams which also have a water supply classification, on a case-by-case basis as shown in the Tables 36.6(4). The column in the tables at 31.11 and 31.16 Table III headed "Fish Ingestion" is presumptively applied to all aquatic life class 1 streams which do not have a water supply classification, and are applied to aquatic life class 2 streams which do not have a water supply classification, on a case-by-case basis as shown in Tables 36.6(4).

(3) **URANIUM**

- (a) All waters of the Rio Grande Basin are subject to the following basic standard for uranium, unless otherwise specified by a water quality standard applicable to a particular segment. However, discharges of uranium regulated by permits which are within these permit limitations shall not be a basis for enforcement proceedings under this basic standard.
- (b) Uranium level in surface waters shall be maintained at the lowest practicable level.
- (c) In no case shall uranium levels in waters assigned a water supply classification be increased by any cause attributable to municipal, industrial, or agricultural discharges so as to exceed 16.8-30 µg/l or naturally-occurring concentrations (as determined by the State of Colorado), whichever is greater.
 - (i) The first number in the 16.8-30 ug/l range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

(4) <u>NUTRIENTS</u>

Prior to May 31, 2022, interim nutrient values will be considered for adoption only in the limited circumstances defined at 31.17(e). These circumstances include headwaters, Direct Use Water Supply (DUWS) Lakes and Reservoirs, and other special circumstances determined by the Commission. Additionally, prior to May 31, 2017, only total phosphorus and chlorophyll *a* will be considered for adoption. After May 31, 2017, total nitrogen will be considered for adoption per the circumstances outlined in 31.17(e).

Prior to May 31, 2022, nutrient criteria will be adopted for headwaters on a segment by segment basis for the Rio Grande River Basin. Moreover, pursuant to 31.17(e) nutrient standards will only be adopted for waters upstream of all permitted domestic wastewater treatment facilities discharging prior to May 31, 2012 or with preliminary effluent limits requested prior to May 31, 2012, and any non-domestic facilities subject to Regulation 85 effluent limits and discharging prior to May 31, 2012. The following is a list of all permitted domestic wastewater treatment facilities

discharging prior to May 31, 2012 or with preliminary effluent limits requested prior to May 31, 2012, and any non-domestic facilities subject to Regulation 85 effluent limits and discharging prior to May 31, 2012 in the Rio Grande River Basin:

Segment	Permittee	Facility name	Permit No.

CORGCB03	Baca Grande Water and Sanitation District	Aspen Institute	CO0046914

Prior to May 31, 2022:

- For segments located entirely above these facilities, nutrient standards apply to the entire segment.
- For segments with portions downstream of these facilities, *nutrient standards only apply above these facilities*. A footnote was added to the total phosphorus and chlorophyll a standards in these segments. The footnote references the table of qualified facilities at 36.5(4).
- For segments located entirely below these facilities, nutrient standards do not apply.

A footnote was added to the total phosphorus and chlorophyll *a* standards in lakes segments as nutrients standards apply only to lakes and reservoirs larger than 25 acres surface area.

36.6 TABLES

(1) <u>Introduction</u>

The numeric standards for various parameters in this regulation and in the tables in Appendix 36-1 were assigned by the Commission after a careful analysis of the data presented on actual stream conditions and on actual and potential water uses.

Numeric standards are not assigned for all parameters listed in the tables attached to Regulation No. 31. If additional numeric standards are found to be needed during future periodic reviews, they can be assigned by following the proper hearing procedures.

(2) Abbreviations

(a) The following abbreviations are used in this regulation and in the tables in Appendix 36-1:

°C = degrees Celsius

CL = cold lake temperature tier

CLL = cold large lake temperature tier

CS-I = cold stream temperature tier one

CS-II = cold stream temperature tier two

D.O. = dissolved oxygen

DM = daily maximum temperature DUWS = direct use water supply

E. coli = Escherichia coli mg/l = milligrams per liter

MWAT = maximum weekly average temperature

OW = outstanding waters

sp = spawning

SSE = site-specific equation T = total recoverable

t = total tr = trout

TVS = table value standard ug/l = micrograms per liter UP = use-protected

WAT = weekly average temperature

WS = water supply

WS-I = warm stream temperature tier one WS-II = warm stream temperature tier two WS-III = warm stream temperature tier three

WL = warm lake temperature tier

(b) In addition, the following abbreviations are used:

Fe(ch) = WS Mn(ch) = WS $SO_4 = WS$

These abbreviations mean: For all surface waters with an actual water supply use, the less restrictive of the following two options shall apply as numerical standards, as specified in the Basic Standards and Methodologies at 31.11(6);

i. existing quality as of January 1, 2000; or

ii. Iron = 300 (μ g/l (dissolved) Manganese = 50 (μ g/l (dissolved)

 $SO_4 = 250 \text{ mg/l}$

For all surface waters with a "water supply" classification that are not in actual use as a water supply, no water supply standards are applied for iron, manganese or sulfate, unless the Commission determines as the result of a site-specific rulemaking hearing that such standards are appropriate.

- (c) Temporary Modification for Water + Fish Chronic Arsenic Standard
 - (i) The temporary modification for chronic arsenic standards applied to segments with an arsenic standard of 0.02 μ g/l that has been set to protect the Water+Fish qualifier is listed in the temporary modification and qualifiers column as As(ch)=hybrid.

- (ii) For discharges existing on or before 6/1/2013, the temporary modification is: As(ch)=current condition, expiring on 12/31/2021.
- (iii) For new or increased discharges commencing on or after 6/1/2013, the temporary modification is: As(ch)=0.02-3.0 μg/l (Trec), expiring on 12/31/2021.
 - (a) The first number in the range is the health-based water quality standard previously adopted by the Commission for the segment.
 - (b) The second number in the range is a technology based value established by the Commission for the purpose of this temporary modification.
 - (c) Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-ofpipe" discharge level more restrictive than the second number in the range.

(3) <u>Table Value Standards</u>

In certain instances in the tables in Appendix 36-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

	TABLE VALUE STANDARDS (Concentrations in μg/l unless noted)
PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (Trec)	Acute = $e^{(1.3695[ln(hardness)]+1.8308)}$
	pH equal to or greater than 7.0
	Chronic=e ^{(1.3695[ln(hardness)]-0.1158)}
	pH less than 7.0
	Chronic= $e^{(1.3695[ln(hardness)]-0.1158)}$ or 87, whichever is more stringent
Ammonia (4)	Cold Water
	$acute = \frac{0.275}{1+10^{7.204-pH}} + \frac{39.0}{1+10^{pH-7.204}}$
	$chronic = \begin{bmatrix} \frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}} \end{bmatrix} * MIN (2.85, 1.45*10^{0.028(25-T)})$
	Warm Water

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the commission on a site-specific basis where appropriate evidence is submitted.
- (5) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of hexavalent and trivalent chromium exceed the water supply standard of 50 ug/l total chromium in those waters classified for domestic water use.
- (6) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.

- (7) *E.coli* criteria and resulting standards for individual water segments, are established as indicators of the potential presence of pathogenic organisms. Standards for *E. coli* are expressed as a two-month geometric mean. Site-specific or seasonal standards are also two-month geometric means unless otherwise specified.
- (8) All phosphorus standards are based upon the concentration of total phosphorus.
- (9) The pH standards of 6.5 (or 5.0) and 9.0 are an instantaneous minimum and maximum, respectively to be applied as effluent limits. In determining instream attainment of water quality standards for pH, appropriate averaging periods may be applied, provided that beneficial uses will be fully protected.

(4) Additional Site-Specific Criteria

(a) Seasonal Aluminum Standards for Alamosa River/La Jara Creek/Conejos River Segment 8, Terrace Reservoir:

5/1-6/30 Near Surface:

Aluminum(chronic)=873(T) ug/L Aluminum(acute)=TVS(T) ug/L Aluminum(chronic)=59 ug/L Aluminum(acute)=159 ug/L

5/1-6/30 Near Bottom:

Aluminum(chronic)=1,542(T) ug/L Aluminum(acute)=5,583(T) ug/L Aluminum(chronic)=41 ug/L Aluminum(acute)=65 ug/L

7/1-4/30 Near Surface:

Aluminum(chronic)=102(T) ug/L Aluminum(acute)=TVS(T) ug/L Aluminum(chronic)=9 ug/L Aluminum(acute)=15 ug/L

7/1-4/30 Near Bottom:

Aluminum(chronic)=227(T) ug/L Aluminum(acute)= TVS(T) ug/L Aluminum(chronic)=9 ug/L Aluminum(acute)=12 ug/L

(b) Site-Specific Standards for Rio Grande Segment 4a:

Standards effective through 12/31/2016

Cadmium(acute)=TVS(tr)
Cadmium(chronic)=TVS
Lead(chronic)=TVS
Manganese(chronic)=TVS and WS
Zinc(acute/chronic)=TVS

Tier 1 standards effective 1/1/2017 through 12/31/2018

Low flow (August-March):
Cadmium(acute/chronic)=2.6 / 1.5 ug/L
Lead(chronic)=3.0 ug/L
Manganese(chronic)=165 ug/L
Zinc(acute/chronic)=548 / 393 ug/L

High flow (April-July):
Cadmium(acute/chronic)=1.0 / 0.63 ug/L
Lead(chronic)=1.3 ug/L
Manganese(chronic)=WS
Zinc(acute/chronic)=272 / 183 ug/L

Tier 2 standards effective from 1/1/2019

Low flow (August-March):
Cadmium(acute/chronic)=2.0 / 0.88 ug/L
Lead(chronic)=1.5 ug/L
Manganese(chronic)=92 ug/L
Zinc(acute/chronic)=306 / 148 ug/L

High flow (April-July):
Cadmium(acute/chronic)=0.83 / 0.51 ug/L
Lead(chronic)=0.75 ug/L
Manganese(chronic)=WS
Zinc(acute/chronic)=225 / 136 ug/L

(c) Site-specific standards and temporary modifications for Rio Grande Segment 7:

Standards effective through 12/31/2016

Cadmium(acute/chronic)=TVS Copper(acute/chronic)=TVS Lead(acute/chromium)=TVS Manganese(acute/chronic)=TVS Silver(acute)=TVS Zinc(acute/chronic)=TVS

Tier 1 standards effective 1/1/2017 through 12/31/2018

West Willow

Cadmium(acute/chronic)=163 / 21 ug/L Copper(acute/chronic)=227 / 8.9 ug/L Lead(acute/chromium)=1,014 / 104 ug/L Manganese(acute/chronic)=TVS Silver(acute)=1.3 ug/L Zinc(acute/chronic)=24,000 / 5,977 ug/L

Windy Gulch

Cadmium(acute/chronic)=9.1 / 6.3 ug/L Copper(acute/chronic)=TVS / 5.8 ug/L Lead(acute/chromium)=TVS Manganese(acute/chronic)=TVS Silver(acute)=TVS Zinc(acute/chronic)=2,804 / 1,914 ug/L

Willow mainstem

Low flow (August-March): Cadmium(acute/chronic)=17.5 / 15.4 ug/L Copper(acute/chronic)=TVS Lead(acute/chromium)=TVS / 30 ug/L Manganese(acute/chronic)=TVS Silver(acute)=TVS Zinc(acute/chronic)=4,541 / 3,917 ug/L

Silver(acute)=TVS
Zinc(acute/chronic)=3,635 / 2,373 ug/L

The following temporary modifications apply (Expiration Date 12/31/2016):

West Willow

Cadmium(acute)=163 ug/L
Cadmium(chronic)=21.2 ug/L
Copper(acute)=227 ug/L
Copper(chronic)=8.9 ug/L
Lead(acute)=1,014 ug/L
Lead(chronic)=104 ug/L
Silver(acute)=1.32 ug/L
Zinc(acute)=24,000 ug/L
Zinc(chronic)=59,77 ug/L

Windy Gulch

Cadmium(acute)=9.1 ug/L Cadmium(chronic)=6.3 ug/L Copper(chronic)=5.8 ug/L Zinc(acute)=2,804 ug/L Zinc(chronic)=1,914 ug/L

Willow

Cadmium(acute)=30.8 ug/L Cadmium(chronic)=17.9 ug/L Copper(acute)=6.4 ug/L Copper(chronic)=5.6 ug/L Lead(acute)=38.0 ug/L Lead(chronic)=31.3 ug/L Zinc(acute)=6,763 ug/L Zinc(chronic)=4,660 ug/L

(5) <u>Stream Classifications and Water Quality Standards Tables</u>

The stream classifications and water quality standards tables in Appendix 36-1 are incorporated herein by reference.

. . . .

36.37 STATEMENT OF BASIS AND PURPOSE REGARDING THE ADOPTION OF NON-SUBSTANTIVE CHANGES TO THE CLASSIFICATION AND NUMEIRC STANDARDS FOR RIO GRANDE BASIN, JANUARY 11, 2016 RULEMAKING; EFFECTIVE DATE MARCH 1, 2016

The provisions of C.R.S. 25-8-202(1)(i) and 25-8-401(2) provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

The Commission, in a public rulemaking hearing adopted extensive changes to the format of this regulation. The Commission does not intend to change any existing designations, use classifications or standards, or the implementation of any standards as the results of changing the format.

This rulemaking was in response to longstanding issues with managing the information contained in the standards tables. The changes made in this hearing reflect a change from storing the information in word processing documents to storing the information in a relational database. This change in platform will provide better consistency, facilitate error checking as well as a more readable format for the standards tables. Storing the information in a database allows it to be used more efficiently by other programs in the Division.

While it was the Commission's intent not to change the substantive meaning of the regulations in this rulemaking, in cases where there was ambiguity the revised regulation reflects the Commission's interpretation of the previous format based on Regulation #31 (the Basic Standards and Methodologies for Surface Water) and the experience of the Commission and its staff.

Overall format changes: The new format displays parameters by name, rather than by period table element abbreviations. The section formerly titled "Temporary Modifications and Qualifiers" does not appear in the new format. Instead, there is a separate section for qualifiers, and an "Other" section. Temporary modifications, variances and other footnotes are displayed in the "Other" section. Many items that were formerly in the "Temporary Modifications and Qualifiers" column will be displayed in the "Other" column and will have a different appearance or modified wording, although the information is substantively the same. Each footnote in the "Other" section is preceded by a heading that indicates where the footnote applies:

- Footnotes regarding a use classification will begin with the heading "Classification..."
- Footnotes regarding the antidegradation designation begin with the heading "Designation..."
- Footnotes that relate to a particular standard begin with the name of the parameter, for example "Selenium(chronic)= ..."

Also, since there is more room for information within each segment, footnotes "B" and "C" were replaced with the full text in each segment where these footnotes were applied. Footnote "A" was maintained because the text is too long to be displayed in the "Other" section for each segment where it applies.

Constraints of the new format: Some adjustments were made to the way that data is displayed in order to be compatible with the functions of the Standards Database. Database organization requires that information which relates to multiple standards must be attached to each individual parameter. For example, a segment with a temporary modification listed for "all parameters" in the old format will have a temporary modification listed for each individual parameter in the new format. There are also spacing constraints in the new format, which require some information to be moved either to the "other" box on the new format, or moved out of the segment entirely and into another location in the regulation.

<u>Clarification of changes</u>: The shift to a database organizational structure required consistency in the way each data element is addressed. To insure that data is stored and displayed correctly, the following changes were made

- The "type" of temporary modification is no longer displayed in the segment tables, since they have no regulatory effect and have been inconsistently displayed.
- In the old format, waters that had a reviewable antidegradation designation were identified by the absence of either "UP" or "OW" in the designation column. These segments now display the word "reviewable" under the designation heading. There needed to be a value in the designation column for every segment.

- Dissolved standards are not specifically noted as dissolved in the new format. All metals standards are dissolved unless noted with a "T" or a "t". For example, a manganese standard in the old format of "WS(dis") is displayed as "WS" in the new format.
- A new footnote 7 was added to clarify that although E. coli is listed in the "chronic" column, the standard is a two-month geometric mean rather than a 30-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 7.
- A new footnote 8 was added to indicate that all phosphorus standards are based upon the concentration of total phosphorus. In the old format, individual phosphorus standards were noted as "total" in some basins and not others.
- A new footnote 9 was added to clarify that although pH is listed in the "acute" column, the standard is not applied as a 1-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 3.
- Physical and Biological Parameters: Some parameters are not specifically identified in the old format segment tables as acute or chronic. The new format requires that each parameter is placed in either the acute or chronic column. Specifically, these parameters and the basis for being identified as acute or chronic are as follows:
 - pH (acute) Regulation #31, Table 1, footnote 3
 - E. Coli (chronic) Regulation #31, Table 1, footnote 7
 - D.O. (chronic) Regulation #31, Table 1, footnote 1
 - cyanide (acute) Regulation #31, Table 2
 - sulfide (chronic) Regulation #31, Table 2
 - nitrate (acute) Regulation #31, Table 2
 - nitrite (chronic) not specified in Regulation #31. Nitrite has been implemented as a 30day average standard in permits and assessments.
 - chloride (chronic) Regulation #31, Table 2
 - boron (chronic) Regulation #31, Table 2
 - sulfate (chronic) Regulation #31, Table 2
- Some site-specific standards had too much information to be contained in the new table, so it was moved to 36.6(4) (Alamosa River/La Jara Creek/Conejos River Segment 8 and Rio Grande Segments 4a and 7).

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT WATER QUALITY CONTROL COMMISSION

5 CCR 1002-36

REGULATION NO. 36
CLASSIFICATIONS AND NUMERIC STANDARDS
FOR
RIO GRANDE BASIN

APPENDIX 36-1
Stream Classifications and Water Quality Standards Tables

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS - FOOTNOTES

A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

. . . .

36.6 TABLES

. . . .

(4) Additional Site-Specific Criteria

. . . .

(b) Site-Specific Standards for Rio Grande Segment 4a:

Standards effective through 12/31/2018

Cadmium(acute)=TVS(tr)
Cadmium(chronic)=TVS
Lead(chronic)=TVS
Manganese(chronic)=TVS and WS
Zinc(acute/chronic)=TVS

Tier 1 standards effective 1/1/2019 through 12/31/2020

Low flow (August-March):
Cadmium(acute/chronic)=2.6 / 1.5 ug/L
Lead(chronic)=3.0 ug/L
Manganese(chronic)=165 ug/L
Zinc(acute/chronic)=548 / 393 ug/L

High flow (April-July):
Cadmium(acute/chronic)=1.0 / 0.63 ug/L
Lead(chronic)=1.3 ug/L
Manganese(chronic)=WS
Zinc(acute/chronic)=272 / 183 ug/L

Tier 2 standards effective from 1/1/2021

Low flow (August-March):
Cadmium(acute/chronic)=2.0 / 0.88 ug/L
Lead(chronic)=1.5 ug/L
Manganese(chronic)=92 ug/L
Zinc(acute/chronic)=306 / 148 ug/L

High flow (April-July):
Cadmium(acute/chronic)=0.83 / 0.51 ug/L
Lead(chronic)=0.75 ug/L
Manganese(chronic)=WS
Zinc(acute/chronic)=225 / 136 ug/L

(c) Site-specific standards and temporary modifications for Rio Grande Segment 7:

Standards effective through 12/31/2018

Cadmium(acute/chronic)=TVS Copper(acute/chronic)=TVS Lead(acute/chromium)=TVS Manganese(acute/chronic)=TVS Silver(acute)=TVS Zinc(acute/chronic)=TVS

Tier 1 standards effective 1/1/2019 through 12/31/2020

West Willow

Cadmium(acute/chronic)=163 / 21 ug/L Copper(acute/chronic)=227 / 8.9 ug/L Lead(acute/chromium)=1,014 / 104 ug/L Manganese(acute/chronic)=TVS Silver(acute)=1.3 ug/L Zinc(acute/chronic)=24,000 / 5,977 ug/L

Windy Gulch

Cadmium(acute/chronic)=9.1 / 6.3 ug/L Copper(acute/chronic)=TVS / 5.8 ug/L Lead(acute/chromium)=TVS Manganese(acute/chronic)=TVS Silver(acute)=TVS Zinc(acute/chronic)=2,804 / 1,914 ug/L

Willow mainstem

Low flow (August-March):
Cadmium(acute/chronic)=17.5 / 15.4 ug/L
Copper(acute/chronic)=TVS
Lead(acute/chromium)=TVS / 30 ug/L
Manganese(acute/chronic)=TVS
Silver(acute)=TVS
Zinc(acute/chronic)=4,541 / 3,917 ug/L

High flow (April-July):
Cadmium(acute/chronic)=15.6 / 10.3 ug/L
Copper(acute/chronic)=TVS
Lead(acute/chromium)=TVS / 22 ug/L
Manganese(acute/chronic)=TVS
Silver(acute)=TVS
Zinc(acute/chronic)=4,190 / 3,009 ug/L

Tier 2 standards effective from 1/1/2021

36.38 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 14, 2015 RULEMAKING; FINAL ACTION JANUARY 11, 2016; EFFECTIVE DATE JUNE 30, 2016

The provisions of C.R.S. 25-8-202(1)(i) and 25-8-401(2) provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Pursuant to the requirements in the Basic Standards (at 31.7(3)), the Commission reviewed the status of temporary modifications scheduled to expire before December 31, 2017, to determine whether the temporary modification should be modified, eliminated or extended. In addition, other standards actions were taken.

Rio Grande segments 4a and 7: Metals, revised standards effective dates and temporary modifications expiration dates.

At the December 2013 Temporary Modification hearing the Commission adopted site specific standards with delayed effective dates and temporary modifications in Rio Grande segments 4a and 7. These standards represent predicted improvements in water quality due to the dilution effect of treated effluent from the Bulldog Mine in Tier 1 and water-quality improvement predicted by a 90% reduction in flow and metal load from the Nelson Tunnel, and a predicted 50% reduction in metal load from the Solomon Mine, in addition to dilution from treated effluent from the Bulldog Mine in Tier 2. The adopted site-specific standards are intended to set water-quality goals for both segments that reflect the lowest ambient concentrations that are feasible to achieve with the 2013 schedule for redevelopment activities. However, Rio Grande Silver presented evidence that implementation of the Rio Grande Silver Bulldog Mine redevelopment project has been delayed two years. As a result, the Commission extended all of the effective dates and expiration dates by two years.

Rio Grande segments 4a and 7: Ammonia.

The Division and the Town of Creede presented evidence that its wastewater treatment facility has a predicted compliance problem with ammonia effluent limits based on water

quality standards in segments 7 and 4a and there is uncertainty regarding the feasibility of meeting the ammonia limits. Creede has submitted a plan to resolve the uncertainty. Based on that plan the Commission adopted a "current conditions" temporary modification to the ammonia standard with an expiration date of 12/31/2018.

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT WATER QUALITY CONTROL COMMISSION

5 CCR 1002-37

REGULATION NO. 37 CLASSIFICATIONS AND NUMERIC STANDARDS FOR LOWER COLORADO RIVER BASIN

37.1 AUTHORITY

These regulations are promulgated pursuant to section 25-8-101 et seq. C.R.S., as amended, and in particular, 25-8-203 and 25-8-204.

