

Colorado Register

42 CR 16

Volume 42 , No. 16

August 25, 2019

Introduction

The *Colorado Register* is published pursuant to C.R.S. 24-4-103(11) and is the sole official publication for state agency notices of rule-making, proposed rules, attorney general's opinions relating to such rules, and adopted rules. The register may also include other public notices including annual departmental regulatory agendas submitted by principal departments to the secretary of state.

"Rule" means the whole or any part of every agency statement of general applicability and future effect implementing, interpreting, or declaring law or policy or setting forth the procedure or practice requirements of any agency. "Rule" includes "regulation". C.R.S. 24-4-102(15). Adopted rules are effective twenty days after the publication date of this issue unless otherwise specified.

The *Colorado Register* is published by the office of the Colorado Secretary of State twice monthly on the tenth and the twenty-fifth. Notices of rule-making and adopted rules that are filed from the first through the fifteenth are published on the twenty-fifth of the same month, and those that are filed from the sixteenth through the last day of the month are published on the tenth of the following month. All filings are submitted through the secretary of state's electronic filing system.

For questions regarding the content and application of a particular rule, please contact the state agency responsible for promulgating the rule. For questions about this publication, please contact the Administrative Rules Program at rules@sos.state.co.us.

Board of Chiropractic Examiners

COLORADO STATE BOARD OF CHIROPRACTIC EXAMINERS RULES AND REGULATIONS

3 CCR 707-1

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

1. Rule 6 Electrotherapy Authority

- A. Electrotherapy/Physiotherapy certification is required prior to any licensee practicing electrotherapy/physiotherapy. Physiotherapy as used in these rules includes the theory, principles, and use of standard recognized physiotherapy equipment and procedures. ~~is defined as content outlined in the National Board of Chiropractic Examiner's Physiotherapy Test Plan and coursework taught at schools accredited by the the Council on Chiropractic Education.~~

...

1. Rule 7 Scope of Practice

- A. Practices that are not within the scope of chiropractic practice and invoke the duty to refer provision in sSection 12-21533-1157(1)(aabb), C.R.S., include, but are not limited to:
1. Treatment of the disease cancer. This does not preclude screening and diagnostic procedures for the prevention and early detection of cancer or the chiropractic treatment of other concomitant conditions that the patient may have. In addition, a qualified chiropractor may collaboratively treat cancer in conjunction with, but not replacing, drugs, surgery, or chemotherapy.
 2. Obstetrics.
 3. Surgery.
 4. Administration of anesthetics, with the exception of topical or over-the-counter anesthetics.
 5. Prescription of drugs not referenced in Rule 1.7-C(C).
 6. Hypnosis unless used as a procedure to augment the treatment of the neuromusculoskeletal system and unless the practitioner presents evidence to the Board of having obtained education in hypnosis from an accredited college or Board approved program.
- B. A chiropractor must have the knowledge, skill, ability, and documented competency to perform an act that is within the chiropractic scope of practice. Procedures with specific clinical, didactic requirements and qualifications include, but are not limited to:
1. Paraspinal Surface Electromyography
 - a. Ten ~~(10)~~ hours of initial training with demonstrated competency.