37.2 PURPOSE

These regulations establish classifications and numeric standards for the Colorado River Basin, including all tributaries and standing bodies of water. This includes all or parts of Garfield, Mesa, Rio Blanco, Moffat and Routt Counties. The classifications identify the actual beneficial uses of the water. The numeric standards are assigned to determine the allowable concentrations of various parameters. Discharge permits will be issued by the Water Quality Control Division to comply with basic, narrative, and numeric standards and control regulations so that all discharges to waters of the state protect the classified uses. (See Regulation No. 31, section 31.14). It is intended that these and all other stream classifications and numeric standards be used in conjunction with and be an integral part of Regulation No. 31 Basic Standards and Methodologies for Surface Water.

37.3 INTRODUCTION

These regulations and tables present the classifications and numeric standards assigned to stream segments listed in the attached tables (see section 37.6). As additional stream segments are classified and numeric standards for designated parameters are assigned for this drainage system, they will be added to or replace the numeric standards in the tables in section 37.6. Any additions or revisions of classifications or numeric standards can be accomplished only after public hearing by the Commission and proper consideration of evidence and testimony as specified by the statute and the "basic regulations".

37.4 **DEFINITIONS**

See the Colorado Water Quality Control Act and the codified water quality regulations for definitions.

37.5 BASIC STANDARDS

(1) <u>TEMPERATURE</u>

All waters of the Colorado River Basin are subject to the following standard for temperature. (Discharges regulated by permits, which are within the permit limitations, shall not be subject to enforcement proceedings under this standard). Temperature shall maintain a normal pattern of diurnal and seasonal fluctuations with no abrupt changes and shall have no increase in temperature of a magnitude, rate, and duration deemed deleterious to the resident aquatic life. This standard shall not be interpreted or applied in a manner inconsistent with section 25-8-104, C.R.S.

(2) QUALIFIERS

See Basic Standards and Methodologies for Surface Water for a listing of organic standards at 31.11 and metal standards found at 31.16 Table III. The column in the tables headed "Water + Fish" are presumptively applied to all aquatic life class 1 streams which also have a water supply classification, and are applied to aquatic life class 2 streams which also have a water supply classification, on a case-by-case basis as shown in the Tables 37.6. The column in the tables at 31.11 headed "Fish Ingestion" is presumptively applied to all aquatic life class 1 streams which do not have a water supply classification, and are applied to aquatic life class 2 streams which do not have a water supply classification, on a case-by-case basis as shown in Tables 37.6.

(3) URANIUM

- (a) All waters of the Lower Colorado River Basin, are subject to the following basic standard for uranium, unless otherwise specified by a water quality standard applicable to a particular segment. However, discharges of uranium regulated by permits which are within these permit limitations shall not be a basis for enforcement proceedings under this basic standard.
- (b) Uranium level in surface waters shall be maintained at the lowest practicable level.
- (c) In no case shall uranium levels in waters assigned a water supply classification be increased by any cause attributable to municipal, industrial, or agricultural discharges so as to exceed 16.8-30 ug/l or naturally-occurring concentrations (as determined by the State of Colorado), whichever is greater.
 - (i) The first number in the 16.8-30 ug/l range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

(4) NUTRIENTS

Prior to May 31, 2022, interim nutrient values will be considered for adoption only in the limited circumstances defined at 31.17(e). These circumstances include headwaters, Direct Use Water Supply (DUWS) Lakes and Reservoirs, and other special circumstances determined by the Commission. Additionally, prior to May 31, 2017, only total phosphorus and chlorophyll *a* will be considered for adoption. After May 31, 2017, total nitrogen will be considered for adoption per the circumstances outlined in 31.17(e).

Prior to May 31, 2022, nutrient criteria will be adopted for headwaters on a segment by segment basis for the Lower Colorado Basin. Moreover, pursuant to 31.17(e) nutrient standards will only be adopted for waters upstream of all permitted domestic wastewater treatment facilities discharging prior to May 31, 2012 or with preliminary effluent limits requested prior to May 31, 2012, and any non-domestic facilities subject to Regulation 85 effluent limits and discharging prior to May 31, 2012. The following is a list of all permitted domestic wastewater treatment facilities discharging prior to May 31, 2012 or with preliminary effluent limits requested prior to May 31,

2012, and any non-domestic facilities subject to Regulation 85 effluent limits and discharging prior to May 31, 2012 in the Lower Colorado Basin:

Prior to May 31, 2022:

- For segments located entirely above these facilities, nutrient standards apply to the entire segment.
- For segments with portions downstream of these facilities, *nutrient standards only apply above these facilities*. A footnote was added to the total phosphorus and chlorophyll *a* standards in these segments. The footnote references the table of qualified facilities at 37.5(4).
- For segments located entirely below these facilities, nutrient standards do not apply.

A footnote was added to the total phosphorus and chlorophyll a standards in lakes segments as nutrients standards apply only to lakes and reservoirs larger than 25 acres surface area.

37.6 TABLES

(1) <u>Introduction</u>

The numeric standards for various parameters in this regulation and in the tables in Appendix 37-1 were assigned by the Commission after a careful analysis of the data presented on actual stream conditions and on actual and potential water uses.

Numeric standards are not assigned for all parameters listed in the tables attached to Regulation No. 31. If additional numeric standards are found to be needed during future periodic reviews, they can be assigned by following the proper hearing procedures.

(2) <u>Abbreviations</u>:

(a) The following abbreviations are used in this regulation and in the tables in Appendix 37-1:

°C = degrees celsius
CL = cold lake temperature tier
CLL = cold large lake temperature tier
CS-I = cold stream temperature tier one
CS-II = cold stream temperature tier two
D.O. = dissolved oxygen

D.O. = dissolved oxygen DM = daily maximum

DUWS = direct use water supply

E.Coli = escherichia coli

mg/l = milligrams per liter

MWAT = maximum weekly average temperature

OW = outstanding waters

sc = sculpin sp = spawning

SSE = site-specific equation

T = total recoverable

t = total

tr = trout

TVS = table value standard ug/l = micrograms per liter UP = use-protected

OP = use-protected

WAT = weekly average temperature
WL = warm lake temperature tier

WS = water supply

WS-I = warm stream temperature tier one
WS-II = warm stream temperature tier two
WS-III = warm stream temperature tier three
WS-IV = warm stream temperature tier four

(b) In addition, the following abbreviations were used:

 $\begin{array}{lll} \text{Fe(ch)} & = & \text{WS} \\ \text{Mn(ch)} & = & \text{WS} \\ \text{SO}_4 & = & \text{WS} \end{array}$

These abbreviations mean: For all surface waters with an actual water supply use, the less restrictive of the following two options shall apply as numerical standards, as specified in the Basic Standards and Methodologies at 31.16 Table II and III:

(i) existing quality as of January 1, 2000; or

(ii) Iron = 300 ug/l (dissolved)Manganese = 50 ug/l (dissolved) SO_4 = 250 mg/l

For all surface waters with a "water supply" classification that are not in actual use as a water supply, no water supply standards are applied for iron, manganese or sulfate, unless the Commission determines as the result of a site-specific rulemaking hearing that such standards are appropriate.

- (c) Temporary Modification for Water + Fish Chronic Arsenic Standard
 - (i) The temporary modification for chronic arsenic standards applied to segments with an arsenic standard of 0.02 ug/l that has been set to protect the Water+Fish qualifier is listed in the temporary modification and qualifiers column as As(ch)=hybrid.
 - (ii) For discharges existing on or before 6/1/2013, the temporary modification is: As(ch)=current condition, expiring on 12/31/2021.
 - (iii) For new or increased discharges commencing on or after 6/1/2013, the temporary modification is: As(ch)=0.02-3.0 ug/l (Trec), expiring on 12/31/2021.
 - (a) The first number in the range is the health-based water quality standard previously adopted by the Commission for the segment.
 - (b) The second number in the range is a technology based value established by the Commission for the purpose of this temporary modification.
 - (c) Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-ofpipe" discharge level more restrictive than the second number in the range.

(3) <u>Table Value Standards</u>

In certain instances in the tables in Appendix 37-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS (Concentrations in ug/l unless noted)

PARAMETER⁽¹⁾ TABLE VALUE STANDARDS (2)(3)

Aluminum (Trec) Acute = $e^{(1.3695[ln(hardness)]+1.8308)}$ PH equal to or greater than 7.0

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.

- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the Commission on a site-specific basis where appropriate evidence is submitted.
- (5) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 ug/l total chromium in those waters classified for domestic water use.
- (6) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.
- (7) E.coli criteria and resulting standards for individual water segments, are established as indicators of the potential presence of pathogenic organisms. Standards for E. coli are expressed as a two-month geometric mean. Site-specific or seasonal standards are also two-month geometric means unless otherwise specified.
- (8) All phosphorus standards are based upon the concentration of total phosphorus.
- (9) The pH standards of 6.5 (or 5.0) and 9.0 are an instantaneous minimum and maximum, respectively to be applied as effluent limits. In determining instream attainment of water quality standards for pH, appropriate averaging periods may be applied, provided that beneficial uses will be fully protected.

(4) Assessment Criteria

The following criteria shall be used when assessing whether a specified waterbody is in attainment of the specified standard.

(a) White River Segment 13b Selenium Assessment Thresholds and Locations

Corral Gulch, Se(ch)=5.7 ug/l

Assessment location: Corral Gulch at the mouth.

Duck Creek, Se(ch)=7.9 ug/l

Assessment location: Duck Creek at the mouth.

Yellow Creek, Se(ch)=6.9 ug/l

Assessment location: Yellow Creek upstream from the confluence with Barcus Creek.

Greasewood Creek, Se(ch)=6.0 ug/l

Assessment location: Greasewood Creek at the mouth.

(b) White River Segment 13c Iron Assessment Threshold and Location

Yellow Creek, Fe(ch)=1625 ug/l

Assessment location: Yellow Creek at the mouth.

(5) <u>Stream Classifications and Water Quality Standards Tables</u>

The stream classifications and water quality standards tables in Appendix 37-1 are incorporated herein by reference.

. . . .

37.35 STATEMENT OF BASIS AND PURPOSE REGARDING THE ADOPTION OF NON-SUBSTANTIVE CHANGES TO THE CLASSIFICATION AND NUMEIRC STANDARDS FOR LOWER COLORADO RIVER BASIN, JANUARY 11, 2016 RULEMAKING; EFFECTIVE DATE MARCH 1, 2016

The provisions of C.R.S. 25-8-202(1)(i) and 25-8-401(2) provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

The Commission, in a public rulemaking hearing adopted extensive changes to the format of this regulation. The Commission does not intend to change any existing designations, use classifications or standards, or the implementation of any standards as the results of changing the format.

This rulemaking was in response to longstanding issues with managing the information contained in the standards tables. The changes made in this hearing reflect a change from storing the information in word processing documents to storing the information in a relational database. This change in platform will provide better consistency, facilitate error checking as well as a more readable format for the standards tables. Storing the information in a database allows it to be used more efficiently by other programs in the Division.

While it was the Commission's intent not to change the substantive meaning of the regulations in this rulemaking, in cases where there was ambiguity the revised regulation reflects the Commission's interpretation of the previous format based on Regulation #31 (the Basic Standards and Methodologies for Surface Water) and the experience of the Commission and its staff.

Overall format changes: The new format displays parameters by name, rather than by period table element abbreviations. The section formerly titled "Temporary Modifications and Qualifiers" does not appear in the new format. Instead, there is a separate section for qualifiers, and an "Other" section. Temporary modifications, variances and other footnotes are displayed in the "Other" section. Many items that were formerly in the "Temporary Modifications and Qualifiers" column will be displayed in the "Other" column and will have a different appearance or modified wording, although the information is substantively the same. Each footnote in the "Other" section is preceded by a heading that indicates where the footnote applies:

- Footnotes regarding a use classification will begin with the heading "Classification..."
- Footnotes regarding the antidegradation designation begin with the heading "Designation..."
- Footnotes that relate to a particular standard begin with the name of the parameter, for example "Selenium(chronic)= ..."

Also, since there is more room for information within each segment, footnotes "B" and "C" were replaced with the full text in each segment where these footnotes were applied. Footnote "A" was maintained because the text is too long to be displayed in the "Other" section for each segment where it applies. Footnote "D" was changed to footnote "B" and was maintained because the text is too long to be displayed in the "Other" section.

<u>Constraints of the new format</u>: Some adjustments were made to the way that data is displayed in order to be compatible with the functions of the Standards Database. Database organization requires that information which relates to multiple standards must be attached to each individual parameter. For example, a segment with a temporary modification listed for "all parameters" in the old format will have a

temporary modification listed for each individual parameter in the new format. There are also spacing constraints in the new format, which require some information to be moved either to the "other" box on the new format, or moved out of the segment entirely and into another location in the regulation.

<u>Clarification of changes</u>: The shift to a database organizational structure required consistency in the way each data element is addressed. To insure that data is stored and displayed correctly, the following changes were made

- The "type" of temporary modification is no longer displayed in the segment tables, since they have no regulatory effect and have been inconsistently displayed.
- In the old format, waters that had a reviewable antidegradation designation were identified by the absence of either "UP" or "OW" in the designation column. These segments now display the word "reviewable" under the designation heading. There needed to be a value in the designation column for every segment.
- Dissolved standards are not specifically noted as dissolved in the new format. All metals standards are dissolved unless noted with a "T" or a "t". For example, a manganese standard in the old format of "WS(dis") is displayed as "WS" in the new format.
- A new footnote 7 was added to clarify that although E. coli is listed in the "chronic" column, the standard is a two-month geometric mean rather than a 30-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 7.
- A new footnote 8 was added to indicate that all phosphorus standards are based upon the concentration of total phosphorus. In the old format, individual phosphorus standards were noted as "total" in some basins and not others.
- A new footnote 9 was added to clarify that although pH is listed in the "acute" column, the standard is not applied as a 1-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 3.
- Physical and Biological Parameters: Some parameters are not specifically identified in the old format segment tables as acute or chronic. The new format requires that each parameter is placed in either the acute or chronic column. Specifically, these parameters and the basis for being identified as acute or chronic are as follows:
 - pH (acute) Regulation #31, Table 1, footnote 3
 - E. Coli (chronic) Regulation #31, Table 1, footnote 7
 - D.O. (chronic) Regulation #31, Table 1, footnote 1
 - cyanide (acute) Regulation #31, Table 2
 - sulfide (chronic) Regulation #31, Table 2
 - nitrate (acute) Regulation #31, Table 2
 - nitrite (chronic) not specified in Regulation #31. Nitrite has been implemented as a 30day average standard in permits and assessments.
 - chloride (chronic) Regulation #31, Table 2
 - boron (chronic) Regulation #31, Table 2

• sulfate (chronic) Regulation #31, Table 2

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS - FOOTNOTES

- A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- B) Assessment of adequate refuge shall rely on the Cold Large Lake table value temperature criterion and applicable dissolved oxygen standard rather than the site-specific temperature standard.

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT WATER QUALITY CONTROL COMMISSION

5 CCR 1002-37

REGULATION NO. 37 CLASSIFICATIONS AND NUMERIC STANDARDS FOR LOWER COLORADO RIVER BASIN

. . . .

37.36 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 14, 2015 RULEMAKING; FINAL ACTION JANUARY 11, 2016; EFFECTIVE DATE JUNE 30, 2016

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Pursuant to the requirements in the Basic Standards (at 31.7(3)), the Commission reviewed the status of temporary modifications scheduled to expire before December 31, 2017, to determine whether the temporary modification should be modified, eliminated or extended. Temporary modifications of standards on one segment was reviewed.

Lower Colorado segment 4e: Temporary modifications of the copper and iron standards. Tristate Generation and Transmission, Inc. provided evidence that it is making progress on the plan for eliminating the need for the temporary modification and on resolving the uncertainty regarding the underlying standards. The Commission made no change to the expiration date of 6/30/2017 for copper, and 12/31/2017 for iron as the time allotment was deemed adequate.

WATER QUALITY CONTROL COMMISSION

5 CCR 1002-38

REGULATION NO. 38 CLASSIFICATIONS AND NUMERIC STANDARDS FOR SOUTH PLATTE RIVER BASIN, LARAMIE RIVER BASIN REPUBLICAN RIVER BASIN, SMOKY HILL RIVER BASIN

38.1 **AUTHORITY**

These regulations are promulgated pursuant to section 25-8-101 et seq C.R.S., as amended, and in particular, 25-8-203 and 25-8-204.

38.2 PURPOSE

These regulations establish classification and numeric standards for the South Platte River, the Laramie River, the Republican River and the Smoky Hill River, including all tributaries and standing bodies of water as indicated in section 38.6. The classifications identify the actual beneficial uses of the water. The numeric standards are assigned to determine the allowable concentrations of various parameters. Discharge permits will be issued by the Water Quality Control Division to comply with basic, narrative, and numeric standards and control regulations so that all discharges to waters of the state protect the classified uses. (See section 31.14). It is intended that these and all other stream classifications and numeric standards be used in conjunction with and be an integral part of Regulation 31.0 - BASIC STANDARDS AND METHODOLOGIES FOR SURFACE WATER.

38.3 INTRODUCTION

These regulations and Tables present the classifications and numeric standards assigned to stream segments listed in the attached Tables (See section 38.6). As additional stream segments are classified and numeric standards for this drainage system are adopted, they will be added to or replace the numeric standards in the Tables in section 38.6. Any additions or revisions of classifications or numeric standards can be accomplished only after public hearing by the Commission and proper consideration of evidence and testimony as specified by the statute and the "basic regulations".

38.4 **DEFINITIONS**

See the Colorado Water Quality Control Act and the codified water quality regulations for definitions.

38.5 BASIC STANDARDS

(1) <u>TEMPERATURE</u>

All waters of the South Platte, Laramie, Republican and Smoky Hill River Basins are subject to the following standard for temperature. (Discharges regulated by permits, which are within the permit limitations, shall not be subject to enforcement proceedings under this standard.) Temperature shall maintain a normal pattern of diurnal and seasonal fluctuations with no abrupt changes and shall have no increase in temperature of a magnitude, rate, and duration deemed deleterious to the resident aquatic life. This standard shall not be interpreted or applied in a manner inconsistent with section 25-8-104, C.R.S.

(2) QUALIFIERS

See Basic Standards and Methodologies for Surface Water for a listing of organic standards at 31.11 and metal standards found at 31.16 Table III. The column in the tables headed "Water + Fish" are presumptively applied to all aquatic life class 1 streams which also have a water supply classification, and are applied to aquatic life class 2 streams which also have a water supply classification, on a case-by-case basis as shown in the Tables 38.6. The column in the tables at 31.11 headed "Fish Ingestion" is presumptively applied to all aquatic life class 1 streams which do not have a water supply classification, and are applied to aquatic life class 2 streams which do not have a water supply classification, on a case-by-case basis, as shown in the Tables in 38.6.

(3) <u>URANIUM</u>

- (a) All waters of the South Platte River Basin are subject to the following basic standard for uranium, unless otherwise specified by a water quality standard applicable to a particular segment. However, discharges of uranium regulated by permits which are within these permit limitations shall not be a basis for enforcement proceedings under this basic standard.
- (b) Uranium level in surface waters shall be maintained at the lowest practicable level.
- (c) In no case shall uranium levels in waters assigned a water supply classification be increased by any cause attributable to municipal, industrial, or agricultural discharges so as to exceed 16.8-30 µg/l or naturally-occurring concentrations (as determined by the State of Colorado), whichever is greater.
 - (i) The first number in the 16.8-30 μg/l range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.

(4) <u>NUTRIENTS</u>

Prior to May 31, 2022, interim nutrient values will be considered for adoption only in the limited circumstances defined at 31.17(e). These circumstances include headwaters, Direct Use Water Supply (DUWS) Lakes and Reservoirs, and other special circumstances determined by the Commission. Additionally, prior to May 31, 2017, only total phosphorus and chlorophyll *a* will be considered for adoption. After May 31, 2017, total nitrogen will be considered for adoption per the circumstances outlined in 31.17(e).

Prior to May 31, 2022, nutrient criteria will be adopted for headwaters on a segment by segment basis for the South Platte River Basin. Moreover, pursuant to 31.17(e), nutrient standards will only be adopted for waters upstream of all permitted domestic wastewater treatment facilities discharging prior to May 31, 2012 or with preliminary effluent limits requested prior to May 31, 2012, and any non-domestic facilities subject to Regulation 85 effluent limits and discharging prior to May 31, 2012. The following is a list of all permitted domestic wastewater treatment facilities discharging prior to May 31, 2012 or with preliminary effluent limits requested prior to May 31, 2012, and any non-domestic facilities subject to Regulation 85 effluent limits and discharging prior to May 31, 2012 in the South Platte River Basin:

Prior to May 31, 2022:

- For segments located entirely above these facilities, nutrient standards apply to the entire segment.
- For segments with portions downstream of these facilities, *nutrient standards* only apply above these facilities. A footnote was added to the total phosphorus and chlorophyll a standards in these segments. The footnote references the table of qualified facilities at 38.5(4).
- For segments located entirely below these facilities, nutrient standards do not apply.

A footnote was added to the total phosphorus and chlorophyll *a* standards in lakes segments as nutrients standards apply only to lakes and reservoirs larger than 25 acres surface area.

38.6 TABLES

(1) Introduction

The numeric standards for various parameters in this regulation and in the tables in Appendix 38-1 were assigned by the Commission after a careful analysis of the data presented on actual stream conditions and on actual and potential water uses.

Numeric standards are not assigned for all parameters listed in the Tables attached to 31.0. If additional numeric standards are found to be needed during future periodic reviews, they can be assigned by following the proper hearing procedures.

(2) <u>Abbreviations</u>:

(a) The following abbreviations are used in this regulation and in the tables in Appendix 38-1:

ac = acute (1-day)

°C = degrees celsius

ch = chronic (30-day)

CL = cold lake temperature tier
CLL = cold large lake temperature tier
CS-I = cold stream temperature tier one
CS-II = cold stream temperature tier two

D.O. = Dissolved oxygen
DM = daily maximum
DLIMS = direct use water of

DUWS = direct use water supply

E. coli = Eschericia coli mg/l = milligrams per liter

MWAT = maximum weekly average temperature

OW = outstanding waters

sp = Spawning

SSE = site-specific equation T = total recoverable

t = total tr = trout

TVS = table value standard μg/l = micrograms per liter UP = use-protected

WAT = weekly average temperature
WL = warm lake temperature tier

WS = water supply

WS-I = warm stream temperature tier one WS-II = warm stream temperature tier two WS-III = warm stream temperature tier three

(b) In addition, the following abbreviations are used:

Fe(ch) = WS Mn(ch) = WS $SO_4 = WS$

These abbreviations mean: For all surface waters with an actual water supply use, the less restrictive of the following two options shall apply as numerical standards, as specified in the Basic Standards and Methodologies at 31.11(6);

(i) existing quality as of January 1, 2000; or

(ii) Iron = $300 \mu g/l$ (dissolved) Manganese = $50 \mu g/l$ (dissolved)

 $SO_4 = 250 \text{ mg/l}$

For all surface waters with a "water supply" classification that are not in actual use as a water supply, no water supply standards are applied for iron, manganese or sulfate, unless the Commission determines as the result of a site-specific rulemaking hearing that such standards are appropriate.

- (c) Temporary Modification for Water + Fish Chronic Arsenic Standard
 - (i) The temporary modification for chronic arsenic standards applied to segments with an arsenic standard of 0.02 μg/l that has been set to protect the Water+Fish qualifier is listed in the temporary modification and qualifiers column as As(ch)=hybrid.
 - (ii) For discharges existing on or before 6/1/2013, the temporary modification is: As(ch)=current condition, expiring on 12/31/2021.
 - (iii) For new or increased discharges commencing on or after 6/1/2013, the temporary modification is: As(ch)=0.02-3.0 μg/l (Trec), expiring on 12/31/2021.
 - (a) The first number in the range is the health-based water quality standard previously adopted by the Commission for the segment.
 - (b) The second number in the range is a technology based value established by the Commission for the purpose of this temporary modification.
 - (c) Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-ofpipe" discharge level more restrictive than the second number in the range.

(3) <u>Table Value Standards</u>

In certain instances in the tables in Appendix 38-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS (Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS (2)(3)
Aluminum (T)	Acute = $e^{(1.3695[ln(hardness)]+1.8308)}$
	pH equal to or greater than 7.0
	Chronic=e ^{(1.3695[ln(hardness)]-0.1158)}
	pH less than 7.0
	Chronic= e ^{(1.3695[ln(hardness)]-0.1158)} or 87, whichever is more stringent

Ammonia (4)	Cold Water = (mg/l as N)Total
	0.275 39.0
	$acute = \frac{0.275}{1+10^{7.204-pH}} + \frac{39.0}{1+10^{pH-7.204}}$
	$chronic = \begin{bmatrix} \frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}} \end{bmatrix} * MIN (2.85, 1.45 * 10^{0.028(25-T)})$
	Warm Water = (mg/l as N)Total
	$acute = \frac{0.411}{1+10^{7.204-pH}} + \frac{58.4}{1+10^{pH-7.204}}$
	$chronic \ (Apr 1 - Aug 31) = \begin{bmatrix} \frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}} \end{bmatrix} * MIN \left(2.85, 1.45 * 10^{0.028(25-T)}\right)$
	$chronic (Sep 1 - Mar 31) = \begin{bmatrix} \frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}} \end{bmatrix} * 1.45 * 10^{0.028*(25-MAX(T, 7))}$
Cadmium	Acute = $(1.136672-[ln(hardness) \times (0.041838)])*e^{(0.9151[ln(hardness)]-3.1485)}$
	Acute(Trout) = $(1.136672-[ln(hardness) \times (0.041838)])*e^{(0.9151[ln(hardness)]-3.6236)}$
	Chronic = $(1.101672-[ln(hardness) \times (0.041838)])*e^{(0.7998[ln(hardness)]-4.4451)}$
Chromium III ⁽⁵⁾	Acute = $e^{(0.819[ln(hardness)]+2.5736)}$
	Chronic = $e^{(0.819[ln(hardness)]+0.5340)}$
Chromium VI ⁽⁵⁾	Acute = 16
Chiomidin Vi	
	Chronic = 11
Copper	Acute = $e^{(0.9422[ln(hardness)]-1.7408)}$
	Chronic = $e^{(0.8545[ln(hardness)]-1.7428)}$
Lead	Acute = $(1.46203-[ln(hardness)*(0.145712)])*e^{(1.273[ln(hardness)]-1.46)}$
	Chronic = (1.46203-[(In hardness)* (0.145712)])*e ^{(1.273[In(hardness)]-4.705)}
Manganese	Acute= e ^{(0.3331[in(hardness)]+6.4676)}
Manganese	
	Chronic= e ^{(0.3331[ln(hardness)]+5.8743)}
Nickel	Acute = $e^{(0.846[ln(hardness)]+2.253)}$
	Chronic = $e^{(0.846[ln(hardness)]+0.0554)}$
Selenium ⁽⁶⁾	Acute = 18.4
	Chronic = 4.6
Silver	Acute = $\frac{1}{2}$ e ^{(1.72[ln(hardness)]-6.52)}
	ı

	Chronic = e ^{(1.72}

	Chronic = 0.98	6*e (0.9094	l[In(hardness)]+0.6235)							

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data

exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.

- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the Commission on a site-specific basis where appropriate evidence is submitted.
- (5) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 μg/l total chromium in those waters classified for domestic water use.
- (6) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.
- (7) E.coli criteria and resulting standards for individual water segments, are established as indicators of the potential presence of pathogenic organisms. Standards for E. coli are expressed as a two-month geometric mean. Site-specific or seasonal standards are also two-month geometric means unless otherwise specified.
- (8) All phosphorus standards are based upon the concentration of total phosphorus.
- (9) The pH standards of 6.5 (or 5.0) and 9.0 are an instantaneous minimum and maximum, respectively to be applied as effluent limits. In determining instream attainment of water quality standards for pH, appropriate averaging periods may be applied, provided that beneficial uses will be fully protected.

(4) Assessment Criteria

The following criteria shall be used when assessing whether a specified waterbody is in attainment of the specified standard.

- (a) Upper South Platte Segment 6b, Chatfield Reservoir: Assessment Thresholds chlorophyll = 11.2 μg/l, summer average, 1 in 5 year allowable exceedance frequency phosphorus(Tot) = 0.035 mg/l, summer average, 1 in 5 year allowable exceedance frequency.
- (b) Upper South Platte Segment 16h: Selenium Standards and Assessment Locations

Selenium Standards:

West Toll Gate Creek: Selenium(chronic)=50.6, Selenium(acute)=119.2

East Toll Gate Creek: Selenium(chronic)=14.3, Selenium(acute)=15.9

Toll Gate Creek: Selenium(chronic)=26.5, Selenium(acute)=29.5

Selenium Assessment Locations:

- Toll Gate Creek (TG6): Downstream of the confluence of East and West Toll Gate Creeks, at 6th Avenue near the gage station.
- East Toll Gate Creek (ET1): Upstream of the confluence with West Toll Gate Creek, at Chambers Road and 1st Avenue.
- West Toll Gate Creek (WT1): Upstream of the confluence with East Toll Gate Creek, at 2nd Avenue.
- (c) Upper South Platte Segment 15 and Middle South Platte Segment 1a: Dissolved Oxygen Assessment Locations

For the purpose of determining attainment of the standard, dissolved oxygen measurements shall only be taken in the flowing portion of the stream and at mid depth, and at least six inches above the bottom of the channel. Dissolved oxygen measurements in man-made pools are not to be used for determination of attainment of the standards.

- (d) Big Dry Creek Segment 1: Selenium Assessment Locations
 - bdc 1.5: Upstream of Broomfield Wastewater Treatment Plant
 - bdc 2.0: Upstream of Westminster Big Dry Creek Wastewater Treatment Facility
 - bdc 4.5: Upstream of Northglenn Wastewater Treatment Plant
- (e) Big Dry Creek Segment 2 (Standley Lake): Assessment Thresholds

Chlorophyll = $4.4 \mu g/L$, Mar-Nov average, 1 in 5 yr allowable exceedance frequency

(f) Upper South Platte Segment 16i, Sand Creek from Toll Gate Creek to the confluence with the South Platte River: assessment locations for selenium and total mercury.

Selenium Standards:

Upper: Selenium(chronic)=38.2, Selenium(acute)=45.1

Lower: Selenium(chronic)=9.0, Selenium(acute)=TVS

Selenium Assessment Locations:

- Upper (SWA): Downstream of the confluence of Sand Creek and Toll Gate Creek approximately 250 meters upstream of the Sand Creek Water Reuse Facility (SCWRF) discharge near the Peoria Street Bridge.
- Lower (SW1): Above Suncor, approximately 60 meters upstream of the Union Pacific Railroad crossing and upstream of Brighton Boulevard.

Mercury Assessment Locations and Method:

• Sand Creek (SWP) – Downstream of the sheet piling drop structure located near the Brighton Blvd. Bridge.

- Sand Creek (SWP2-1) Approximately 600 feet downstream of Suncor Outfall 003 and immediately upstream of the Burlington Ditch Siphon.
- Attainment of the standard below Brighton Blvd. shall be assessed using the weighted 85th percentile total mercury concentration from both assessment locations.
- (g) Upper South Platte Segment 16g (Marcy Gulch): Selenium assessment.

Determination of attainment of the chronic and acute selenium standards will be based on the 85th and 95th percentile, respectively, of paired samples taken the same day from from the two following locations:

- L29: Marcy Gulch upstream of Santa Fe Drive, immediately upstream of the Centennial Water & Sanitation District WWTF
- L36: Marcy Gulch upstream of the confluence with the South Platte River.
- (h) Upper South Platte Segment 16j: Selenium standards and assessment.

Lee Gulch: Selenium(chronic)=10, Selenium(acute)=TVS

Little's Creek: Selenium(chronic)=6, Selenium(acute)= TVS

Big Dry Creek: Selenium(chronic)=23, Selenium(acute)=26

Little Dry Creek: Selenium(chronic)=11, Selenium(acute)=TVS

Determination of attainment of the chronic and acute selenium standards will be based on the 85th and 95th percentile, respectively. The selenium assessment locations are:

- Lee Gulch: Upstream of the confluence with the South Platte River
- Little's Creek: Upstream of the confluence with the South Platte River
- Big Dry Creek: Upstream of the confluence with the South Platte River
- Little Dry Creek: Upstream of the confluence with the South Platte River
- (i) Cherry Creek Segment 4b: Selenium standards and assessment

Upper Cottonwood Creek:

October-February Selenium(acute/chronic)=TVS/14.0

March-September Selenium(acute/chronic)=TVS/7.1

Lower Cottonwood Creek:

October-February Selenium(acute/chronic)=TVS/5.1

March-September Selenium(acute/chronic)=TVS

Break between Upper and Lower Cottonwood Creek is at the confluence with Lone Tree Creek.

Upper Lone Tree Creek:

October–February Selenium(acute/chronic)=41.0/37.2

March-September Selenium(acute/chronic)=19.3/19.0

Lower Lone Tree Creek: Selenium(acute/chronic)=TVS

Break between Upper and Lower Lone Tree Creek is at the ACCWA Lone Tree Facility Outfall.

Upper Windmill Creek: Selenium(acute/chronic)=TVS

Middle Windmill Creek:

October-February Selenium(acute/chronic)=TVS/15.1

March-September Selenium(acute/chronic)=TVS/8.4

Lower Windmill Creek: Selenium(acute/chronic)=TVS

Break between Upper, Middle and Lower Windmill Creek is at the assessment locations.

Determination of attainment of the chronic and acute selenium standards will be based on the 85th and 95th percentile, respectively.

- Upper Cottonwood Creek: From headwaters to confluence with Lone Tree Creek, to be assessed at CT-P2 39.605694, -104.84825. At Peoria St.
- Lower Cottonwood Creek: From confluence with Lone Tree Creek to terminus at Cherry Creek Reservoir, to be assessed at CT2-39.627861, -104.85025. West of Perimeter Road and south of bike path.

- Upper Lone Tree Creek: From headwaters to just above site LTC-3, to be assessed using data from LTC-1 and LTC-2
 LTC-1 39.58435, -104.838017. Approximately 0.15 miles N of S. Revere Pkwy.
 LTC-2 39.59685, -104.838217. Approximately 10 yards N of E. Peakview Ave.
- Lower Lone Tree Creek: From site LTC-3 to confluence with Cottonwood Creek, to be assessed using data from LTC-3 and LTC-4
 LTC-3 39.604817, 104.837083. Below ACWWA Lone Tree facility outfall. LTC-4 39.614483, 104.840217. Downstream of confluence with Windmill Creek
- Upper Windmill Creek: From Headwaters to WC-1 Site WC-1-39.574967,
 -104.830017. West of Potomac St and South of Broncos Pkwy.
- Middle Windmill Creek: All sites between (but not including) WC-1 and WC-2. WC-1—39.574967, -104.830017. West of Potomac St and South of Broncos Pkwy.
 WC-2—39.59655, -104.821767. North of Cherry Creek Trail.
- Lower Windmill Creek: From site WC-2 to confluence with Lone Tree Creek, to be assessed at WC-2-39.59655, -104.821767. North of Cherry Creek Trail.
- (j) Clear Creek Segment 5: Manganese assessment
 - Below Woods Creek: West Fork of Clear Creek approximately 0.3 miles downstream of Berthoud Falls (39.771829°, -105.803418°).
 - Mouth of West Fork: West Fork of Clear Creek near County Road 257.
- (5) <u>Stream Classifications and Water Quality Standards Tables</u>

The stream classifications and water quality standards tables in Appendix 38-1 are incorporated herein by reference.

38.7 <u>COMMISSION'S DETERMINATION REGARDING STATE WATERS</u>

(1) Introduction

The following list describes the Commission's determinations regarding water bodies that do not contain "State Waters."

- (2) Determinations
 - (a) Marston Forebay located in Upper South Platte Segment 23 within Sections 11, 12, 13 and 14 in Township 5 South, Range 69 West of the 6th P.M. in the City and County of Denver, Colorado.

38.8-38.9 **RESERVED**

. . . .

38.91 STATEMENT OF BASIS AND PURPOSE REGARDING THE ADOPTION OF NON-SUBSTANTIVE CHANGES TO THE CLASSIFICATION AND NUMEIRC STANDARDS FOR

SOUTH PLATTE RIVER BASIN, LARAMIE RIVER BASIN, REPUBLICAN RIVER BASIN, SMOKY HILL RIVER BASIN, JANUARY 11, 2016 RULEMAKING; EFFECTIVE DATE MARCH 1, 2016

The provisions of C.R.S. 25-8-202(1)(i) and 25-8-401(2) provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

The Commission, in a public rulemaking hearing adopted extensive changes to the format of this regulation. The Commission does not intend to change any existing designations, use classifications or standards, or the implementation of any standards as the results of changing the format.

This rulemaking was in response to longstanding issues with managing the information contained in the standards tables. The changes made in this hearing reflect a change from storing the information in word processing documents to storing the information in a relational database. This change in platform will provide better consistency, facilitate error checking as well as a more readable format for the standards tables. Storing the information in a database allows it to be used more efficiently by other programs in the Division.

While it was the Commission's intent not to change the substantive meaning of the regulations in this rulemaking, in cases where there was ambiguity the revised regulation reflects the Commission's interpretation of the previous format based on Regulation #31 (the Basic Standards and Methodologies for Surface Water) and the experience of the Commission and its staff.

Overall format changes: The new format displays parameters by name, rather than by period table element abbreviations. The section formerly titled "Temporary Modifications and Qualifiers" does not appear in the new format. Instead, there is a separate section for qualifiers, and an "Other" section. Temporary modifications, variances and other footnotes are displayed in the "Other" section. Many items that were formerly in the "Temporary Modifications and Qualifiers" column will be displayed in the "Other" column and will have a different appearance or modified wording, although the information is substantively the same. Each footnote in the "Other" section is preceded by a heading that indicates where the footnote applies:

- Footnotes regarding a use classification will begin with the heading "Classification..."
- Footnotes regarding the antidegradation designation begin with the heading "Designation..."
- Footnotes that relate to a particular standard begin with the name of the parameter, for example "Selenium(chronic)= ..."

Also, since there is more room for information within each segment, footnotes "B" and "C" were replaced with the full text in each segment where these footnotes were applied. Footnote "A" was maintained because the text is too long to be displayed in the "Other" section for each segment where it applies. Footnote "D" was changed to footnote "B" and was maintained because the text is too long to be displayed in the "Other" section.

Constraints of the new format: Some adjustments were made to the way that data is displayed in order to be compatible with the functions of the Standards Database. Database organization requires that information which relates to multiple standards must be attached to each individual parameter. For example, a segment with a temporary modification listed for "all parameters" in the old format will have a temporary modification listed for each individual parameter in the new format. There are also spacing constraints in the new format, which require some information to be moved either to the "other" box on the new format, or moved out of the segment entirely and into another location in the regulation.

<u>Clarification of changes</u>: The shift to a database organizational structure required consistency in the way each data element is addressed. To insure that data is stored and displayed correctly, the following changes were made.

- The "type" of temporary modification is no longer displayed in the segment tables, since they
 have no regulatory effect and have been inconsistently displayed.
- In the old format, waters that had a reviewable antidegradation designation were identified by the absence of either "UP" or "OW" in the designation column. These segments now display the word "reviewable" under the designation heading. There needed to be a value in the designation column for every segment.
- Dissolved standards are not specifically noted as dissolved in the new format. All metals standards are dissolved unless noted with a "T" or a "t". For example, a manganese standard in the old format of "WS(dis") is displayed as "WS" in the new format.
- A new footnote 7 was added to clarify that although E. coli is listed in the "chronic" column, the standard is a two-month geometric mean rather than a 30-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 7.
- A new footnote 8 was added to indicate that all phosphorus standards are based upon the
 concentration of total phosphorus. In the old format, individual phosphorus standards were noted
 as "total" in some basins and not others.
- A new footnote 9 was added to clarify that although pH is listed in the "acute" column, the standard is not applied as a 1-day average. The language of footnote 7 was taken from Regulation 31, Table 1, footnote 3.
- Physical and Biological Parameters: Some parameters are not specifically identified in the old format segment tables as acute or chronic. The new format requires that each parameter is placed in either the acute or chronic column. Specifically, these parameters and the basis for being identified as acute or chronic are as follows:
 - pH (acute) Regulation #31, Table 1, footnote 3
 - E. Coli (chronic) Regulation #31, Table 1, footnote 7
 - D.O. (chronic) Regulation #31, Table 1, footnote 1
 - cyanide (acute) Regulation #31, Table 2
 - sulfide (chronic) Regulation #31, Table 2
 - nitrate (acute) Regulation #31, Table 2
 - nitrite (chronic) not specified in Regulation #31. Nitrite has been implemented as a 30-day average standard in permits and assessments.
 - chloride (chronic) Regulation #31, Table 2
 - boron (chronic) Regulation #31, Table 2
 - sulfate (chronic) Regulation #31, Table 2

- In the old format, uranium standards for Big Dry Creek were shown in the attached table, but not listed with each segment. The new format includes the uranium standards for Big Dry Creek Segments 2-7. These were added because the new format displays every parameter. If uranium standards are not listed in the segment table, then it appears to communicate that there is not a uranium standard. There is still a footnote to refer to the table for the other site-specific radionuclide standards.
- Some site-specific standards had too much information to be contained in the new table, so it was moved to 38.6(4) (Upper South Platte Segments 16h, 16i, 16j and Cherry Creek Segment 4b).

UPPER SOUTH PLATTE RIVER SEGMENT 15

Site-Specific Minimum Dissolved Oxygen and Ammonia Standards

UNDERLYING STANDARDS

Dissolved Oxygen

Early Life Stage Protection Period (April 1 through July 31)

1-Day^{1,5,6} 3.0 mg/L (acute)

7-Day Average ^{1.2.,4} 5.0 mg/L

Older Life Stage Protection Period (August 1 through March 31)

1-Day ^{1,5} 2.0 mg/L (acute)

7-Day Mean of Minimums^{1,3}2.5 mg/L

30-Day Average ^{1.2.} 4.5 mg/L

TEMPORARY MODIFICATION

During the period until October 31, 2001, the Segment 15 dissolved oxygen standards from 88th Avenue north to the end of the Segment shall be the currently existing ambient conditions as monitored in 1992, 1993, and 1994 by the Division and by the Metro District. Beginning November 1, 2001, the standards shall apply to all sections of Segment 15 south of the Brighton Ditch diversion. The standards north of the Brighton Ditch diversion shall continue to be the ambient conditions existing in 1992, 1993, and 1994. Beginning November 1, 2004, the standards shall apply to all sections of Segment 15.

Refer to Section 38(6)(4)(c) for Dissolved Oxygen assessment locations.

Footnotes

^{1.} For the purposes of determining compliance with the standards, dissolved oxygen measurements shall only be taken in the flowing portion of the stream at mid-depth, and at least six inches above the bottom of the channel. All sampling protocols and test procedures shall be in accordance with procedures and protocols approved by the Division.

- A minimum of four independent daily means must be used to calculate the average for the 7-Day Average standard. A minimum of eight independent daily means must be used to calculate the average for the 30-Day Average standard. The four days and the eight days must be representative of the 7-Day and the 30-Day periods respectively. The daily means shall be the mean of the daily high and low values. In calculating the mean values, the dissolved oxygen saturation value shall be used in place of any dissolved oxygen measurements which exceed saturation.
- The 7-Day Mean minimum is the average of the daily minimums measured at the location on each day during any 7-Day period.
- North of the Lupton Bottoms Ditch diversion, the ELS 7-Day average standards for the period July 1 June 31 shall be 4.6 mg/L.
- 5. During a 24 hour day dissolved oxygen levels are likely to be lower during the nighttime when there is no photosynthesis. The dissolved oxygen levels should not drop below the acute standard (ELS acute standard of 3.0 mg/L or the OLS standards of 2.0 mg/L). However, if during the ELS period multiple measurements are below 3.0 mg/L during the same nighttime period, the multiple measurements shall be considered a single exceedance of the acute standard. For measurement below 2.0 mg/L during either the ELS or the OLS periods, each hourly measurement below 2.0 mg/L shall be considered an exceedance of the acute standards.
- In July, the dissolved oxygen level in Segment 15 may be lower than the 3.0 mg/L acute standard for up to 14 exceedances in any one year and up to a total of 21 exceedances in three years before there is a determination that the acute dissolved oxygen standards is not being met. Exceedances shall be counted as described in Footnote 5.

Ammonia:

Early Life Stage Protection Period (April 1 through July 31)

Ammonia Warm Water = (mg/l as N)Total $acute = \frac{0.411}{1+10^{7.204-pH}} + \frac{58.4}{1+10^{pH-7.204}}$ $chronic \ (Apr1 - July31) = \left(\frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}}\right) * MIN \left(2.85, 1.45*10^{0.028(25-T)}\right)$ $chronic \ (Aug1 - Mar31) = \left(\frac{0.0577}{1+10^{7.688-pH}} + \frac{2.487}{1+10^{pH-7.688}}\right) * 1.45*10^{0.028*(25-MAX(T, 7))}$ $NH_3 = \text{old TVS}$ Warm Water Acute = 0.62/FT/FPH/2(4 old) in mg/ (N)

Dissolved Oxygen:

```
STANDARDS
Early Life Stage Protection Period (April 1 through July 31)
1-Day <sup>1.4,5</sup> 3.0 mg/L (acute)
7-Day Average <sup>1.2</sup> 5.0 mg/L
Older Life Stage Protection Period (August 1 through March 31)
1-Day <sup>1.4</sup> 2.0 mg/L (acute)
7-Day Mean of Minimums <sup>1.3.</sup> 2.5 mg/L
30-Day Average <sup>1.2.</sup> 4.5 mg/L
```

Refer to Section 38(6)(4)(c) for Dissolved Oxygen assessment locations.