-
- b. Procedures may be delegated to a qualified technician and must be supervised and interpreted by an on-site qualified and licensed doctor of chiropractic.
 - c. Procedures must be performed in a manner consistent with generally accepted parameters, including any relevant standards of the Center for Communicable Diseases and meet safe and professional standards.
 - 2. Surface Electromyography excluding paraspinal, Nerve Conduction Velocity (NCV) and Needle Electromyography
 - a. One hundred and twenty ~~(120)~~ hours of initial clinical and didactic training with demonstrated competency in electromyography (paraspinal surface electromyography excluded).
 - b. Procedures may not be delegated to a technician and must be directly performed by a qualified and licensed doctor of chiropractic.
 - c. Procedures must be performed in a manner consistent with generally accepted parameters, including clean needle techniques, and standards of the Center for Communicable Diseases and meet safe and professional standards.
 - 3. Electrocardiography (EKG/ECG)
 - a. One hundred and twenty ~~(120)~~ hours of initial and related clinical with didactic training and demonstrated competency in cardiac medicine.
 - b. Procedures may not be delegated to a technician and must be directly performed by a qualified and licensed doctor of chiropractic.
 - c. Procedures must be performed in a manner consistent with generally accepted parameters, including any relevant standards of the Center for Communicable Diseases and meet safe and professional standards.
 - 4. Manipulation Under Anesthesia (MUA)
 - a. Thirty-six ~~(36)~~ hours of didactic and clinical training, successful completion of a competency examination, and nationally recognized certification.
 - b. Professional liability insurance coverage to specifically include MUA.
 - c. Procedures must be performed in a manner consistent with generally accepted parameters and standards of practice.
 - d. Procedures shall be performed at either an ambulatory surgical center or outpatient hospital facility.
 - e. The role of the chiropractor shall be limited to the scope of chiropractic practice as defined in sSection 12-~~21533~~-10~~32~~(~~41~~), C.R.S.
 - 5. Intramuscular stimulation/Dry Needling.
 - a. Dry needling is a physical intervention that uses a filiform needle to stimulate trigger points, diagnose and treat neuromuscular pain and functional movement deficits; requires an examination and diagnosis, and treats specific anatomic
-

entities selected according to physical signs. Dry needling does not include the stimulation of auricular or distal points and cannot be presented as acupuncture.

- b. Dry needling as defined pursuant to this rule is within the scope of practice of chiropractic.
- c. A chiropractor must have an electrotherapy certification, knowledge, skill, ability and documented competency to perform an act that is within the chiropractor's scope of practice.
- d. To be deemed competent to perform dry needling, a chiropractor holding electrotherapy certification and acupuncture certification must meet the following requirements:

- (1)i. Document successful completion of a dry needling course of study including a minimum of twenty-four ~~(24)~~ hours of face-to-face IMS/dry needling course study; online study is not considered appropriate training.

- (2)ii. Practiced acupuncture as a licensed chiropractor for at least two ~~(2)~~ years prior to using the dry needling technique.

- e. To be deemed competent to perform dry needling a chiropractor with electrotherapy certification but without acupuncture certification must meet the following requirements:

- (1)i. Document successful completion of a dry needling course of study including a minimum of forty-six ~~(46)~~ hours of face-to-face IMS/dry needling course study; online study is not considered appropriate training.

- (2)ii. Practiced as a licensed chiropractor for at least two ~~(2)~~ years prior to using the dry needling technique.

- f. A provider of a dry needling course of study must meet the educational and clinical requirements in dry needling of a body recognized by the US Department of Education or similar agency of a foreign country and demonstrate a minimum of two ~~(2)~~ years of dry needling practice techniques. The provider is not required to be a chiropractor.
- g. A chiropractor performing dry needling must have written, informed consent for each patient where this technique is used. The patient must sign and be given a copy of the informed consent form. The form must, clearly state the risks and benefits of dry needling.
- h. Any dry needling performed must be clearly documented in the procedure notes, which must indicate how the patient tolerated the technique and the outcome after the procedure.
- i. Dry needling shall not be delegated and must be directly performed by a qualified, licensed chiropractor with electrotherapy certification who meets the standards in this rule.

- C. Nutritional Remedial Measures as referenced in ~~s~~Section 12-~~21533-1032~~(41), C.R.S., means that a doctor of chiropractic may administer, prescribe, recommend, compound, sell and distribute

homeopathic and botanical medicines, vitamins, minerals, phytonutrients, antioxidants, enzymes, glandular extracts, non-prescription drugs, durable and non-durable medical goods and devices.

D. Physical Remedial Measures as referenced in [sSection 12-21533-103\(4\)2](#), C.R.S., includes but is not limited to:

1. Tests (physical, functional, mechanical, computerized).
2. Exercise therapeutics (instruction, passive, active, resistive, cardiovascular).
3. Work hardening.
4. Gait/locomotion training.
5. Manual therapies (massage, mobilization, manipulation).
6. Traction.
7. Postural drainage.
8. Biofeedback (when done to facilitate chiropractic care).
9. Functional activities with or without assistive devices.
10. Postural re-education.
11. Physiotherapy ~~(as defined above)~~.