Footnotes

- 1. For the purpose of determining compliance with the standards, dissolved oxygen measurements shall only be taken in the flowing portion of the stream at mid-depth, and at least six inches above the bottom of the channel. All sampling protocols and test procedures shall be in accordance with procedures and protocols approved by the Division.
- 2. A minimum of four independent daily means must be used to calculate the average for the 7-Day Average standard. A minimum of eight independent daily means must be used to calculate the average for the 30-Day Average standard. The four days and the eight days must be representative of the 7-Day and the 30-Day periods respectively. The daily mean shall be the mean of the daily high and low values. In calculating the mean values, the dissolved oxygen saturation value shall be used in place of any dissolved oxygen measurements which exceed saturation.
- 3. The 7-Day Mean Minimum is the average of the daily minimums measured at a location on each day during any 7-Day period.
- 4. During a 24 hour day, dissolved oxygen levels are likely to be lower during the nighttime when there is no photosynthesis. The dissolved oxygen levels should not drop below the acute standard (ELS acute standard of 3.0 mg/L or the OLS standard of 2.0 mg/L). However, if during the ELS period multiple measurements are below 3.0 mg/L during the same nighttime period, the multiple measurements shall be considered a single exceedance of the acute standard. For measurements below 2.0 mg/L during either the ELS or the OLS periods, each hourly measurement below 2.0 mg/L shall be considered an exceedance of the acute standard.
- 5. In July, the dissolved oxygen level in Segment 1a may be lower than the 3.0 mg/L acute standard for up to 14 exceedances in any one year and up to a total of 21 exceedances in three years before there is a determination that the acute dissolved oxygen standards is not being met. Exceedances shall be counted as described in Footnote 4.

Ammonia:

Warm Water = (mg/l as N)Total

$$acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$$

Table 2 SITE SPECIFIC RADIONUCLIDE STANDARDS*

(in Picocuries/Liter, except as noted)

The radionuclides listed below shall be maintained at the lowest practical level and in no case shall they be increased by any cause attributable to municipal, industrial, or agricultural practices to exceed the site specific numeric standards.

A. Ambient ba	sed site-specific stan	dards:		
	Segment 2 Standley Lake	Segment 3 Great Western Reservoir	Segment 4a Segment 5 Woman Creek	Segment 4a Segment 4b Segment 5 Walnut Creek
Gross Alpha	6	5		
Gross Beta	9	12		
Plutonium	.03	.03	0.15** ***	0.15** ***
Americium	.03	.03	0.15** ***	0.15** ***
Tritium	500	500	500	500
Uranium	3	4	16.8 μg/l	16.8 μg/l
B. Other site-specif	ic standard applicable	e to segments 2,3,4a,	4b, and 5.	
Curium	60	60	60	60
Neptunium	30	30	30	30

^{*}Statewide standards also apply for radionuclides not listed above.

^{**0.15}pCi/l Statewide Basic Standards.

^{***}For plutonium and americium measurements in Segment 5 in Woman Creek and Segment 5 in Walnut Creek, attainment will be assessed based on the results of a 12-month flow-weighted rolling average concentration (computed monthly).

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS - FOOTNOTES

- A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- B) Assessment of adequate refuge shall rely on the Cold Large Lake table value temperature criterion and applicable dissolved oxygen standard rather than the site-specific temperature standard.

WATER QUALITY CONTROL COMMISSION

5 CCR 1002-38

REGULATION NO. 38 CLASSIFICATIONS AND NUMERIC STANDARDS FOR

SOUTH PLATTE RIVER BASIN, LARAMIE RIVER BASIN REPUBLICAN RIVER BASIN, SMOKY HILL RIVER BASIN

. . . .

38.92 STATEMENT OF BASIS SPECIFIC STATUTORY AUTHORITY AND PURPOSE DECEMBER 14, 2015 RULEMAKING; FINAL ACTION JANUARY 11, 2016; EFFECTIVE DATE JUNE 30, 2016

The provisions of C.R S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Pursuant to the requirements in the Basic Standards (at 31.7(3)), the Commission reviewed the status of temporary modifications scheduled to expire before December 31, 2017 to determine whether the temporary modification should be modified, eliminated or extended. Temporary modification of standards on one segment was reviewed.

Upper South Platte segment 3: Temporary modification of ammonia. The Town of Florisant is making progress toward resolution of uncertainty regarding the underlying chronic cadmium, copper and zinc standards. The Commission made no change to the expiration date of 6/30/2017 because the original time allotment was deemed adequate.

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT

WATER QUALITY CONTROL COMMISSION

5 CCR 1002-93

REGULATION #93

COLORADO'S SECTION 303(D) LIST OF IMPAIRED WATERS AND MONITORING AND EVALUATION LIST

93.1 Authority

These regulations are promulgated pursuant to section 25-8-101 et seq C.R.S. as amended, and in particular, 25-8-202 (1) (a), (b), (i), (2) and (6); 25-8-203 and 25-8-204.

93.2 Purpose

This regulation establishes Colorado's Lists of Impaired Waters. These waters include Water-Quality-Limited Segments Requiring Total Maximum Daily Loads ("TMDLs"), impaired waters that do not require a TMDL, and Colorado's Monitoring and Evaluation List:

- (1) The list of Water-Quality-Limited Segments Requiring TMDLs fulfills requirements of section 303(d) of the federal Clean Water Act which requires that states submit to the U.S. Environmental Protection Agency a list of those waters for which technology-based effluent limitations and other required controls are not stringent enough to implement water quality standards. These segments are included in Section 93.3 with parameters included in the Clean Water Section 303(d) Impairment column.
- (2) Colorado's Monitoring and Evaluation List identifies water bodies where there is reason to suspect water quality problems, but there is also uncertainty regarding one or more factors, such as the representative nature of the data. Water bodies that are impaired, but it is unclear whether the cause of impairment is attributable to pollutants as opposed to pollution, are also placed on the Monitoring and Evaluation List. This Monitoring and Evaluation list is a state-only document that is not subject to EPA approval. These segments are included in Section 93.3 with parameters included in the Colorado's Monitoring and Evaluation column.
- (3) The list of Water-Quality-Limited Segments Not Requiring a TMDL identifies segments where data is available that indicates that at least one classified use is not being supported, but a TMDL is not needed. These segments and parameters are included in Section 93.4.

93.3 Water Bodies Requiring TMDLs or Identified for Monitoring and Evaluation

Only those segments where a Clean Water Section 303(d) Impairment has been determined require TMDLs. For these segments, TMDLs are only required for those parameters that are identified as impairments.

93.4 <u>Impaired Water Bodies Not Requiring TMDLs</u>

Segments may be determined to be impaired if available data and/or information indicate that at least one classified use is not being supported, but a TMDL is not needed. These waters are broken out into three additional subcategories. Waters in these lists do not require a TMDL for one of the following reasons:

 Segments where a TMDL has been completed and approved but uses are not yet attained;

- Segments where other required control mechanisms are expected to address waterbody-pollutant combinations and will attain water quality standards in a reasonable period of time. (Category 4b Segment/Parameters)
- Segments where the impairment is not caused by a pollutant. (Category 4c Segment/Parameters)

	Impaired Water Bodies Not Requiring TMDLs

93.15 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 2015 RULEMAKING, FINAL ACTION JANUARY 11, 2016, EFFECTIVE DATE OF MARCH 1, 2016

The provisions of C.R.S. 25-8-202(1)(a), (b) and (i), (2) and (6); 25-8-203; 25-8-204; and 25-8-401; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

A. Revisions to 303(d) List

1. Introduction

This regulation updates Colorado's List of Water-Quality-Limited Segments Requiring Total Maximum Daily Loads (TMDLs) to reflect additional water quality information available since the Regulation was promulgated in 2006. This list was prepared to fulfill section 303(d) of the federal Clean Water Act (Act) which requires that states submit to the U.S. Environmental Protection Agency (EPA) a list of those waters for which technology-based effluent limitations and other required controls are not stringent enough to implement water quality standards.

This regulation also updates Colorado's Monitoring and Evaluation List (M&E List) to reflect additional water quality information available since the Regulation was last promulgated in 2012.

List Development

a. Listing Methodology

The Section 303(d) Listing Methodology - 2016 Listing Cycle ("Listing Methodology") provides the listing process, the criteria for listing, and the criteria for determination of TMDL priority. The Listing Methodology was developed through a public process and finalized as a policy at a Water Quality Control Commission (Commission) administrative action hearing in March 2015.

This Listing Methodology sets forth the criteria that generally were used to make decisions regarding which waters to include on the 2016 Section 303(d) List and the 2016 M&E List. However, this methodology was not adopted by the Commission as a rule. The Commission therefore has the flexibility to take into account other appropriate factors in making site-specific listing decisions.

b. Information Considered

To determine the final segments and parameters that would be included on the 303(d) list and M&E list, the Commission considered all existing and readily available information that relates to the segments included in the Notice of Rulemaking (published August 10, 2015). The Commission considered existing and readily available data, which includes the data used to prepare the identification processes, calculations and models referenced in 40 CFR §130.7(a)(5)(i), (ii) and (iv), and data that was presented in a readily usable format and submitted in conformance with 40 CFR §130.7(a)(5)(iii). In addition,

the Commission accepted credible data and information that was submitted in accordance with the listing process schedule. The Division will continue to independently collect and analyze new data on a rotating basin basis as part of its triennial review efforts, and the Commission will utilize such data and information in making future listing determinations. Existing data which was not brought forward through one of these mechanisms or otherwise presented to the Commission in accordance with the schedule was not treated as "readily available" for purposes of making the 2016 listing decisions. Such information will be considered in the next listing cycle if the information is provided through a proper mechanism.

c. Data Quality

In the Division's Quality Management Plan 2011 for the Collection and Utilization of Environmental Data, the Division states that "[i]t is the expressed goal of the Division to use only those analytical data that are both reliable and have a defined level of quality."

3. Segment Prioritization

The objective of prioritization is to identify those segments where the Division and the public should concentrate their resources. Priorities of High, Medium and Low were established according to section IV of the 2016 Section 303(d) Listing Methodology.

The Division remains committed to establishing a plan for monitoring and evaluating water bodies on the M&E List prior to the list submission date for the subsequent listing cycle. Further, the Commission has committed to determining their appropriate status (as either impaired or fully supporting) within ten years of their placement on the M&E List.

4. Impaired Segments Not Requiring TMDLs

In the 2016 listing cycle, the Commission has added a list of impaired waters where a TMDL is not required. There are three primary reasons why the Commission did not require a TMDL for an impaired segment: (1) a TMDL has already been completed, but the classified uses are not yet attained but will be in the foreseeable future; (2) there is a required control mechanism in place that is expected to address all segment-pollutant combinations and the segment will attain water quality standards in a reasonable period of time; or (3) the Commission determined that the impairment is not caused by a pollutant. These segments have been included in section 93.4.

5. Fish Mercury (Hg) Listings

The 303(d) Listing Methodology was revised in 2014 for the assessment of Fish Mercury (Hg). The methods compare the weighted average fish Hg for each waterbody and species (and size class, where appropriate) to a 0.3 ppm threshold. The sample size must meet or exceed 30 fish tissue samples per waterbody/species to list new waterbodies for Fish Hg. Waterbodies can also be listed if there is overwhelming evidence of impairment (>0.45 ppm Hg) and a sample size of at least 10 fish tissue samples.

The Commission retained the following 15 lakes on the 303(d) List:

- Lower Arkansas segment 15, Trinidad Reservoir (COARLA15)
- Middle Arkansas segment 26, Horseshoe Lake (COARMA26)
- Upper Arkansas segment 40, Brush Hollow Reservoir (COARUA40)

- Lower Colorado segment 20, Rifle Gap Reservoir (COLCLC20)
- Dolores River segment 4b, McPhee Reservoir (COSJDO04b)
- La Plata segment 11, Narraguinnep Reservoir (COSJLP11)
- La Plata segment 11, Totten Reservoir (COSJLP11)
- Los Pinos segment 3, Vallecito Reservoir (COSJPN03)
- San Juan segment 8, Echo Canyon Reservoir (COSJSJ08)
- Big Thompson segment 11, Carter Lake (COSPBT11)
- Cache la Poudre segment 14, Horsetooth Reservoir (COSPCP14)
- Upper South Platte segment 17a, Berkeley Lake (COSPUS17a)
- Upper South Platte segment 17a, Rocky Mountain Lake (COSPUS17a)
- Yampa River segment 23, Catamount Reservoir (COUCYA22)
- Yampa River segment 22, Elkhead Reservoir (COUCYA23)

The Commission retained the following 3 lakes on the M&E List:

- Middle Arkansas segment 27, Teller Reservoir (COARMA27)
- San Juan segment 8, Navajo Reservoir (COSJSJ08)
- Boulder Creek segment 18, Gross Reservoir (COSPBO18)

The Commission moved the following lake from the M&E List to the 303(d) List:

North Platte segment 9, Big Creek Reservoir (COUCNP09)

The Commission added the following lake to the M&E List:

• Upper South Platte segment 19, Cheesman Reservoir (COSPUS19)

The Commission removed the following lakes from the 303(d) List or the M&E List:

- Big Thompson segment 12, Boyd Lake (COSPBT12)
- Big Thompson segment 14, Lonetree Reservoir (COSPBT14)
- Upper Colorado segment 12, Lake Granby (COUCUC12)

6. Aquatic Life Listings

In October 2010, the Commission adopted Policy 10-1, Aquatic Life Use Attainment Commission's Policy ("Policy 10-1"), which established that the Colorado multi-metric index ("MMI") is an appropriate tool for the quantitative bioassessment of the health of aquatic communities. Utilizing the Commission Policy 10-1, the Division calculated over 750 MMI scores for the 2016 listing cycle. Based on this assessment, the Commission determined that 53 new segments were not attaining, with an additional 14 new segments included on the M&E List. These segments are in addition to 23 segments that were previously included on the 2012 303(d) List, and 5 segments that were previously included on the 2012 M&E List. For 50 of these segments that are not attaining for aquatic life a specific pollutant could not be identified as the cause of non-attainment, accordingly these 50 segments were listed as provisional.

Several segments had data outside of the standard index period for data collection. The Commission included these segments on the M&E List in 2012 to allow the Division and parties to gather additional information within the standard index period. The 2016 Listing Methodology allowed additional flexibility to include additional data that was collected four weeks after the October deadline to be considered in the index period. This resulted in the Commission moving some segments from the M&E List to the 303(d) List. Any data collected outside of the standard index period was not used for the 2016 listing cycle.

The Commission added the following segments to the 303(d) List for non-attainment of their Aquatic Life Use based on Policy 10-1:

- White River segment 7 (COLCWH07)
- White River segment 23, East Douglas Creek (COLCWH23)
- Closed Basin segment 2a, North Fork Carnero Creek (CORGCB02a)
- Closed Basin segment 2b, La Garita Creek (CORGCB02b)
- Rio Grande segment 11 (CORGRG11)
- Rio Grande segment 20a (CORGRG20a)
- Big Thompson segment 2 (COSPBT02)
- Upper Gunnison segment 01, Stewart Creek (COGUUG01)
- Upper Gunnison segment 4, Taylor River (COGUUG04

The Commission provisionally added the following segments to the 303(d) List for non-attainment of their Aquatic Life Use based on Policy 10-1:

- Fountain Creek segment 3a, West Monument Creek (COARFO03a)
- Fountain Creek segment 6 (COARFO06)
- Lower Arkansas segment 6a, Apache Canyon (COARLA06a)
- San Miguel segment 12a, MaKenzie Creek (COGUSM12a)
- Upper Gunnison segment 2, Willow Creek (COGUUG02)
- Upper Gunnison segment 18b (COGUUG18b)
- Upper Gunnison segment 19, Razor Creek (COGUUG19)
- Upper Gunnison segment 26, Crystal Creek (COGUUG26)
- Closed Basin/San Luis Valley segment 9b, Kerber Creek from U S Gulch to the confluence with San Luis Creek (CORGCB09b)
- La Plata segment 5a (COSJLP05a)
- La Plata segment 6a (COSJLP06a)
- Piedra River segment 6a (COSJPI06a)
- Bear Creek segment 2 (COSPBE02)
- Boulder Creek segment 7a (COSPBO07a)
- Cache la Poudre segment 2a (COSPCP02a)
- Lower South Platte segment 2b, Kiowa Creek (COSPLS02b)
- Upper South Platte segment 3, Pine Creek, Fourmile Creek and West Creek (COSPUS03)
- Upper South Platte segment 10a, East Plum Creek (COSPUS10a)
- Upper South Platte segment 11b, Spring Creek (COSPUS11b)
- Blue River segment 1 (COUCBL01)
- Blue River segment 2b, Blue River to the confluence with Swan River (COUCBL02b)
- Blue River segment 2c (COUCBL02c)
- Blue River segment 5 (COUCBL05)
- North Platte segment 4a, Little Grizzly Creek (COUCNP04a)
- Yampa segment 12, Wolf Creek (COUCYA12)

The Commission retained the following segments on the 303(d) List for non-attainment of their Aquatic Life Use:

- White River segment 13c, Yellow Creek from Barcus Creek to the White River (COLCWH13c)
- Clear Creek segment 14b (COSPCL14b)
- Clear Creek segment 15 (COSPCL15)
- Big Thompson segment 9, Little Thompson River (COSPBT09)

The Commission retained the following segments provisionally on the 303(d) List for non-attainment of their Aquatic Life Use:

- Upper Arkansas segment 21a, Squaw Gulch to a point 1.5 miles upstream of the confluence with Fourmile Creek (COARUA21a)
- San Miguel segment 12a, Maverick Draw (COGUSM12a)
- Upper Gunnison segment 24, Cochetopa Creek from Forest Rd 43 to Tomichi Creek (COGUUG24)
- Uncompanded segment 11, Deer Creek (COGUUN11)
- Lower Yampa/Green River segment 22a, Talamantes Creek (COLCLY22a)
- White River segment 15, Piceance Creek (COLCWH15)
- White River segment 20, Black Sulphur Creek (COLCWH20)
- Rio Grande segment 12 (CORGRG12)
- Boulder Creek segment 9, From 107th Street to the confluence with Coal Creek (COSPBO09)
- Upper South Platte segment 10a, West Plum Creek (COSPUS10a)
- Upper South Platte segment 11a, Cook Creek (COSPUS11a)
- Eagle River segment 6, Mainstem of Lake Creek from confluence with East and West Lake Creek to the mouth (COUCEA06)
- Eagle River segment 6, Red Sandstone Creek to confluence with Gore Creek (COUCEA06)
- Eagle River segment 8 (COUCEA08)
- Roaring Fork segment 3a, Roaring Fork from Hunter Creek to Trentaz Gulch (COUCRF03a)
- Roaring Fork segment 3a, West Sopris Creek (COUCRF03a)
- Roaring Fork segment 3d, Cattle Creek from Bowers Gulch (COUCRF03d)
- Roaring Fork segment 7, South Fork of Frying Pan River from diversion to unnamed tributary (COUCRF07)
- Upper Colorado segment 10a, Fraser River and Vasquez Creek (COUCUC10a)

The Commission added the following segments to the M&E List for possible non-attainment of their Aquatic Life Use:

- Upper Arkansas segment 14c, North Hardscrabble Creek (COARUA14c)
- Upper Arkansas segment 15 (COARUA15)
- Rio Grande segment 7 (CORGRG07)
- Lower Yampa/Green River segment 3i (COLCLY03i)
- La Plata/Mancos/McElmo/San Juan segment 4a (COSJLP04a)
- San Juan segment 5, Mainstem San Juan River (COSJSJ05)
- Clear Creek segment 2c (COSPCL02c)

The Commission retained the following segments on the M&E List for possible non-attainment of their Aquatic Life Use:

- Upper Arkansas segment 5. Lake Fork below Sugarloaf Dam (COARUA05)
- White River segment 13b, Duck Creek (COLCWH13b)
- Boulder Creek segment 7b (COSPBO07b)
- Clear Creek segment 1. Kearney Gulch and Grizzly Gulch (COSPCL01)
- Upper South Platte segment 2a, South Fork of South Platte below Antero Reservoir (COSPUS02a)
- Upper South Platte segment 3, Trout Creek (COSPUS03)
- Blue River segment 17 (COUCBL17)
- Eagle River segment 6, Black Gore Creek (COUCEA06)
- Eagle River segment 6, Red Sand Stone Creek from USFS Boundary to northside of I-70 frontage road (COUCEA06)
- Upper Colorado segment 3, Colorado River from Windy Gap Reservoir to Derby Creek (COUCUC03)

The Commission expanded the portion of Upper Colorado segment 3 that is on the M&E List to include the portion from the outlet of Windy Gap Reservoir to Derby Creek. Despite improving MMI scores in the upper reach, the Commission was concerned about declining taxa in the upper reach, and feels the stream would benefit from additional investigation.

The Commission removed the following segments from the 303(d) List for attainment of their Aquatic Life Use:

- Upper Arkansas segment 21a, Cripple Creek from source to above Squaw Gulch (COARUA21a)
- Upper Gunnison segment 6b, Cement Creek (COGUUG06b)
- Upper Gunnison segment 29a, Lake Fork of the Gunnison River between Cooper and Silver Creek (COGUUG29a)
- White River segment 23, West Douglas Creek (COLCWH23)
- Bear Creek segment 1a, Bear Creek (COSPBE01a)
- St. Vrain segment 3, From the confluence with Left Hand Creek to the confluence with Boulder Creek (COSPSV03)
- Roaring Fork segment 4, Mainstem Brush Creek (COUCRF04)
- Yampa River segment 15, Elkhead Creek (COUCYA15)

The Commission removed the following segments from the M&E List for attainment of the Aquatic Life Use standard:

- Fountain Creek segment 4, Sand Creek (COARFO04)
- Upper Gunnison segment 8, Slate River (COGUUG08)
- Bear Creek segment 1e, All (COSPBE01e)
- Bear Creek segment 2, Below Kipling Parkway (CO 391) (COSPBE02)
- Boulder Creek segment 10 (COSPBO10)
- Lower South Platte segment 1 (COSPLS01)
- St. Vrain segment 3, From Hover Road to the confluence of Left Hand Creek (COSPSV03)
- Upper South Platte segment 11b, Bear Creek (COSPUS11b)
- North Platte segment 4a. Grizzly Creek (COUCNP04a)

The Commission moved the following segments from the M&E List to the 303(d) List, provisionally:

- Upper South Platte segment 6a, South Platte from Cheeseman Reservoir to Lazy Gulch (COSPUS06a)
- Upper South Platte segment 01a, South Platte River from the outlet of Elevenmile Reservoir to the Idlewilde picnic area (COSPUS01a)
- Upper South Platte segment 11b, Spring Creek (COSPUS11b)
- Eagle River segment 6, Beaver Creek from Wayne Creek to mouth (COUCEA06)
- Eagle River segment 9a, Eagle River from confluence with Berry Creek to confluence with Squaw Creek (COUCEA09a)
- North Platte segment 4a, Little Grizzly Creek (COUCNP04a)

The Commission removed the provisional qualifier for the non-attainment of the Aquatic Life Use standard for the following segments:

- Upper Gunnison segment 15a, South Beaver Creek (COGUUG15a)
- Clear Creek segment 14a, Clear Creek from Croke Canal to McIntyre Street (COSPCL14a)
- Upper South Platte segment 3, Horse Creek (COSPUS03)

7. Narrative Sediment Standard Listings

The Commission adopted a new approach in the 2016 Listing Methodology to evaluate impairment of the narrative sediment standard. This methodology, which is described in the Commission's Policy 98-1, Guidance for the Implementation of Colorado's Narrative Stream Standard Regulation #31, Section 31.11(1)(a)(i), includes assessment of the macroinvertebrate population using a sediment tolerance indicator score and the percent fines as compared to a regional threshold. An impairment listing is further supported by a review of the watershed for differences of the sampling site from the range of conditions used to establish the expected condition for the sediment region, as well as the presence of likely anthropogenic sources of sediment.

The Commission added the following segments to the 303(d) List for non-attainment of the narrative sediment standard:

- White River segment 13b (COLCWH13b)
- White River segment 23, East Douglas Creek from just below Tommy's Draw to the confluence with Douglas Creek (COLCWH23)
- Closed Basin segment 12a, East Pass Creek (CORGCB12a)

The Commission added the following segments to the M&E List for potential nonattainment of the narrative sediment standard:

- Yampa River segment 13b (COUCYA13b)
- North Platte segment 4a, Sand Creek (COUCNP04a)

The Commission removed the following segment from the 303(d) List for attainment of the narrative sediment standard:

 Upper South Platte segment 3, Trout Creek and its tributaries on USFS land (COSPUS03)

The Commission removed the following segments from the M&E List for attainment of the narrative sediment standard:

- Lower Yampa segment 2 (COLCLY02)
- Upper South Platte segment 3, Sugar Creek on USFS land (COSPUS03)
- Upper South Platte segment 3, Pine Creek on USFS land (COSPUS03)

The Commission retained these segments on the 303(d) List for non-attainment of the narrative sediment standard as no new data was available:

- Lower Colorado segment 13b, Salt Creek (COLCLC13b)
- White River segment 22, West Evacuation Wash, Douglas Creek (COLCWH22)
- Eagle River segment 6, Black Gore Creek, adjacent to I-70 (COUCEA06)
- Eagle River segment 9a, Eagle River from confluence with Berry Creek to confluence with Squaw Creek (COUCEA09a)
- Yampa River segment 3, Bushy Creek (COUCYA03)
- Clear Creek segment 14b (COSPCL14b)
- Clear Creek segment 15 (COSPCL15)

The Commission retained these segments on the M&E List for non-attainment of the narrative sediment standard as no new data was available:

- Lower Arkansas segment 7 (COARLA07)
- Lower Gunnison segment 2 (COGULG02)
- Lower Gunnison segment 11b, Lunch Creek (COGULG11b)
- Uncompandere River segment 4a (COGUUN04a)
- Uncompandere River segment 4b (COGUUN04b)
- Uncompandere River segment 4c (COGUUN04c)
- Uncompange River segment 15b, Dry Creek Watershed (COGUUN15b)
- Lower Colorado segment 1 (COLCLC01)
- Lower Colorado segment 2a (COLCLC02a)
- Lower Colorado segment 2b (COLCLC02b)
- Lower Yampa segment 16 (COLCLY16)
- Rio Grande segment 13 (CORGRG13)
- Los Pinos segment 6a, Stollsteimer Creek above Southern Ute boundary (COSJPI06a)
- Eagle River segment 9a, Eagle River from Gore Creek to confluence with Berry Creek (COUCEA09a)

8. Listings Due to Exceedances of the Temperature Standards

The 2016 Listing Methodology requires that the party proposing a temperature listing is responsible for investigating the temperature excursions as defined in Regulation No. 31, Footnote 5c, Table 1. This footnote includes four allowable excursions to exceedances of the temperature standard. These include an air temperature excursion, a low flow excursion, an excursion for the upper portion of a lake or reservoir and a winter shoulder season excursion. For the 2016 listing cycle the Division analyzed water temperature data from more than 240 stations in more than 100 segments. In cases where the excursions were evaluated and exceedances of the temperature standards remained, the Commission included these segments on the 303(d) List. In cases where the excursions were not fully evaluated and exceedances of the temperature standards remained, the Commission included these segments on the M&E List.

The Commission added the following segments to the 303(d) List for exceedances of the temperature standards (portions are indicated where appropriate):

- Fountain Creek segment 6 (COARFO06)
- Lower Arkansas segment 3a (COARLA03a)
- Middle Arkansas segment 2 (COARMA02)
- Lower Dolores segment 2 (COGULD02)
- Upper Gunnison segment 8 (COGUUG08)
- Lower Colorado segment 1 (COLCLC01)
- White River segment 7 (COLCWH07)
- White River segment 13c, Yellow Creek below Greasewood Creek (COLCWH13c)
- White River segment 15, Piceance Creek from 3 miles above the confluence with the White River, to the confluence with the White River. (COLCWH15)
- White River segment 23 (COLCWH23)
- Rio Grande segment 4b (CORGRG04b)
- Bear Creek segment 1b (COSPBE01b)
- Bear Creek segment 1e (COSPBE01e)
- Bear Creek segment 3 (COSPBE03), Vance Creek
- Big Thompson segment 2, From Cedar Creek to Home Supply Canal (COSPBT02)
- Clear Creek segment 11 (COSPCL11)
- Clear Creek segment 13b, Mainstem of North Clear Creek (COSPCL13b)
- Clear Creek segment 14a (COSPCL14a)
- Clear Creek segment 15 (COSPCL15)

- Upper South Platte segment 3, Goose Creek (COSPUS03)
- Blue River segment 17, Blue River downstream of Green Mtn Reservoir (COUCBL17)
- Roaring Fork segment 3c (COUCRF03c)
- Upper Colorado segment 2, Colorado River from Shadow Mountain Reservoir to Granby Reservoir (COUCUC02)
- Upper Colorado segment 2, Willow Creek, Stillwater Creek and Arapaho Creek (COUCUC02)
- Upper Colorado segment 7a, mainstem of Muddy Creek (COUCUC07a)
- Yampa River segment 2a, Yampa River below Stagecoach Reservoir (COUCYA02a)
- Yampa River segment 2b (COUCYA02b)

The Commission added the following segments to the M&E List for exceedances of the temperature standards (where portions are not indicated the entire segment was listed):

- Lower Arkansas segment 5b (COARLA05b)
- Lower Arkansas segment 6a, Reilly Canyon and Sarcillo Canyon(COARLA06a)
- Lower Arkansas segment 6b (COARLA06b)
- Middle Arkansas segment 7b (COARMA07b)
- Upper Arkansas segment 4a (COARUA04a)
- Lower Gunnison segment 8 (COGULG08)
- Closed Basin segment 12a (CORGCB12a)
- San Miguel segment 10, Naturita Creek (COGUSM10)
- San Miguel segment 12b (COGUSM12b)
- Lower Colorado segment 4a (COLCLC04a)
- Alamosa River segment 11b (CORGAL11b)
- Los Pinos River segment 4a, East Mancos River (COSJLP04a)
- Piedra River segment 5 (COSJPI05)
- San Juan River segment 6a (COSJSJ06a)
- San Juan River segment 10 (COSJSJ10)
- Bear Creek segment 6a, Turkey Creek below Parmelee Gulch (COSPBE06a)
- Bear Creek segment 6b (COSPBE06b)
- Clear Creek segment 14b (COSPCL14b)
- Clear Creek segment 17b (COSPCL17b)
- Upper South Platte segment 3, Trout Creek and tributaries on USFS property (COSPUS03)
- Upper South Platte segment 10a, Plum Creek (COSPUS10a)
- Upper South Platte segment 15 (COSPUS15)
- Upper South Platte segment 16g (COSPUS16g)
- Yampa River segment 13e (COUCYA13e)

The Commission retained the following segments on the 303(d) List for exceedances of the temperature standards:

- Bear Creek segment 1a, Bear Creek below the confluence with Yankee Creek (COSPBE01a)
- Cache la Poudre segment 10a (COSPCP10a)
- Saint Vrain segment 2b (COSPSV02b)
- Upper Colorado segment 3, From 578 Road Bridge (COUCUC03)
- Upper Colorado segment 7b, Muddy Creek and tributaries (COUCUC07b)
- Upper Colorado segment 10a, Ranch Creek (COUCUC10a)

The Commission retained the following segment on the M&E List for exceedances of the temperature standards:

Upper South Platte segment 2a, Twin Creek, on USFS Land (COSPUS02a)

The Commission delisted the following segments from the 303(d) List or the M&E List for exceedances of the temperature standards:

- Bear Creek segment 1e, Bear Creek from the outlet of Evergreen Lake to Kerr/Swede Gulch (COSPBE01e)
- Upper South Platte segment 2a, Salt Creek (COSPUS02a)
- Eagle River segment 9a, Eagle River from Berry Creek to confluence with Ute Creek (COUCEA09a)
- Eagle River segment 9a, Eagle River from Ute Creek to confluence with Rube Creek (COUCEA09a)
- Upper Colorado segment 10c (COUCUC10c)
- Yampa River segment 2c (COUCYA02c)
- Bear Creek segment 1a, Bear Creek from Witter Gulch to Evergreen Lake (COSPBE01a)

The Commission moved the following segment from the 303(d) List to the M&E List for exceedances of the temperature standards:

- Big Thompson segment 8 (COSPBT08)
- 9. Listings Due to Exceedances of the Secondary Water Supply Standards

For the secondary water supply standards of dissolved iron, manganese and sulfate, the less restrictive of the following two options apply as the numeric standard: existing quality as of January 1, 2000 or the table value criteria in Regulation No. 31, Tables II and III. For dissolved iron, the table value standard (TVS) is 300 ug/l. For dissolved manganese, the TVS is 50 ug/l. For sulfate, the TVS is 250 mg/l.

In the 2016 303(d) Listing Methodology, the Commission included additional language regarding the determination of existing quality from the year 2000. This included a minimum data requirement of ten data points, and the ability to use data collected after the year 2000 when characterizing existing quality from 2000. However, pursuant to section 31.11(6) of Regulation 31, the use of data collected after 2000 may only be used upon a showing that there are no new or increased sources of these pollutants in the segment being assessed since 2000.

Some issues were raised regarding whether the data should be assessed station by station when comparing concentrations from 2000 to current conditions or can data be aggregated for the entire segment (or a portion of the segment). The Commission determined that unless a good reason was presented to assess station to station, data should be combined and assessed to characterize water quality as of 2000 and current conditions for manganese, dissolved iron and sulfate.

In the following segments, the TVS was less restrictive than water quality as of the year 2000. Therefore, the TVS was used as the standard for these listing decisions. The Commission added the following segments to the 303(d) List:

- Middle Arkansas segment 2, mainstem of the Arkansas River from Pueblo Reservoir to Blue Ribbon Creek: manganese (COARMA02)
- Lower Yampa/Green River segment 3c, Wilson Creek: sulfate (COLCLY03c)
- Boulder Creek segment 2a, Como Creek to the confluence of North Boulder Creek: dissolved iron (COSPBO02a)
- Big Thompson segment 8, From source to St Vrain Supply Canal: sulfate

(COSPBT08)

- Cache la Poudre segment 7: manganese (COSPCP07)
- Cache la Poudre segment 13a, Dry Creek: manganese and sulfate (COSPCP13a)
- Middle South Platte segment 1b: manganese (COSPMS01b)
- Upper Colorado segment 7a, Alkali Slough: sulfate (COUCUC07a)

In the following segments, the existing quality as of 2000 was greater (less restrictive) than the TVS. Therefore, the water quality representative of 2000 was used as the standard for these listing decisions. The Commission added the following segments to the 303(d) List:

- Fountain Creek segment 1a, Mainstem: manganese (COARFO01a)
- Lower Arkansas segment 1b: manganese (COARLA01b)
- Lower Arkansas segment 1c: manganese (COARLA01c)
- Lower Arkansas segment 4a: sulfate (COARLA04a)
- Middle Arkansas segment 6b: manganese and sulfate (COARMA06b)
- Lower Colorado segment 14c: manganese (COLCLC14c)
- Lower Yampa segment 3c, Stinking Gulch: sulfate (COLCLY03c)
- Clear Creek segment 2c, Turkey Gulch below Rockford Tunnel: manganese and dissolved iron (COSPCL02c)
- Upper South Platte segment 3, Trout Creek and tributaries on USFS property: manganese (COSPUS03)
- Upper South Platte segment 5b, Geneva Creek: manganese (COSPUS05b)
- Blue River segment 06a: manganese (COUCBL06a)
- Eagle River segment 5c: dissolved iron (COUCEA05c)
- North Platte segment 4a, Snyder Creek: manganese and dissolved iron (COUCNP04a)
- Upper Colorado segment 10c, below Fraser Canyon: dissolved iron (COUCUC10c)

In the following segments, the TVS was less restrictive than water quality as of the year 2000. Therefore, the TVS was used as the standard for these listing decisions. The Commission added the following segments to the M&E List:

- Middle Arkansas segment 6a: manganese (COARMA06a)
- Upper Arkansas segment 38, Skagway Reservoir: dissolved iron (COARUA38)
- Upper Gunnison segment 29a, Lake Fork of the Gunnison upstream of Cottonwood Creek: manganese (COGUUG29a)
- Lower Colorado segment 4a: sulfate (COLCLC04a)
- Lower Yampa/Green River segment 3c, Wilson Creek: manganese (COLCLY03c)
- Lower Yampa/Green River segment 6: sulfate (COLCLY06)
- Lower White segment 9b: manganese (COLCWH09b)
- Lower White segment 13b, Corral Gulch: manganese (COLCWH13b)
- Alamosa River segment 20: dissolved iron (CORGAL20)
- Closed Basin segment 12a, Ford Creek: manganese (CORGCB12a)
- Rio Grande segment 2, South Clear Creek: dissolved iron (CORGRG02)
- Rio Grande segment 38, Big Meadows Reservoir: dissolved iron and manganese (CORGRG38)
- Rio Grande segment 38, Road Canyon Reservoir: dissolved iron (CORGRG38)
- Boulder Creek segment 2a, North Boulder Creek from Caribou Creek to the confluence with Como Creek: dissolved iron (COSPBO02a)
- Big Thompson segment 7, Buckhorn Creek: manganese (COSPBT07)
- Boulder Creek segment 2a, from the outlet of Barker Reservoir to Longitude:

105.475577°Latitude: 39.971275°: manganese (COSPBO02a)

- Cherry Creek segment 1: manganese (COSPCH01)
- Clear Creek segment 3b, Leavenworth Creek: manganese (COSPCL03b)
- Clear Creek segment 6, North Empire Creek: sulfate (COSPCL06)
- Clear Creek segment 12a, Gilson Gulch and tributaries: dissolved iron, manganese, and sulfate (COSPCL12a)
- Cache la Poudre segment 7: dissolved iron (COSPCP07)
- Laramie River segment 2a: manganese (COSPLA02a)
- St. Vrain segment 4a, (Hwy 72 to James Creek): manganese (COSPSV04a)
- North Platte segment 3: dissolved iron (COUCNP03)
- Yampa River segment 18, South Fork Little Snake River: dissolved iron (COUCYA18)

In the following segments, the existing quality as of 2000 was greater (less restrictive) than the TVS. Therefore, the water quality representative of 2000 was used as the standard for these listing decisions. The Commission added the following segments to the M&E List:

- Lower Arkansas segment 2a: manganese and sulfate (COARLA02a)
- Middle Arkansas segment 6b: sulfate (COARMA06b)
- Upper Arkansas segment 5, Lake Fork below Sugarloaf Dam to the confluence with the Arkansas River and Colorado Gulch: manganese (COARUA05)
- Upper Arkansas segment 38, Skagway Reservoir: manganese (COARUA38)
- Lower Colorado segment 2b, Humphrey Backwater area: manganese and sulfate (COLCLC02b)
- Lower Yampa/Green River segment 3e: sulfate (COLCLY03e)
- Lower Yampa/Green River segment 6: manganese (COLCLY06)
- White River segment 13b, Stake Springs: sulfate (COLCWH13b)
- Alamosa River segment 2: dissolved iron and manganese (CORGAL02)
- Closed Basin segment 9a, Squirrel Creek: manganese (CORGCB09a)
- Rio Grande segment 4c: manganese (CORGRG04c)
- Clear Creek segment 6, North Empire Creek: dissolved iron (COSPCL06)
- Lower South Platte segment 1: sulfate (COSPLS01)
- Middle South Platte segment 1a: manganese (COSPMS01a)
- Blue River segment 12: manganese (COUCBL12)
- North Platte segment 4a, Canadian River: manganese (COUCNP04a)
- North Platte segment 4a, Illinois River: dissolved iron (COUCNP04a)
- North Platte segment 4b, Illinois River: manganese (COUCNP04b)
- North Platte segment 5b: dissolved iron and manganese (COUCNP05b)

In the following segments, there was not enough data available to characterize the water quality representative of the year 2000. Until additional information can be gathered to make a determination on the water quality as a 2000, the Commission added the following segments to the M&E List:

- Middle Arkansas segment 6a: sulfate (COARMA06a)
- Middle Arkansas segment 9: manganese (COARMA09)
- Middle Arkansas segment 11b: manganese (COARMA11b)
- Closed Basin segment 2a, North Fork Carnero Creek: manganese (CORGCB02a)
- Closed Basin segment 2a, South Fork Carnero Creek: dissolved iron and manganese (CORGCB02a)
- Closed Basin segment 2b, La Garita Creek: dissolved iron and manganese (CORGCB02b)
- Closed Basin segment 2c: manganese (CORGCB02c)
- Clear Creek segment 14b: dissolved iron (COSPCL14b)

- Boulder Creek segment 14, Barker Reservoir: dissolved iron, manganese (COSPBO14)
- Blue River segment 20, Spruce Creek: dissolved iron (COUCBL20)
- Upper Colorado segment 7a, Alkali Slough: manganese (COUCUC07a)
- Yampa River segment 3, Little Morrison Creek: manganese (COUCYA03)

For the following segments, existing 303(d) and M&E listings for exceedances of the secondary water supply standards were retained:

- Coal Creek segment 11: manganese (COGUUG11)
- Clear Creek segment 14b: manganese (COSPCL14b)
- Lower South Platte segment 1: manganese (COSPLS01)
- St. Vrain segment 5, Left Hand Creek below US 36 to a point above the Lefthand Feeder Canal: manganese (COSPSV05)
- North Platte segment 4a, Canadian River: dissolved iron (COUCNP04a)
- Yampa segment 2a, Yampa River below Stagecoach: manganese (COUCYA02a)
- 10. Listings Due to Exceedances of the Water Supply Standards for Arsenic and Nitrite

The 2016 303(d) Listing Methodology was modified to reflect changes in Regulation #31 for the assessment of arsenic, nitrite and nitrate. Previously, the assessment of arsenic, nitrite and nitrate water supply standards was solely conducted at the point of intake for a water supply. This provision was removed in the Regulation #31, resulting in the assessment of these standards throughout the entire segment.

Based on comments received from parties regarding the arsenic listings the Commission reiterates the following Commission decisions. The source of a pollutant is not considered during the listing analysis, and the Commission recommends that parties who believe that impairments are the result of high background levels of arsenic consider site-specific regulatory changes, such as site-specific standards or removal of a classified use through a use attainability analysis. Attainment is assessed against the underlying standard, not against a temporary modification. Data for dissolved arsenic may be used in determining attainment of total arsenic.

For arsenic listings the Commission determined that the Division may use "j data" in its assessment. "J data" is an analytical result that falls between the method detection limit ("MDL") and the minimum level ("ML"). The arsenic water supply standard ($0.02\mu g/L$) is below the MDL for arsenic (with the lowest MDL in data assessed for this rulemaking hearing at $0.022 \mu g/L$). J data may be used in assessing arsenic because a j data result means that the lab is 99% certain arsenic is present in the sample at a level higher than the MDL, which is higher than the standard for arsenic.

The Commission added the following segments to the 303(d) List for exceedances of the arsenic standard:

- Fountain Creek segment 1a, Mainstem (COARFO01a)
- Lower Arkansas segment 1b (COARLA01b)
- Lower Arkansas segment 1c (COARLA01c)
- Lower Arkansas segment 5a (COARLA05a)
- Lower Arkansas segment 5b (COARLA05b)
- Lower Arkansas segment 9a (COARLA09a)
- Middle Arkansas segment 3 (COARMA03)
- Middle Arkansas segment 9 (COARMA09)
- Upper Arkansas segment 2c (COARUA02c)
- Upper Arkansas segment 05, Colorado Gulch (COARUA05)

- Upper Arkansas segment 15 (COARUA15)
- North Fork of the Gunnison segment 4, Ruby Anthracite Creek (COGUNF04)
- Upper Gunnison segment 12, Coal Creek (COGUUG12)
- Lower Colorado segment 1, Colorado River from Roaring Fork confluence to confluence with Paradise Creek (COLCLC01)
- Lower Colorado segment 4c (COLCLC04c)
- Lower Colorado segment 10 (COLCLC10)
- Lower Colorado segment 15a (COLCLC15a)
- Lower Colorado segment 15c (COLCLC15c)
- Lower Yampa segment 3c, Stinking Gulch (COLCLY03c)
- White River segment 7, White River below Meeker (COLCWH07)
- White River segment 12 (COLCWH12)
- White River segment 14a, Piceance Creek (COLCWH14a)
- White River segment 20, Black Sulphur Creek (COLCWH20)
- White River segment 21 (COLCWH21)
- Closed Basin segment 2a, North Fork Carnero Creek and South Fork Carnero Creek (CORGCB02a)
- Closed Basin segment 2b, La Garita Creek (CORGCB02b)
- Closed Basin segment 2c (CORGCB02c)
- Closed Basin segment 4 (CORGCB04)
- Closed Basin segment 9b (CORGCB09b)
- Closed Basin segment 12a (CORGCB12a)
- Rio Grande segment 4b, South Fork Rio Grande to Del Norte (CORGRG04b)
- Rio Grande segment 4c (CORGRG04c)
- Rio Grande segment 09, North Branch of Pass Creek (CORGRG09)
- Rio Grande segment 11 (CORGRG11)
- Rio Grande segment 19 (CORGRG19)
- Bear Creek segment 2 (COSPBE02)
- Boulder Creek segment 2a (COSPBO02a)
- Boulder Creek segment 2b (COSPBO02b)
- Boulder Creek segment 3 (COSPBO03)
- Boulder Creek segment 4b (COSPBO04b)
- Boulder Creek segment 9 (COSPBO09)
- Boulder Creek segment 10 (COSPBO10)
- Boulder Creek segment 14, Barker Reservoir (COSPBO14)
- Big Thompson segment 1 (COSPBT01)
- Big Thompson segment 2 (COSPBT02)
- Big Thompson segment 3 (COSPBT03)
- Big Thompson segment 7, Buckhorn Creek and North Fork of Big Thompson (COSPBT07)
- Big Thompson segment 8 (COSPBT08)
- Cache la Poudre segment 2a (COSPCP02a)
- Cache la Poudre segment 6 (COSPCP06)
- Cache la Poudre segment 9 (COSPCP09)
- Cache la Poudre segment 10a (COSPCP10a)
- Cache la Poudre segment 10b (COSPCP10b)
- Middle South Platte segment 1b (COSPMS01b)
- Republican Basin segment 1 (COSPRE01)
- St. Vrain segment 2b (COSPSV02b)
- Saint Vrain segment 7, Boulder Reservoir (COSPSV07)
- Upper South Platte segment 2c, South Mosquito Creek (COSPUS02c)
- Upper South Platte segment 10a, East Plum Creek (COSPUS10a)
- Blue River segment 2c (COUCBL02c)
- Blue River segment 4a, Gold Run Gulch below Jessie Mine (COUCBL04a)
- Blue River segment 20, Spruce Creek (COUCBL20)
- Eagle River segment 2 (COUCEA02)

- Eagle River segment 5c (COUCEA05c)
- Eagle River segment 6 (COUCEA06)
- Eagle River segment 9a (COUCEA09a)
- Eagle River segment 9c (COUCEA09c)
- North Platte segment 1, South Fork Big Creek (COUCNP01)
- North Platte segment 4a, Illinois River, South Fork Big Creek and Snyder Creek (COUCNP04a)
- North Platte segment 4b, Illinois River (COUCNP04b)
- North Platte segment 5b (COUCNP05b)
- North Platte segment 09, Lake John and North Delaney Lake (COUCNP09)
- Upper Colorado segment 7a, Muddy Creek (COUCUC07a)
- Upper Colorado segment 7b, Muddy Creek (COUCUC07b)
- Upper Colorado segment 10c (COUCUC10c)
- Upper Colorado segment 12, Shadow Mountain Reservoir (COUCUC12)
- Yampa River segment 2a, Yampa River above Stagecoach Reservoir (COUCYA02a)
- Yampa River segment 2b (COUCYA02b)
- Yampa River segment 3, Little Morrison Creek and Gunn Creek (COUCYA03)
- Yampa River segment 15, Elkhead Creek (COUCYA15)

The Commission added the following segments to the M&E List for potential nonattainment of the arsenic standard:

- Middle Arkansas segment 11b (C)OARMA11b)
- Lower Arkansas segment 10, Adobe Creek Reservoir (COARLA10)
- Upper Arkansas segment 35 (COARUA35)
- Upper Arkansas segment 38, Skagway Reservoir (COARUA38)
- Lower Dolores segment 5, Mesa Creek and tributaries (COGULD05)
- Lower Colorado segment 2b, Humphrey Backwater area (COLCLC02b)
- Lower Colorado segment 14c (COLCLC14c)
- Lower Colorado segment 20, Rifle Gap Reservoir (COLCLC20)
- Bear Creek segment 11, Harriman Reservoir (COSPBE11)
- Cache la Poudre segment 7 (COSPCP07)
- Laramie segment 2a (COSPLA02a)
- Laramie segment 2b (COSPLA02b)
- Alamosa River segment 20 (CORGAL20)
- Rio Grande segment 37 (CORGRG37)
- Upper South Platte segment 12, Jackson Creek (COSPUS12)
- Blue River segment 12 (COUCBL12)
- Eagle River segment 9b (COUSEA09b)
- North Platte segment 4a, Grizzly Creek and Little Grizzly Creek (COUSNP04a)
- Upper Colorado segment 3, Lake Granby to Gore Canyon (COUCUC03)
- Upper Colorado segment 12, Willow Creek Reservoir (COUCUC12)
- Yampa River segment 18, South Fork of the Little Snake River (COUCYA18)
- Upper Gunnison segment 29a, Lake Fork of the Gunnison River Upstream of Cotonwood Creek (COGUUG29a)
- Yampa River segment 8, Lost Dog Creek (COUCYA08)

The Commission retained the following segments on the 303(d) List for exceedances of the arsenic standard:

- Upper Gunnison segment 09, Coal Creek (COGUUG09)
- Upper Gunnison segment 11, Elk Creek (COGUUG11)
- Upper Gunnison segment 11, Coal Creek (COGUUG11)
- Big Thompson segment 11 (COSPBT11)

- Cache la Poudre segment 14 (COSPCP14)
- Upper South Platte segment 3, Fourmile Creek (COSPUS03)
- Upper South Platte segment 3, Pine Creek (COSPUS03)
- Upper South Platte segment 14 (COSPUS14)
- Upper South Platte segment 17a, Berkeley Lake (COSPUS17a)

The Commission retained the following segment on the M&E List for exceedances of the arsenic standard:

Upper South Platte segment 03, West Creek (COSPUS03)

The Commission retained the following segment on the M&E List for exceedances of the nitrite standard:

Middle Arkansas segment 4a (COARMA04a)

The Commission added the following segment to the M&E List for exceedances of the nitrite standard:

Lower Colorado segment 2b, Humphrey Backwater Area (COLCLC02b)

The Commission delisted the following segments as they are attaining the arsenic standard:

- Upper Arkansas segment 20, North Fork Wilson Creek below Independence Mine (COARUA20)
- Saint Vrain segment 4c (COSPSV04c)
- 11. Listings Due to Exceedances of the Total Phosphorus Standards

In May 2012, the Commission adopted nutrient control management regulations, as detailed in Regulation 85 and Regulation 31. Interim total nitrogen and total phosphorus values were included in Regulation 31, and as the Commission revises basin regulations, the interim value for total phosphorus is adopted as a numeric standard in waters upstream of domestic wastewater treatment facilities. A list of such dischargers has been included in each of the basin regulations. At the time of this hearing, the total phosphorus standard has been adopted in the upstream waters of the following basins: Upper Colorado, Lower Colorado, Arkansas, and Rio Grande.

For the 2016 303(d) Listing Methodology, the Commission outlined the assessment methodology for numeric nutrient standards. The ambient annual median is assessed against the numeric standard, with an allowable exceedance frequency of one in five years. If the annual median nutrient concentration exceeds the standard but fewer than five samples are available for a specific year, the segment should be included on the M&E until additional data can be collected.

The following segments have been included on the M&E list for exceeding the numeric total phosphorus standard but not meeting sample size requirements.

- Lower Colorado segment 4a (COLCLC04a)
- Closed Basin segment 2a, North Fork Carnero Creek (CORGCB02a)
- Closed Basin segment 2a, South Fork Carnero Creek (CORGCB02a)
- Closed Basin segment 2b, La Garita Creek (CORGCB02b)
- Closed Basin segment 2c (CORGCB02c)
- Closed Basin segment 12a (CORGCB12a)

- Rio Grande segment 11 (CORGRG11)
- Rio Grande segment 19 (CORGRG19)
- Rio Grande segment 20a (CORGRG20a)
- Rio Grande segment 20b (CORGRG20b)

12. Delisting of Segments with Recently Approved TMDLs

The Division submitted 11 TMDLs to EPA since the approval of the 2012 303(d) List that have been approved. The Commission has removed the following segments from the 303(d) List:

- Upper Arkansas segment 8b, Iowa Gulch: cadmium, lead, and zinc (COARUA08b)
- Lower Gunnison segment 9, Fruitgrowers Reservoir: dissolved oxygen (COGULG09)
- Alamosa segment 8, Terrace Reservoir: total recoverable iron (CORGAL08)
- La Plata segment 4a, East Mancos: copper and manganese (COSJLP04a)
- Middle South Platte segment 4, Barr Lake and Milton reservoir: pH and DO (COSPMS04)
- Saint Vrain segment 4a, Left Hand Creek from Hwy 72 to James Creek: copper, zinc, and pH (COSPSV04a)
- Saint Vrain segment 4b: copper and lead (COSPSV04b)
- Saint Vrain segment 4c: copper (COSPSV04c)

Delisting of Segments where Water Quality is Currently Meeting Standards

As additional water quality data is collected and assessed, new data may show attainment of the standards. The Commission removed the following segments and parameters from the 303(d) List due to attainment of current water quality standards:

- Fountain Creek segment 7a, Willow Springs Ponds #1 & #2: Aquatic life use (tetrachloroethylene fish tissue) (COARFO07a)
- Lower Arkansas segment 1a: selenium, sulfate (COARLA01a)
- Lower Arkansas segment 4a, Timpas Creek: total recoverable iron (COARLA04a)
- Lower Arkansas segment 7: selenium (COARLA07)
- Lower Arkansas segment 9b, Chicosa Creek: total recoverable iron, selenium (COARLA09b)
- Middle Arkansas segment 6a: selenium (COARMA06a)
- Middle Arkansas segment 14: selenium (COARMA14)
- Upper Arkansas segment 20, Wilson Creek below Independence Mine: arsenic (COARUA20)
- Upper Arkansas segment 40: dissolved oxygen (COARUA40)
- Lower Gunnison segment 9: dissolved oxygen (COGULG09)
- Upper Gunnison segment 29a, Lake Fork between Cooper and Silver Creeks: aquatic life (provisional) (COGUUG29a)
- Lower Colorado segment 10: selenium (COLCLC10)
- Lower Colorado segment 13b, Adobe Creek, Leach Creek: total recoverable iron (COLCLC13b)
- Lower Yampa segment 2: total recoverable iron (COLCLY02)
- Lower Yampa segment 5: selenium (COLCLY05)
- White River segment 14a, Willow Creek to Hunter Creek: total recoverable iron (COLCWH14a)
- Alamosa segment 3b, Alamosa River above Jasper Creek: cadmium (CORGAL03b)
- Alamosa segment 8, Terrace Reservoir: total recoverable iron (CORGAL08)

- Rio Grande segment 7, Nelson Creek, West Willow Creek below Nelson Creek to East Willow Creek: pH (CORGRG07)
- Rio Grande segment 37: dissolved oxygen (CORGRGR37)
- Big Dry segment 1: selenium (COSPBD01)
- Bear Creek segment 2, below Kipling Parkway: E. coli (COSPBE02)
- Bear Creek segment 5, Swede/Kerr Gulch: *E. coli* (COSPBE05)
- Big Thompson segment 2: cadmium, zinc, copper (from downstream of the UTSD discharge) (COSPBT02)
- Big Thompson segment 8: dissolved oxygen (COSPBT08)
- Big Thompson segment 9: copper (COSPBT09)
- Big Thompson segment 10, Big Hollow: selenium (COSPBT10)
- Cherry Creek segment 3: selenium (COSPCH03)
- Cherry Creek segment 3, Cherry Creek from Holly Street to the South Platte River: total recoverable iron (COSPCH03)
- Clear Creek segment 2b: cadmium (COSPCL02b)
- Clear Creek segment 6, Mad Creek: zinc (COSPCL06)
- Clear Creek segment 15: manganese (COSPCL15)
- Cache la Poudre segment 8: arsenic (COSPCP08)
- Cache la Poudre segment 10a: copper (COSPCP10a)
- Cache la Poudre segment 11: selenium (COSPCP11)
- Cache la Poudre segment 12: selenium (COSPCP12)
- Cache la Poudre segment 13a: selenium (COSPCP13a)
- Cache la Poudre segment 14: copper (COSPCP14)
- Middle South Platte segment 1b: selenium (COSPMS01b)
- Middle South Platte segment 7, Prospect Lake: dissolved oxygen (COSPMS07)
- Republican River segment 4: E.coli (COSPRE04)
- St. Vrain segment 2a: zinc (COSPSV02a)
- St. Vrain segment 2b: copper (COSPSV02b)
- St. Vrain segment 6: selenium (COSPSV06)
- Upper South Platte segment 17a, Duck Lake: dissolved oxygen (COSPUS17a)
- Upper South Platte segment 17b, Sloan's Lake: dissolved oxygen (COSPUS17b)
- Upper South Platte segment 23, Garfield and Huston Lakes: dissolved oxygen (COSPUS23)
- North Platte segment 4b, Illinois River: total recoverable iron (COUCNP04b)
- North Platte segment 9, Lake John: dissolved oxygen (COUCNP09)
- Upper Colorado segment 3, from 578 Rd Bridge to Blue River: manganese (COUCUC03)
- Yampa River segment 13d, Below Seneca sample location 8 (WSD5): selenium (COUCYA13d)

The Commission removed the following segments and parameters from the M&E List due to attainment of current water quality standards:

- Middle Arkansas segment 6a: uranium (COARMA06a)
- Middle Arkansas segment 6b: uranium (COARMA06b)
- Middle Arkansas segment 7b: copper, zinc (COARMA07b)
- Middle Arkansas segment 9: selenium (COARMA09)
- San Miguel segment 12a, Calamity Draw: dissolved oxygen (COGUSM12a)
- Lower Colorado segment 4a, Alkali Creek: *E. coli* , copper, total recoverable iron, lead, zinc (COLCLC04a)
- Lower Colorado segment 4c: copper and selenium (COLCLC04c)
- Lower Colorado segment 13b, Indian Wash: total recoverable iron (COLCLC13b)
- Lower Colorado segment 15a, Plateau Creek: selenium (COLCLC15a)
- Lower Yampa segment 3c, Stinking Gulch: copper, zinc (COLCLY03c)
- Lower Yampa segment 3c, Wilson Creek: selenium (COLCLY03c)
- Lower Yampa segment 18: E.coli, total recoverable iron, selenium (COLCLY18)

- White River segment 7, White River below Meeker: copper (COLCWH07)
- White River segment 9a, Strawberry Creek: copper, zinc (COLCWH09a)
- White River segment 23, East Douglas Creek: total recoverable iron (COLCWH23)
- White River segment 10b, Coal Creek below Ninemile Gulch: selenium (COLCWH10b)
- Closed Basin segment 9a, Squirrel Creek: cadmium, copper, zinc, total recoverable iron (CORGCB09a)
- Blue River segment 20, Spruce Creek: total recoverable iron (COUCBL20)
- Boulder Creek segment 1: lead, zinc (COSPBO01)
- Boulder Creek segment 2a: cadmium, copper (COSPBO02a)
- Boulder Creek segment 2b: cadmium, copper (COSPBO02b)
- Boulder Creek segment 3: cadmium, copper (COSPBO03)
- Boulder Creek segment 9: cadmium (COSPBO09)
- Boulder Creek segment 10: cadmium (COSPBO10)
- Doubler Creek segment 14. Devider December and and
- Boulder Creek segment 14, Boulder Reservoir: cadmium (COSPBO14)
- Big Thompson segment 2: sulfide (COSPBT02)
- Big Thompson segment 6, Dry Creek: E. coli (COSPBT06)
- Cherry Creek segment 6, Lollipop Lake: selenium (COSPCH06)
- Clear Creek segment 6, Mad Creek: pH (COSPCL06)
- Clear Creek segment 6, Hoop Creek: cadmium, lead, zinc (COSPCL06)
- Clear Creek segment 9a, Fall River: zinc, dissolved oxygen (COSPCL09a)
- Clear Creek segment 15: lead (COSPCL15)
- Cache la Poudre segment 6: copper (COSPCP06)
- Cache la Poudre segment 9: cadmium, lead (COSPCP09)
- Lower South Platte segment 3, Jackson Reservoir: selenium (COSPLS03)
- North Platte segment 1, South Fork Big Creek: copper, *E. coli* (COUCNP01)
- North Platte segment 4a, Little Grizzly Creek: *E. coli*, total recoverable iron (COUCNP04a)
- North Platte segment 4a, Grizzly Creek, Little Grizzly Creek: Aquatic Life Use (COUCNP04a)
- North Platte segment 4a, Lake Creek: pH (COUCNP04a)
- Roaring Fork segment 3a, Capitol Creek: selenium (COUCRF03a)
- Roaring Fork segment 10, Thompson Creek: total recoverable iron (COUCRF10)
- St. Vrain segment 13, Lake Thomas: dissolved oxygen (COSPSV13)
- Upper Colorado segment 10c. Fraser River: copper. lead (COUCUC10c)
- Upper Colorado segment 10c, from Town of Fraser to Colorado River: copper (COUCUC10c)
- Upper Colorado segment 10c, from Town of Tabernash to Town of Granby: lead (COUCUC10c)
- Upper South Platte segment 12, Jackson Lake: lead (COSPUS12)
- Upper South Platte segment 17a, Rocky Mountain Lake and Grasmere Lake: copper (COSPUS17a)
- Upper South Platte segment 17b, Sloan's Lake: total recoverable iron (COSPUS17b)
- Upper South Platte segment 23, Aqua Golf: total recoverable iron (COSPUS23)
- Yampa segment 2a, Yampa River below Stagecoach: selenium (COUCYA02a)
- Yampa segment 3, Little Morrison Creek: zinc, dissolved iron (COUCYA03)
- Yampa segment 3, Walton Creek: manganese (COUCYA03)
- Yampa River segment 13d, Dry Creek below Routt County Rd 53: lead and E.coli (COUCYA13d)
- Delisting of Segments where Water Quality is Currently Meeting Ambient Based Standards

The Commission adopted a new assessment methodology in the 2016 Listing Methodology to evaluate ambient based standards. This methodology uses a statistical approach based on the concept of the confidence interval to minimize uncertainty of assessment conclusions. The following segments were delisted due to attainment of ambient based standards using the new assessment methodology for ambient based standards:

- Middle Arkansas segment 4a: selenium (COARMA04a)
- Middle Arkansas segment 6a: selenium (COARMA06a)
- 15. Listing of Segments where Water Quality is not Meeting Standards not identified above

The following segments or parameters were added to the 303(d) List due to exceedances of water quality standards not identified above:

- Fountain Creek segment 3b: copper (COARFO03b)
- Fountain Creek segment 4, Sand Creek: selenium (COARFO04)
- Lower Arkansas segment 1a, *E. coli* (COARLA01a)
- Lower Arkansas segment 9b, Big Sandy Creek: total recoverable iron (COARLA09b)
- Lower Arkansas segment 10, Nee Gronda: selenium (COARLA10)
- Lower Arkansas segment 12, Lake Meredith: selenium (COARLA12)
- Middle Arkansas segment 3: selenium (COARMA03)
- Middle Arkansas segment 14: total recoverable iron (COARMA14)
- Upper Arkansas segment 4a: copper (COARUA04a)
- Upper Arkansas segment 5, Lake Fork below Sugarloaf Dam: zinc (COARUA05)
- Upper Arkansas segment 5, Colorado Gulch: cadmium, copper, zinc (COARUA05)
- Upper Arkansas segment 12a: cadmium (COARUA12a)
- Uncompander segment 9, Imogene Creek: cadmium and zinc (COGUUN09)
- Lower Colorado segment 4a, Mamm Creek: total recoverable iron (COLCLC04a)
- Lower Colorado segment 4a, South Canyon Creek above Hot Springs: total recoverable iron (COLCLC04a)
- Lower Colorado segment 13b: total recoverable iron (COLCLC13b)
- Lower Colorado segment 14c, Roan Creek: total recoverable iron (COLCLC14c)
- Lower Yampa segment 3c, Wilson Creek: total recoverable iron (COLCLY03c)
- Lower Yampa segment 3c, Stinking Gulch: selenium (COLCLY03c)
- Closed Basin segment 3, Willow Creek: copper (CORGCB03)
- Closed Basin segment 12a: total recoverable iron (CORGCB12a)
- Rio Grande segment 2, South Clear Creek: total recoverable iron (CORGRG02)
- Rio Grande segment 4a: lead (CORGRG04a)
- Rio Grande segment 4c: copper (CORGRG04c)
- Rio Grande segment 7: cadmium, lead, zinc (CORGRG07)
- Rio Grande segment 9, North Branch of Pass Creek: zinc (CORGRG09)
- Big Dry Creek segment 1, Big Dry Creek downstream of Weld County Road 8: total recoverable iron (COSPBD01)
- Boulder Creek segment 2a, North Boulder Creek from Caribou Creek to the confluence with Como Creek: copper (COSPBO02a)
- Boulder Creek segment 2a, Como Creek to the confluence of North Boulder Creek: total recoverable iron (COSPBO02a)
- Boulder Creek segment 2a, North Boulder Creek to confluence of Caribou Creek: copper and lead (COSPBO02a)
- Boulder Creek segment 4a: copper (COSPBO04a)
- Boulder Creek segment 4b: copper (COSPBO04b)
- Boulder Creek segment 7b, below Rock Creek: selenium (COSPBO07b)
- Boulder Creek segment 9: E. coli (COSPBO09)

- Boulder Creek segment 10: pH (COSPBO10)
- Boulder Creek segment 14, Barker Reservoir: copper (COSPBO14)
- Big Thompson segment 2, from RMNP to above UTSD discharge: copper (CPSPBT02)
- Cherry Creek segment 2: chlorophyll and dissolved oxygen (COSPCH02)
- Cherry Creek segment 4a, Goldsmith Gulch: *E. coli* and selenium (COSPCH04a)
- Cherry Creek segment 4a, McMurdo Gulch: dissolved oxygen (COSPCH04a)
- Cherry Creek segment 4b, Upper Windmill Creek: selenium (COSPCH04b)
- Clear Creek segment 2c, Turkey Gulch below Rockford Tunnel: copper, nickel, total recoverable iron, zinc (COSPCL02c)
- Clear Creek segment 5, from Hoop Creek to confluence with Clear Creek: copper (COSPCL05)
- Clear Creek segment 6, Mad Creek: copper (COSPCL06)
- Clear Creek segment 6, North Empire Creek: copper (COSPCL06)
- Clear Creek segment 12a, Gilson Gulch and tributaries: cadmium, copper, nickel, lead, selenium and zinc (COSPCL12a)
- Clear Creek segment 12a, all tributaries except Gilson Gulch: cadmium, copper, and zinc (COSPCL12a)
- Clear Creek segment 15: ammonia (COSPCL15)
- Cache la Poudre segment 11: E. coli (COSPCP11)
- Cache la Poudre segment 13b: E. coli (COSPCP13b)
- Laramie segment 2b: copper (COSPLA02b)
- Lower South Platte segment 1: uranium (COSPLS01)
- Lower South Platte segment 3, North Sterling: dissolved oxygen and selenium (COSPLS03)
- Middle South Platte segment 1b: E. coli (COSPMS01b)
- St. Vrain segment 3: *E. coli* (COSPSV03)
- St. Vrain segment 5, Left Hand Creek: pH (COSPSV05)
- St. Vrain segment 6, Dry Creek: selenium (COSPSV06)
- Upper South Platte segment 2c, South Mosquito Creek: cadmium (COSPUS02c)
- Upper South Platte segment 3, Trout Creek and tributaries: dissolved oxygen and pH(COSPUS03)
- Upper South Platte segment 5b, Geneva Creek: pH(COSPUS05b)
- Upper South Platte segment 10a, Plum Creek: E. coli(COSPUS10a)
- Upper South Platte segment 16c: E. coli(COSPUS16c)
- Upper South Platte segment 16i: E. coli(COSPUS16i)
- Upper South Platte segment 16i, Sand Creek from Westerly Creek to the South Platte River: selenium (COSPUS16i)
- Upper South Platte segment 17a, Rocky Mountain Lake: dissolved oxygen (COSPUS17a)
- Upper South Platte segment 17a, Smith Lake: pH (COSPUS17a)
- Upper South Platte segment 17a, Grasmere Lake: ammonia (COSPUS17a)
- Upper South Platte segment 23, Garfield Lake: dissolved oxygen (COSPUS23)
- Upper South Platte segment 23, Agua Gulf: pH (COSPUS23)
- Upper South Platte segment 23, Parkfield Lake: pH (COSPUS23)
- Blue River segment 2a. above South Barton Gulch: zinc (COUCBL02a)
- Blue River segment 4a, Gold Run Gulch below Jessie Mine: zinc (COUCBL04a)
- Blue River segment 4a, Meadow Creek: copper (COUCBL04a)
- Blue River segment 6a: zinc (COUCBL06a)
- Blue River segment 12: zinc (COUCBL12)
- North Platte segment 4a, Snyder Creek: total recoverable iron (COUCNP04a)
- North Platte segment 9, Lake John: pH (COUCNP09)
- Upper Colorado segment 2, north inlet to Grand Lake: copper (COUCUC02)
- Upper Colorado segment 10a, Vasquez Creek: copper (COUCUC10a)
- Yampa segment 3, Little Morrison Creek: total recoverable iron (COUCYA03)

- Yampa segment 3, Gunn Creek: zinc (COUCYA03)
- Yampa segment 13h: selenium (COUCYA13h)

The following segments or parameters were added to the M&E List due to exceedances of water quality standards not identified above:

- Fountain segment 4, Little Fountain Creek below Deadman Canyon: selenium (COARFO04)
- Lower Arkansas segment 3a: E. coli (COARLA03a)
- Lower Arkansas segment 7: E. coli (COARLA07)
- Lower Arkansas segment 9a, Adobe Creek: total recoverable iron (COARLA09a)
- Lower Arkansas segment 12, Lake Henry: total recoverable iron (COARLA12)
- Middle Arkansas segment 11b: total recoverable iron (COARMA11b)
- Upper Arkansas segment 5, Lake Fork below Sugarloaf Dam: cadmium (COARUA05)
- Upper Arkansas segment 5, Colorado Gulch: silver, lead (COARUA05)
- Upper Gunnison segment 29a, Lake Fork of the Gunnison upstream of Cottonwood Creek: zinc and cadmium (COGUUG29a)
- Uncompander segment 9, Imogene Creek: copper (COGUUN09)
- Lower Colorado segment 3: selenium (COLCLC03)
- Lower Colorado segment 4e: total recoverable iron, copper, selenium and cadmium (COLCLC04e)
- Lower Colorado segment 13a, Sulphur Gulch: total recoverable iron, copper and lead (COLCLC13a)
- Lower Colorado segment 16: total recoverable iron (COLCLC16)
- Lower Yampa segment 3c, Wilson Creek: selenium (COLCLY03c)
- Lower Yampa segment 3e: selenium (COLCLY03e)
- White River segment 7, White River below Meeker: total recoverable iron (COLCWH07)
- Alamosa River segment 10: total recoverable iron (CORGAL10)
- Alamosa River segment 12: total recoverable iron (CORGAL12)
- Closed Basin segment 3, Cottonwood Creek: copper (CORGCB03)
- Closed Basin segment 3, Major Creek: total recoverable iron (CORGCB03)
- Closed Basin segment 5: copper (CORGCB05)
- Closed Basin segment 10, Sand Creek: copper (CORGCB10)
- Closed Basin segment 12a, Ford Creek: cadmium and zinc (CORGCB12a)
- Rio Grande segment 3: total recoverable iron (CORGRG03)
- Rio Grande segment 9, North Branch of Pass Creek: copper (CORGRG09)
- Rio Grande segment 25: copper (CORGRG25)
- Rio Grande segment 28, Upper Rito Seco below Battle Mountain: copper (CORGRG28)
- Rio Grande segment 33, Alberta Park: silver (CORGRG33)
- Rio Grande segment 38, Road Canyon: silver (CORGRG38)
- Boulder Creek segment 14, Barker Reservoir: silver (COSPBO14)
- Big Thompson segment 5: E. coli (COSPBT05)
- Big Thompson segment 10: dissolved oxygen (COSPBT10)
- Clear Creek segment 3b: cadmium (COSPCL03b)
- Clear Creek segment 6, North Empire Creek: cadmium, total recoverable iron, zinc (COSPCL06)
- Clear Creek segment 12a, Gilson Gulch and tributaries: pH (COSPCL12a)
- Clear Creek segment 12a, all tributaries except Gilson Gulch: dissolved oxygen (COSPCL12a)
- Clear Creek segment 14b: ammonia (COSPCL14b)
- Clear Creek segment 17b: E. coli (COSPCL17b)
- Cache la Poudre segment 7: silver (COSPCP07)
- Cache la Poudre segment 9: pH (COSPCP09)

- Cache la Poudre segment 12: pH (COSPCP12)
- St. Vrain segment 2b: silver(COSPSV02b)
- Upper South Platte segment 1a, Middle South Platte: pH (COSPUS01a)
- Upper South Platte segment 3, West Creek: total recoverable iron, dissolved oxygen (COSPUS03)
- Upper South Platte segment 23, Aqua Gulf: ammonia (COSPUS23)
- Upper South Platte segment 23, Harvey Lake: total recoverable iron (COSPUS23)
- Blue River segment 4a, Meadow Creek: zinc (COUCBL04a)
- Blue River segment 12: copper (COUCBL12)
- North Platte segment 4a, Illinois River: copper (COUCNP04a)
- North Platte segment 5b: copper (COUCNP05b)
- North Platte segment 6: copper (COUCNP06)
- Roaring Fork segment 2: copper (COUCRF02)
- Upper Colorado segment 8, below Kinney: copper (COUCUC08)
- Yampa segment 13j: selenium (COUCYA13j)
- 16. Site-specific decisions made by the Commission are discussed below.
 - a. Segments COARF001a, COARF002a, COARF002b, COARF003a COARF004 and COARF006 Waldo Canyon Fire and Storm Events

The Arkansas Fountain Coalition for Urban River Evaluation ("AF CURE") raised site-specific issues with listing segments that are within the geographic area that was affected by the Waldo Canyon Fire in 2012 and with using samples that are collected during or soon after storm events.

Data collected after the Waldo Canyon Fire was appropriately used to assess segments COARF001a, COARF002a, COARF002b, COARF003a COARF004 and COARF006. Any variability in data was alleviated through application of the nonparametric statistical analysis as included in the Listing Methodology; removal of data that was collected by USGS as part of a special study specifically looking at the effects of the fire; or by comparing attainment of water quality standards before and after the fire event, and where available listing those segments on the 303(d) list that were out of attainment prior to the fire event and out of attainment after the fire event (segments that were in attainment prior to the fire event were listed on the M&E list). Additionally, the Commission was uncertain whether two years is a sufficient period of time for macroinvertebrate communities to recover from the impacts of sedimentation that result from forest fires, and the time may vary based on the proximity to the fire, the amount of water flowing through the waterway, and other factors. The Commission anticipates that the next iteration of the Listing Methodology will address the complexity of listing fire, flood, or other catastrophic event impacts on streams to provide further guidance for these types of decisions, and also acknowledges that there may be many case specific determinations.

Condition Prior to Fire	Condition After Fire	Recommended Listing
Out of Attainment	Out of Attainment	List on 303(d) List
In Attainment	Out of Attainment	List on M & E List
Out of Attainment	In Attainment	Do not list

Based on USGS standard operating procedure, the Commission determined that sampling should not be conducted for four weeks following a significant flushing event. However, the data on the record for these segments was collected outside

of the four week window, and therefore was appropriately included in the assessment.

 Portion of segment COSPCL03a (South Clear Creek downstream of Lower Cabin Creek Reservoir to Clear Lake) - Category 4b Plan for Nonattainment of the Aquatic Life Use

Public Service Company of Colorado (PSCo) submitted a Category 4b Demonstration Plan (the Plan) to the Division for Clear Creek segment 3a in the South Platte River Basin, for the portion of the segment of South Clear Creek downstream of Lower Cabin Creek Reservoir to Clear Lake. Category 4b is an alternative to listing an impaired segment on the 303(d) list. A Category 4b Demonstration Plan, when implemented, must ensure attainment of all applicable water quality standards through pollution control mechanisms within a reasonable time period. The Plan was accepted by the U.S. Environmental Protection Agency prior to the rulemaking hearing. The Commission approved Public Service Company of Colorado's Category 4b Plan for segment COSPCL03a (South Clear Creek downstream of Lower Cabin Creek Reservoir to Clear Lake) and as a result, the Commission did not include Clear Creek segment 3a, South Clear Creek downstream of Lower Cabin Creek Reservoir to Clear Lake, on the 303(d) List for the aquatic life use, for which the Category 4b Demonstration Plan was written. PSCo will provide updates on the implementation of the Plan to the Commission in future 303(d) rulemaking hearings. The Commission expects that after a reasonable period of time as defined in the Category 4b Demonstration Plan, the aquatic life use be reexamined on this portion of Clear Creek segment 3a. If the aquatic life use is not attained by this time, the segment will be considered impaired and placed on the 303(d) List.

c. Segment COLCLC03 - Chronic Aquatic Life Use-based Selenium Standard

In 2012, the Commission removed Lower Colorado segment 3 from the 303(d) List for selenium impairment due to attainment of standards. At that time, USFWS opposed its removal from the list because the segment is critical habitat for the endangered Colorado pike minnow and razorback sucker. The Commission acknowledged the significance of this issue and recommended USFWS pursue an alternative standard in the next Colorado basin rulemaking; however, USFWS did not submit a proposal in 2014. In this rulemaking there was consensus that the acute selenium standard was attained; however, there was disagreement among the parties regarding whether the chronic selenium standard is attained due to uncertainty regarding the representativeness of a portion of the data set used in the assessment.

During 2012-2014, EPA and USFWS collected samples in segment 3 targeting critical habitat for the endangered fish. These samples were collected during low-flow periods from August to October. Colorado River Water Conservation District and the Colorado Stone, Sand and Gravel Association disagreed about whether the tributary-influenced sample locations and time periods are representative of conditions in the mainstem. Specifically, these parties argued that the majority of the data comes from poorly mixed sites located downstream of tributaries, and therefore is not representative of the spatial and temporal variability.

When the Commission adopts a standard it applies to the entire segment including areas of the segment that are under the influence of tributaries. The Listing Methodology excludes data collected within the mixing zone of a

discharge (as defined by Regulation 31), however it does not exclude data collected at the confluences of tributaries and river mainstems. Because selenium bio-accumulates in fish, the chronic selenium standard is designed to protect fish from cumulative life-long exposure. The default from the Listing Methodology is that data from the entire segment (including data at the confluences) is representative because the data represents the levels of selenium that aquatic food chain is exposed to through the segment.

However, where a sampling study targets a particular constituent in a portion of a segment, the data from that study may be skewed and may not be representative of the spatial and temporal nature of the whole segment. Here the Commission determined that it is unclear whether the data collected in the EPA and USFWS's study was representative of the entire segment, and therefore included segment 3 (COLCLCO3) on the 2016 M&E List for selenium.

The River District and the Colorado Stone Sand and Gravel Association have agreed to work with the Division, the Selenium Task Force, and other stakeholders to evaluate whether an alternative approach to a TMDL may be a more effective approach to achieving load reductions

d. COUCEA05c – Upstream Sources of Loading

Segment 5c on the Eagle River is located downstream of the Eagle Mine superfund site with a history of being impacted by the mine. Remedial activities conducted at the Eagle Mine superfund site beginning in the late 1980s resulted in reductions in metals loading and improved water quality in the Eagle River in the vicinity of the superfund site.

At the 2005 Regulation No. 33 rulemaking hearing (Reg. 33 RMH), the Commission adopted resegmentation of Eagle River segment 5 into segments 5a. 5b. and 5c. based on recognized changes in water quality, hardness, and use. In this rulemaking hearing, the Commission placed segment 5c on the 303(d) list for dissolved iron and total recoverable arsenic. Although it was argued that the upstream segments (segments 5a and 5b) should also be included on the 303(d) list as the primary source of contamination in segment 5c, segments 5a and 5b were not included in the Notice for this Rulemaking. The Commission finds that data collected in segment 5c which consisted of 123 total arsenic values with lower detection limits were representative of water quality conditions. The majority of data submitted to assess segments 5a and 5b. however, used a reporting limit of 15 ug/L for the water quality standard of 0.02 ug/L, and all such data were reported as non-detect (43 of the 65 values for segment 5a, and 79 of the 98 values for segment 5b). It is the Commission's intent that TMDLs for this segment 5c will consider upstream sources of loading occurring in the Eagle River as is the division's typical practice for TMDL development.

e. COUCNP04b – Total Recoverable Iron

Jackson County Water Conservancy District (District) proposed to remove the Illinois River (COUCNP04b) from the 303(d) List for total recoverable iron. The division assessed total recoverable iron for the Illinois River portion of the segment. After locational issues with sampling sites were resolved, the division concluded that the segment was in attainment of the total recoverable iron standard. The 50th percentile of the 10 total recoverable iron values for the portion was found to be 746 ug/L, a value less than the aquatic life standard of

1000 ug/L. Therefore, the data supported delisting of this portion and the Commission removed this segment from the 303(d) List for total recoverable iron.

f. COSPUS06a – Aquatic Life

Several parties raised issues with the representative nature of the aquatic life data for Upper South Platte segment 6a. Specifically they state that one data point is not enough to make a listing decision, that the location of the data point collected was not representative of the segments and that the 2003 EPA Standard Operating Procedure (SOP) for collecting benthic macroinvertebrate samples were not used. All of these issues are inconsistent with the Listing Methodology.

The Listing Methodology establishes the standard procedure for collecting macroinvertebrate data, which is the procedure established in Policy 10-1. The Commission reiterates that one data point is sufficient to include or remove a segment on the 303(d) List. Appendix B of the Listing Methodology ensures that samples are collected in stream reaches that are representative but does not necessarily prohibit sampling near areas of human disturbance. The Commission determined that both stations used in the assessment of segment 6a are located at a substantial and sufficient distance upstream from the nearest road or bridge crossing, which in this instance is a highway. Finally, the Commission determined that following the procedures in Policy 10-1 is the appropriate methodology, or standard operating procedure for collecting macroinvertebrate data.

The Commission determined that the data was representative and that segment 6a should be included on the 303(d) List provisionally. The Commission directs the division and interested parties to study this segment to determine the stressors and pollutants that are impacting aquatic life in this segment.

g. Indian Reservations

The Commission intends that the list of water quality-limited segments requiring total maximum daily loads shall apply to waters within the external boundaries of the Southern Ute Indian Reservation only to the extent that the state has jurisdiction, and is not attempting to resolve that jurisdictional issue here.

h. COSPUS10a E. coli

Chatfield Watershed Authority will continue its proactive monitoring program, including current *E. coli* data collection efforts. The Authority is in the early stages of the data analysis and interpretation. Any potential control measures will be based on data and science.

 i. COSPUS16h – Selenium in Toll Gate Creek, East Toll Gate Creek and West Toll Gate Creek

Toll Gate Creek, East Toll Gate Creek, and West Toll Gate Creek are meeting adopted ambient selenium standards. Toll Gate Creek, East Toll Gate Creek, and West Toll Gate Creek were resegmented from Upper South Platte segment 16c to segment 16h at the 2008 Temporary Modifications RMH but never formally delisted from the 303(d) List.

j. COUCNP04a – Sand Creek

State Line Ranch submitted a proposal as part of written public comment proposing that Sand Creek be listed as impaired for sediment due to impacts to a beneficial use. While the Commission found the evidence submitted to be persuasive and compelling evidence of impairment, the Commission was reluctant to list the segment as impaired in this hearing for a number of reasons. One reason was that the proposal was made late in the process and therefore the Division had not had an opportunity to thoroughly review and evaluate the proposal. In addition, potentially affected parties, such as the BLM and the affected local community, were not able to participate in the process. Also, because this would be the first time a segment would be listed for sediment impairing a beneficial use, the Commission would like to proceed thoughtfully to establish appropriate precedent about the factors to be considered in such a decision. Therefore, the Commission included the segment on the M&E List. A proposal may be made for a special hearing to consider this proposal, or that it may be proposed to be included on the 303(d) List as part the next 303(d) listing cycle.

PARTIES TO THE RULEMAKING HEARING

- 1. Public Service Company of Colorado
- 2. Jackson County Water Conservancy District
- 3. Bear Creek Watershed Association

3.905 ARRANGEMENT FOR CHILD CARE SERVICES [Em. eff. 12/4/15; Rev. eff. 3/1/16]

A. Adult Caretaker or Teen Parent Resources

Counties shall provide adult caretakers or teen parents with information on all available types of providers in the community: centers, family child care homes, qualified providers and in-home child care. This information can be provided through child care resource and referral agencies. In addition, counties shall provide adult caretakers with information as required by the state including, but not limited to, information regarding voter registration. In order to support families, counties may offer families referrals for health care coverage for their children, applications for food assistance benefits, housing information, and/or Low-Income Energy Assistance Program (LEAP) information.

B. Parental Fees

(12 CCR 2509-4)

[Instructions: replace the following section.]

7.301.24 Family Service Plan Out-of-Home Placement Documentation [Rev. eff. 3/1/16]

For child(ren) in out-of-home placement, the Family Services Plan documents:

- A. That the child meets all of the out-of-home placement criteria listed in Section 7.304.3.
- B. That when the child is part of a sibling group and the sibling group is being placed out of the home, if the county department locates an appropriate, capable, willing, and available joint placement for all of the children in the sibling group, it shall be presumed that placement of the entire sibling group in the joint placement is in the best interests of the children. Such presumption may be rebutted by the county by a preponderance of the evidence that placement of the entire sibling group in the joint placement is not in the best interests of a child or of the children. At the dispositional hearing, if a child is part of a sibling group and was not placed with his/her siblings, documentation shall be submitted to the court about whether it continues to be in the best interest of the child(ren) to be placed separately.
- C. The problems to be resolved in order to facilitate reunification of the child and family, and to safely maintain the child in the home.
- D. A description of the type of facility in which the child is placed, the reason(s) the placement is appropriate, and safe for the child. For children placed a substantial distance from the home of the parent(s) or in out-of-state placement, the county shall document how the placement meets the best interests of the child (see Section 7.304.54, J).
- E. A description of how the home is in reasonable proximity to the home of the parents or relatives and to the school the child has attended, including requirements regarding planning for educational stability as outlined in Section 7.301.241.
- F. That the placement is the least restrictive, safe, and most appropriate setting available consistent with the best interests and specific needs of the child. This includes documentation of initial and on-going efforts to place the child with kin.

If the child is moved to a more restrictive placement after the initial placement, the Family Services Plan documents how the more restrictive placement meets the child's needs.

- G. Health and educational information shall be documented in the State Department's automated system and updated at the time of each case review, including addresses and other contact information about the child's current:
 - 1. Education providers, including school, school district, and BOCES contacts who assist in the coordination of enrollment and services, and the child's academic progress.
 - 2. Health care providers and the status of health care information.
- H. Specific plans for how the county will carry out any court determinations or orders concerning the child.
- I. A description of the services and resources needed by the foster parents or kinship providers to meet the needs of the child and how those services and resources will be provided.
- J. A description of the services provided to reunite the family, including the plan for visitation, or to accomplish another permanency goal. The visitation plan shall specify the frequency, type of contact, and the person(s) who will make the visit. At a minimum the visitation plan shall provide the methods to meet the following:
 - 1. The growth and development of the child;
 - 2. The child's adjustment to placement;
 - 3. The ability of the provider to meet the child's needs;
 - 4. The appropriateness of the parent and child visitation, including assessment of risk;
 - 5. The child's contact with parents, siblings, and other family members; and,
 - 6. Visitation between the child and his/her family shall increase in frequency and duration as the goal of reuniting the family is approached.
- K. For youth under the age of fourteen (14), a description of services and a plan for accomplishing tasks to prepare youth to be age appropriately self-sufficient, when independent living services are provided.
- L. For youth age fourteen (14) and older, a description of services and a plan for accomplishing tasks to assist the youth in preparation for self sufficiency and independent living as early in placement as possible but no later than sixty (60) calendar days after the youth's fourteenth (14th) birthday.
- M. Reasonable efforts have been made to maintain the child in the home, or prevent or eliminate the need for removal of the child from the home, or make it possible for the child to return to the home; or when applicable, documentation of the circumstances that exist in which reasonable efforts to prevent removal or reunite the child and the family are not required (see Section 7.304.53, B, 3).
- N. The specified permanency goal for the child shall be based on the individual needs and best interests of the child. Permanency goals shall include one of the following:
 - Remain home;

- Return home;
- Permanent placement with a relative through adoption;
- Permanent placement with a relative through legal guardianship or permanent custody;
- Adoption (non-relative);
- Legal guardianship/permanent custody (non-relative);
- Return home through reinstatement of parental rights;
- Other planned permanent living arrangement through emancipation;
- other planned permanent living arrangement through relative long term foster care;
- other planned permanent living arrangement through non-relative long term foster care.

Permanency goals shall include the projected date (month, day, and year) by which the goal is to be accomplished for each child receiving services.

- 1. The initial permanency goal for the child is to return home with the following exceptions:
 - a. Children whose parents are both deceased or have both voluntarily relinquished custody;
 - b. Children whose parents cannot be located after family search and engagement activities, which shall begin no later than three working days following placement and shall not exceed three months:
 - c. Children whose parents have been guilty of repeated and/or severe abuse or neglect of the child or the child's siblings such that termination of parental rights of both parents is appropriate; or,
 - d. Children for whom it appears, after investigation, that a safe return home will not be possible even with the provision of reasonable efforts.
- 2. After twelve months, the child's caseworker and supervisor shall include written justification on the Family Services Plan for continuation of the goal of return home.
- 3. After eighteen months, the extraordinary circumstances which exist and the reasons which support the permanency goal of return home shall be documented in the Family Services Plan. Approval of the return home permanency goal by the caseworker, supervisor and county administrative review is documented in the case record.
- 4. In concurrent planning cases the alternate permanency goal shall be documented.
- 5. The permanency goal of other planned permanent living arrangement through emancipation shall only be used for youth ages sixteen to twenty-one.
- 6. For a child who has been in foster care under the responsibility of the state for fifteen (15) of the last twenty-two (22) months, the county shall either file a motion for termination of parental rights no later than the end of the fifteenth (15th) month or document and submit to the court at the next review the compelling reason why it is in the child's best interest not to terminate parental rights.

- O. The steps the agency is taking to find an adoptive or other permanent living arrangement for a child for whom the permanency plan is adoption or placement in another permanent home.
- P. The permanency goal for the child would be to remain home barring case circumstances that would indicate the need for an alternative permanency goal when a teen mother and her child are placed together in the same foster home and if a case is opened on the child. The county must see the child when visiting the teen mother in the foster home.
- Q. Requirements for use of Other Planned Permanent Living Arrangement goals as follows:
 - 1. The county department may consider Other Planned Permanent Living Arrangement (OPPLA) as a permanency goal:
 - For youth who are sixteen (16) years of age or over and are demonstrating exceptional circumstances that prevent the youth from returning home, adoption, legal guardianship or permanent custody.
 - 2. The goal shall be reviewed through the use of a family engagement meeting or equivalent team that reviews permanency needs. All of the following shall be submitted to and considered by the review team, and the recommendation shall be submitted to the court.
 - a. Documentation pertaining to the completion of an intensive and ongoing examination of kin and permanent connections. This process shall also address:
 - 1) A comprehensive assessment of the youth's strengths and needs. In addition to updating the assessment of the youth's strengths and needs, the updated assessment or staffing shall address the youth's capacity to live within a family setting.
 - 2) This review team shall also consider the youth's desired permanency outcome.
 - b. A detailed description of efforts made to achieve permanency through the other goals and identification of the barriers to achieve them.
 - c. A detailed description of how OPPLA is in the best interest of the youth.
 - 3. The following is to be documented and made available to the court at each court review.
 - a. Documentation of the barriers to permanency to date and compelling reasons why the other permanency goals are not attainable.
 - b. Documentation of the youth's desired permanency outcome including giving the youth an opportunity to attend each hearing to voice his/her desired goal.
 - c. Documentation of intensive, ongoing, and as of the date of the hearing, unsuccessful efforts to return the youth home or secure a placement for the youth with a fit and willing relative (including adult siblings), a legal guardian, or an adoptive parent, including thorough efforts that utilize technology (including social media) to find biological family members for the youth.
 - d. Documentation of the steps taken to ensure that youth are being supported in engaging in age or developmentally appropriate activities and social events including:

- 1) The youth's foster family home or other placement is following the reasonable and prudent parent standard: and.
- 2) The youth has regular, ongoing opportunities to engage in age or developmentally appropriate activities (including consulting with the youth in an age-appropriate manner about the opportunities of the youth to participate in the activities).
- 4. Documentation which includes the review team's reasons for approving Other Planned Permanent Living Arrangement (OPPLA) shall also be entered in the Family Service Plan as directed by the Division of Child Welfare.
- 5. The use of this goal shall be reviewed by a family engagement or equivalent review team at a minimum of every six (6) months. The county shall request that the court review the case every twelve (12) months to determine if the youth is demonstrating exceptional circumstances that prevent the youth from returning home, adoption, legal guardianship or permanent custody.
- 6. If this goal is not achieved through relative care, a family-like network of significant people shall be developed to provide the youth with a sense of belonging and with support expected to endure over a lifetime.

R. Reinstatement of Parental Rights

- 1. The county department of human or social services may explore the use of reinstatement of parental rights as a permanency option for:
 - a. Youth twelve (12) years of age and older, or child(ren) younger than twelve (12) years of age if they are part of a sibling group where at least one of the child(ren) or youth is twelve or older and is pursuing reinstatement of parental rights; and.
 - b. Child(ren) younger than twelve (12), if they are part of a sibling group where at least one of the child(ren) or youth is twelve or older, and is pursuing reinstatement of parental rights; and,
 - c. Child(ren) or youth who currently do not have a legal parent; and,
 - d. Child(ren) or youth who currently are not in an adoptive placement and not likely to be adopted within a reasonable period of time; and.
 - e Child(ren) or youth who had all other permanency options exhausted; and,
 - f. Cases when the termination of parental rights was ordered at least three-years prior or when it is determined by the court to be in the best interest of the child or youth when termination occurred less than three years prior to the date of the petition for reinstatement is being filed with the court; and,
 - g. Child(ren) or youth and former parent(s) that consent to parental rights being reinstated; and,
 - h. Child(ren) or youth where it is in their best interest, including the financial best interest, to have parental rights reinstated; and,

- i. Former parent(s) who have remedied the issues that led to the termination and those issues did not involve founded allegations of sexual abuse or an incident of egregious abuse or neglect against a child, a near fatality, or a suspicious fatality.
- j. The child is in the legal custody of a county department.
- 2. A county department of human or social services that identifies reinstatement as a permanency option shall complete an assessment of the former parent(s). Completion of the assessment and the results of the assessment will be documented in the statewide case management system. The assessment shall include all of the following:
 - a. Completing the Colorado family risk assessment tool, which must include a visit and inspection of the former parent's home;
 - b. Reviewing the reasons for the termination of parental rights and determining if the concerns identified have been remedied and do not currently exist or present a safety concern;
 - c. Conducting the following background checks on the former parent(s) and any other adults eighteen (18) years of age or older in their home and share the results with all parties to the case:
 - 1) Child abuse/and/or neglect records check in every state where any adult residing in the home has lived in the five years preceding the filing of the petition for reinstatement;
 - 2) Fingerprint-based criminal history checks from the Colorado Bureau of Investigation (CBI), or other state background check if the parent lives in another state, and the Federal Bureau of Investigation (FBI);
 - 3) Review the state Judicial Department's case management system and include in the case record; and,
 - 4) Review the CBI sex offender registry and the national sex offender public website operated by the United States Department of Justice for:
 - a) Known names and addresses of each adult residing in the home; and,
 - b) Address only of the home.
- 3. A safety assessment shall be completed.
- 4. Upon the decision to pursue reinstatement of parental rights; only the county department, guardian ad litem, or a youth sixteen (16) years of age or older may file the petition for reinstatement.
 - a. The petition for reinstatement of parental rights should be filed in the county who has custody of the child(ren) or youth through the dependency and neglect court case.
 - b. The petition shall be filed in the dependency and neglect court case where the termination of parental rights occurred for the former parent(s) or in the event that the current open dependency and neglect case is a termination of the adoptive

- parent's rights, then the petition shall be filed in that court case, as it grants custody of the child(ren) or youth to the county.
- c. If the county is contacted by a former parent inquiring about reinstatement, the county must notify the guardian ad litem (gal) within thirty (30) calendar days after the contact and provide them with the name and address of the former parent(s).
- d. Once the court sets an initial hearing, the county shall develop and report to the court the following:
 - 1) Whether the former parent(s) has remedied the conditions that led to the termination;
 - 2) Based on the assessment of the former parent, including the outcome of the Colorado family risk assessment tool, the transition plan shall include supports or treatment needed for the child(ren) [or] youth and former parent(s) to help make the reinstatement a success;
 - 3) Whether the former parent(s) can provide a safe and stable home for the child(ren) or youth;
 - 4) A visitation or temporary placement plan with the former parent(s) for up to a six month trial period where custody remains with the department; this plan will be approved or modified at this initial hearing.
 - a) Updates about the visits, transition plan, and supports shall be provided at each review hearing and no later than thirty (30) calendar days prior to the expiration of the trial home period.
 - b) At any point the placement is deemed no longer safe or in the best interest of the child(ren) or youth, removal shall be in accordance with procedures outlined in Sections 19-3-401 and 19-3-403, C.R.S.
 - 5) Whether the child(ren) or youth will lose or gain any benefits or services (Medicaid, Chafee, etc.) as a result of the reinstatement being granted.
- 5. If the court grants the order, the county shall select reinstatement of parental rights as the closure reason, in the state automated case management system.
- 6. If the court denies the order the county department shall:
 - a. Arrange for immediate placement of the child(ren) or youth, if the child(ren) or youth is still in the former parent's home;
 - b. Set a permanency hearing to determine a new permanency goal and plan for the child(ren) or youth.

[Instructions: replace the following sections.]

7.304.54 Court Procedures Related to Permanency Planning [Rev. eff. 3/1/16]

- A. The county department must develop a permanent plan for any child who is in out-of-home placement and is the subject of any court action, including Dependency and Neglect, Delinquency, or a Petition to Review the Need for Placement and a concurrent plan for cases filed under Section 19-3-102(2), C.R.S., regarding habitual abuse. The purpose of the plan is to establish treatment needs related to the stated goal for the child and to decide a method to provide a safe, stable, permanent environment for the child as guickly as possible.
- B. The county department shall submit this plan at the permanency court hearing. That hearing must be held before twelve (12) months have elapsed from the date of the child's original out-of-home placement, and shall be held as soon as possible following the dispositional hearing. Following the initial permanency hearing, subsequent permanency hearings must be held every twelve months thereafter while the child remains in out-of-home care. These hearings shall be combined with a periodic review when possible.
- C. The county department shall provide the court with documentation of the efforts made by the department to finalize the permanency plan for the child. The county department shall request the court to make a finding (if the evidence so warrants) that the department made reasonable efforts to finalize the permanency plan for the child.
- D. Paper reviews, ex parte hearings, agreed orders or other actions or hearings which are not open to the participation of the parents of the child (if appropriate age) and foster parents or preadoptive parents are not permanency hearings.
- E. When the court determines that reasonable efforts to return the child home are not required, the county shall request that the permanency hearing be held no later than thirty (30) calendar days after such court determination, unless the requirements of the permanency hearing are fulfilled at the hearing in which such a determination is made.
- F. The county department shall ensure and document that a request is made to the court for such a hearing in sufficient time to assure that the hearing is held within the twelve (12) month time frame. Permanency hearings shall be combined with a review hearing when possible.
- G. The county department shall include, in the permanency plan, recommendations to the court on either:
 - 1. Returning the child to his/her parent or guardian within the next six months; or,
 - 2. Permanent placement with a relative through adoption; or,
 - 3. Permanent placement with a relative through guardianship or permanent custody; or,
 - 4. Adoption (non-relative); or,
 - 5. Legal guardianship/permanent custody (no-relative); or,
 - 6. Return home through reinstatement of parental rights; or,
 - 7. Other planned permanent living arrangement through emancipation; or,
 - 8. Other planned permanent living arrangement through relative long term foster care; or,

- 9. Other planned permanent living arrangement through non-relative long term foster care.
- H. For permanency goals 8 or 9, the county department shall ensure that the plan contains the name or other identifier, such as the system provider number, if the name of the provider must be kept confidential, of the specific placement and the date that placement shall end.
- I. For permanency goals 7, 8, and 9, the following requirements shall apply to the county department of human or social services for purposes of approving the case plan and the case review procedure for youth:
 - 1. At each permanency hearing held with respect to the youth, provide documentation of the intensive, ongoing, and, as of the date of the hearing, unsuccessful efforts made to address the following:
 - a. Return the youth home;
 - b. Secure a placement for the youth with a fit and willing relative (including adult siblings), a legal guardian, or an adoptive parent; and,
 - c. Include efforts that utilize search technology (including social media) to find biological family members for the youth.
 - 2. Provide compelling reasons why it continues not to be in the best interests of the youth to return home, be placed for adoption, with a legal guardian, or with a fit and willing relative.
- J. The county department shall request that the court order contain specific findings regarding the above goals.
- K. The county department shall assure that the permanency hearings determine whether an out-of-state placement continues to be appropriate and is in the best interest of the child.
- L. The county department shall assure that the permanency hearings determine whether the permanency plan includes independent living services for a child sixteen years of age or older.
- M. Permanency hearings are required to be held if a termination is under appeal, for children placed in a permanent foster home with a specific caregiver, and for children who are free for adoption and are placed in adoptive homes pending the finalization of the adoption.
- N. The county department shall file for termination of parental rights no later than the end of the 15th month of placement for any child who has been in foster care under the responsibility of the state for 15 of the last 22 months unless there is a compelling reason submitted to the court identifying why it is in the child's best interest to not terminate parental rights.
- O. The county department shall file for termination of parental rights no later than sixty (60) calendar days after the court determines that the child is an abandoned infant, unless there is a compelling reason submitted to the court identifying why it is in the child's best interest to not terminate parental rights.
- P. The county department shall file for termination of parental rights no later than sixty (60) calendar days after a judicial determination is made that reasonable efforts to reunify the child with the parent are not required, unless there is a compelling reason submitted to the court identifying why it is in the child's best interest to not terminate parental rights.

DEPARTMENT OF REGULATORY AGENCIES DIVISION OF REAL ESTATE BOARD OF REAL ESTATE APPRAISERS 4 CCR 725-2

EMERGENCY RULE

CHAPTER 11: STANDARDS OF PROFESSIONAL APPRAISAL PRACTICE

Pursuant to and in compliance with Title 12, Article 61 and Title 24, Article 4, C.R.S. as amended, notice of emergency rulemaking is hereby given, including notice to the Attorney General of the State of Colorado and to all persons who have requested to be advised of the intention of the Colorado Board of Real Estate Appraisers ("Board") to promulgate rules, or to amend, repeal or repeal and reenact the present rules of the Board.

Section 1.	Statement of Basis and Authority
Section 2	Scone and Durnose

Section 2. Scope and Purpose

Section 3. Applicability

Section 4. Chapter 11 - Standards of professional appraisal practice

Section 5. Effective Date

Section 1. Statement of Basis and Authority

The statutory basis for the rules titled <u>Rules of the Board of Real Estate Appraisers</u> is Part 7 of Title 12, Article 61, Colorado Revised Statutes, as amended.

Section 2. Scope and Purpose

The specific purpose of this rule is to amend the existing rule with respect to the generally accepted standards of professional appraisal practice.

The Uniform Standards of Professional Appraisal Practice ("USPAP") sets forth ethical and performance standards for the appraisal profession. Compliance with USPAP is required for appraisals in connection with federally related real estate transactions. 12 U.S.C. § 3339(1). USPAP is updated every two years and the current 2014-2015 edition is set to expire on December 31, 2015. The Appraisal Standards Board of The Appraisal Foundation has adopted revisions to USPAP for the 2016-2017 edition. The changes are effective January 1, 2016.

The Board of Real Estate Appraisers finds that immediate adoption of this emergency rule is imperatively necessary to comply with state and federal law, and that compliance with the rulemaking requirements of § 24-4-103, C.R.S., applicable to non-emergency rules, would be contrary to the public interest. The Board has the duty to promulgate rules as required to comply with the federal Financial Institutions Reform, Recovery, and Enforcement Act of 1989, as amended ("FIRREA"). § 12-61-704(1)(a)(I), C.R.S. Under FIRREA, states must recognize and enforce the most current version of USPAP. 12 U.S.C. §§ 3331 and 3347.

It is imperatively necessary that the Board adopts, and incorporates the revised version of USPAP; which includes the definitions, preamble, rules, and standards (including standards rules) on an emergency basis.

Section 3. Applicability

The emergency rule governs real estate appraisers who are subject to the requirements of Part 7 of Title 12. Article 61 of the Colorado Revised Statutes.

Proposed New, Amended and Repealed Rules

[Deleted material shown struck through, new material shown ALL CAPS. Rules, or portions of rules, which are unaffected are reproduced. Readers are advised to obtain a copy of the complete rules of the Board at www.dora.colorado.gov/dre.

CHAPTER 11: STANDARDS OF PROFESSIONAL APPRAISAL PRACTICE

11.1 Pursuant to Section 12-61-713(1)(g), C.R.S. (as amended), the Board adopts, and incorporates by reference in compliance with Section 24-4-103(12.5), C.R.S., as the generally accepted standards of professional appraisal practice the definitions, preamble, rules, standards, and standards rules of the Uniform Standards of Professional Appraisal Practice as promulgated by the Appraisal Standards Board of the Appraisal Foundation on January 30, 1989 and amended through February 6, 2015 and known as the 2016-2017 edition. Amendments to the Uniform Standards of Professional Appraisal Practice subsequent to February 6, 2015 are not included in this Rule. A certified copy of the Uniform Standards of Professional Appraisal Practice is on file and available for public inspection at the offices of the Board of Real Estate Appraisers at 1560 Broadway, Suite 925, Denver, Colorado. Copies of the Uniform Standards of Professional Appraisal Practice adopted under this rule may be examined at any state publications depository library. The 2016-2017 edition of the Uniform Standards of Professional Appraisal Practice may be examined at the Internet website of The Appraisal Foundation at www.appraisalfoundation.org, and copies may be ordered through that mechanism. The Appraisal Foundation may also be contacted at 1155 15th Street, NW, Suite 1111, Washington, DC 20005, or by telephone at (202) 347-7722 or by telefax at (202) 347-7727. The 2014-2015 edition of the Uniform Standards of Professional Appraisal Practice, incorporating the amendments made through February 1, 2013 shall remain in effect through January 6, 2016. Beginning January 7, 2016, the 2016-2017 edition of the Uniform Standards of Professional Appraisal Practice shall be in effect.

[NOT FOR PUBLICATION]

Section 5. Effective Date

This emergency rule is effective January 7, 2016.

DEPARTMENT OF REGULATORY AGENCIES DIVISION OF REAL ESTATE BOARD OF REAL ESTATE APPRAISERS 4 CCR 725-2

EMERGENCY RULE

CHAPTER 11: STANDARDS OF PROFESSIONAL APPRAISAL PRACTICE

Pursuant to and in compliance with Title 12, Article 61 and Title 24, Article 4, C.R.S. as amended, notice of emergency rulemaking is hereby given, including notice to the Attorney General of the State of Colorado and to all persons who have requested to be advised of the intention of the Colorado Board of Real Estate Appraisers ("Board") to promulgate rules, or to amend, repeal or repeal and reenact the present rules of the Board.

Section 1. Statement of Basis and Authority

Section 2. Scope and Purpose

Section 3. Applicability

Section 4. Chapter 11 - Standards of professional appraisal practice

Section 5. Effective Date

Section 1. Statement of Basis and Authority

The statutory basis for the rules titled <u>Rules of the Board of Real Estate Appraisers</u> is Part 7 of Title 12, Article 61, Colorado Revised Statutes, as amended.

Section 2. Scope and Purpose

The specific purpose of this rule is to amend the existing rule with respect to the generally accepted standards of professional appraisal practice.

The Uniform Standards of Professional Appraisal Practice ("USPAP") sets forth ethical and performance standards for the appraisal profession. Compliance with USPAP is required for appraisals in connection with federally related real estate transactions. 12 U.S.C. § 3339(1). USPAP is updated every two years and the current 2014-2015 edition is set to expire on December 31, 2015. The Appraisal Standards Board of The Appraisal Foundation has adopted revisions to USPAP for the 2016-2017 edition. The changes are effective January 1, 2016.

The Board of Real Estate Appraisers finds that immediate adoption of this emergency rule is imperatively necessary to comply with state and federal law, and that compliance with the rulemaking requirements of § 24-4-103, C.R.S., applicable to non-emergency rules, would be contrary to the public interest. The Board has the duty to promulgate rules as required to comply with the federal Financial Institutions Reform, Recovery, and Enforcement Act of 1989, as amended ("FIRREA"). § 12-61-704(1)(a)(I), C.R.S. Under FIRREA, states must recognize and enforce the most current version of USPAP. 12 U.S.C. §§ 3331 and 3347.

It is imperatively necessary that the Board adopts, and incorporates the revised version of USPAP; which includes the definitions, preamble, rules, and standards (including standards rules) on an emergency basis.

Section 3. Applicability

The emergency rule governs real estate appraisers who are subject to the requirements of Part 7 of Title 12, Article 61 of the Colorado Revised Statutes.

Proposed New, Amended and Repealed Rules

[Deleted material shown struck through, new material shown ALL CAPS. Rules, or portions of rules, which are unaffected are reproduced. Readers are advised to obtain a copy of the complete rules of the Board at www.dora.colorado.gov/dre.

CHAPTER 11: STANDARDS OF PROFESSIONAL APPRAISAL PRACTICE

11.1 Pursuant to Section 12-61-713(1)(g), C.R.S. (as amended), the Board adopts, and incorporates by reference in compliance with Section 24-4-103(12.5), C.R.S., as the generally accepted standards of professional appraisal practice the definitions, preamble, rules, standards, and standards rules of the Uniform Standards of Professional Appraisal Practice as promulgated by the Appraisal Standards Board of the Appraisal Foundation on January 30, 1989 and amended through February 6, 2015 and known as the 2016-2017 edition. Amendments to the Uniform Standards of Professional Appraisal Practice subsequent to February 6, 2015 are not included in this Rule. A certified copy of the Uniform Standards of Professional Appraisal Practice is on file and available for public inspection at the offices of the Board of Real Estate Appraisers at 1560 Broadway, Suite 925, Denver, Colorado. Copies of the Uniform Standards of Professional Appraisal Practice adopted under this rule may be examined at any state publications depository library. The 2016-2017 edition of the Uniform Standards of Professional Appraisal Practice may be examined at the Internet website of The Appraisal Foundation at www.appraisalfoundation.org, and copies may be ordered through that mechanism. The Appraisal Foundation may also be contacted at 1155 15th Street, NW, Suite 1111, Washington, DC 20005, or by telephone at (202) 347-7722 or by telefax at (202) 347-7727. The 2014-2015 edition of the Uniform Standards of Professional Appraisal Practice, incorporating the amendments made through February 1, 2013 shall remain in effect through January 6, 2016. Beginning January 7, 2016, the 2016-2017 edition of the Uniform Standards of Professional Appraisal Practice shall be in effect.

Section 5. Effective Date

This emergency rule is effective January 7, 2016.

Notice regarding Revenue Regulation 39-22-303.12(c).

Taxpayers should not rely on Revenue Regulation 39-22-303.12(c) until further notice.

Discussion.

Section 303-22-303(12)(c), C.R.S, provides that only C corporations that have more than 20% of their property and payroll located inside the United States may be included in a corporate taxpayer's combined return. In 1994 the Department adopted Regulation 39-22-303.12(c) to address the treatment of Foreign Sales Corporations ("FSCs") under section 303-22-303(12)(c), C.R.S. FSCs may receive a reduction in U.S. federal income tax related to certain foreign exports, but do not necessarily have property or payroll for Colorado combined reporting purposes. Regulation 303.12(c) provides that corporations that have no property or payroll cannot have 20% or more of property or payroll located in the United States and therefore cannot be included in a combined report.

This rule was intended to address FSCs in particular. Nevertheless, some taxpayers have interpreted Regulation 303.12(c) to apply to domestic holding companies with no foreign operations and have argued that they can exclude any domestic C corporation from their combined returns if it has no property or payroll, even if it does not do business in a foreign country. The Department disagrees with this interpretation. This issue is currently being addressed in the Colorado courts.

The Department will wait for a final ruling from the courts on the application of section 39-22-303(12)(c), C.R.S., and Regulation 303.12(c) before considering any further action on Regulation 303.12(c). Pending that determination, taxpayers should not rely on this regulation except as it applies to an FSC.

Notice of Mandatory Rule Review Written Comment Period

Rules Concerning Campaign and Political Finance [8 CCR 1505-6] February 9, 2016

What is this about?

Secretary Williams is reviewing the Rules Concerning Campaign and Political Finance in accordance with section 24-4-103.3, C.R.S. We invite you to participate in this effort by submitting written comments. The most helpful comments will reference issues within the scope of the rule review criteria outlined below, cite specific sections of the rules, and explain the reason for a recommended change.

For the rule review, the Secretary of State will consider:

- 1. Whether the rule is necessary;
- 2. Whether the rule overlaps or duplicates other rules of the agency or with other federal, state, or local government rules;
- 3. Whether the rule is written in plain language and is easy to understand;
- 4. Whether the rule has achieved the desired intent and whether more or less regulation is necessary;
- 5. Whether the rule can be amended to give more flexibility, reduce regulatory burdens, or reduce unnecessary paperwork or steps while maintaining its benefits;
- 6. Whether the rule is implemented in an efficient and effective manner, including the requirements for the issuance of permits and licenses;
- 7. Whether a cost-benefit analysis was performed by the applicable rule-making agency or official in the principal department pursuant to section 24-4-103 (2.5), C.R.S.; and
- 8. Whether the rule is adequate for the protection of the safety, health, and welfare of the state or its residents

A current copy of the rules is available online at:

http://www.sos.state.co.us/CCR/GenerateRulePdf.do?ruleVersionId=6513&fileName=8%20CC R%201505-6.

How do I submit my comments and what is the deadline?

You may email your comments to <u>SOS.Rulemaking@sos.state.co.us</u>. To ensure consideration of your comments, please submit your comments by 5:00 p.m. on March 9, 2016.

Will my comments appear online?

Yes. To promote transparency and help generate discussion, our office will post a copy of your comments on the Secretary of State's website. We will also incorporate your comments into a report of our review findings that will appear in the Secretary of State's annual departmental regulatory agenda.

To view the comments that we receive, please visit: http://www.sos.state.co.us/pubs/rule making/ruleReviews.html.