E. Patient assessment may include, but is not limited to the following:

1. Physical examination.
2. Neurologic testing.
3. Orthopedic testing (provocative/ functional testing).
4. Chiropractic testing.
5. Range of motion examination.
6. Strength testing (manual, mechanical, computerized).
7. Postural examination.
8. Gait/movement analysis.
9. Activities of daily living.
10. Psychometric questionnaires.
11. Nocioception.
12. Cardiac, pulmonary, and vascular examination.
13. Fitness examination.

-
14. Work site assessment.
 15. Home assessment.
 16. Photosensitivity testing.
 17. Impairment or disability ratings.
 18. Functional capacity evaluation.
 19. Radiography and other diagnostic imaging

...

1.Rule 11 Use of Credentials

A. Only those titles authorized by statute may be used.

~~B. — Use of the title 'chiropractic physician' is permitted.~~

~~B.~~ Post-graduate degrees received from an institution accredited by the Council of Chiropractic Education or diplomate status may be used in conjunction with those titles authorized by statute.

DEPARTMENT OF REGULATORY AGENCIES

State Board of Pharmacy

3 CCR 719-1

STATE BOARD OF PHARMACY RULES

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

1.00.24 Except as provided in sections 25.5-2.5-201 through 25.5-2.5-206, C.R.S., a
prescription drug outlet shall ensure that all prescription drugs and controlled substances are
procured from another entity or person registered by the Board. Any drug designated as
an Investigational New Drug from the Federal Food and Drug Administration is exempt
from this requirement provided the research requirements for the receipt of the product
are followed and it meets the requirements of section CRS 12-28042.5-13128(2), C.R.S.

2.01.50 Transfer of Prescription Orders Between Prescription Drug Outlets.

- a. A prescription label or a written copy of a prescription order from another pharmacy may be used for informational purposes only and shall not be considered to be a valid prescription order. A pharmacist, pharmacy intern, or pharmacy technician who receives such a label or prescription order copy shall either contact the prescribing practitioner for authorization to dispense the prescription, or, alternatively, shall comply with 2.01.52 through 2.01.59.
- b. A pharmacist, pharmacy intern, or pharmacy technician may orally transfer prescription order information for non-controlled substances for the purpose of dispensing a prescription ~~if the information is communicated by one pharmacist to another pharmacist or an intern, or by an intern under the direct supervision of a pharmacist to another pharmacist.~~
- c. A prescription drug outlet may transfer a prescription order electronically to another prescription drug outlet for the purpose of dispensing a prescription order.
 - (1) If the prescription order information is transmitted by facsimile, the transferring pharmacist, pharmacy intern, or pharmacy technician shall comply with rule 2.01.52.
 - (2) Prescription order information may be transmitted electronically between two compatible computer systems that are capable of complying with the requirements of rules 2.01.52 and 2.01.53 (1)-(10). In the case of electronic transfers, the transferring and receiving pharmacist, pharmacy intern, or pharmacy technician may be the same person.
 - (3) In the case of prescription drug outlets that access and share the same data storage device and that can electronically retrieve all necessary information, if the original prescription order information is not invalidated, each dispensing prescription drug outlet shall be capable of accessing a transaction record that indicates the following information: (a) date, (b) time, and (c) location from which the prescription was dispensed. If the prescription order is assigned a new

prescription number at the receiving pharmacy, the prescription information at the originating pharmacy shall be invalidated.

- d. The one-time transfer of original prescription information for a controlled substance listed in schedules III, IV, or V for the purpose of dispensing is permissible between pharmacies. However, pharmacies electronically sharing a real-time, on-line database may transfer up to the maximum refills permitted by law and the prescriber's authorization. If the prescription order is assigned a new prescription number at the receiving pharmacy, the prescription may be transferred on a one-time basis only.
- e. A pharmacist may authorize pharmacy technician [or pharmacy intern](#) to electronically transfer an order, for the purpose of redispensing said order, provided that the electronic transfer is between two compatible computer systems and no changes are made. The pharmacist shall be identified on the transfer record as required by 2.01.52 and 2.01.53.

2.01.52 _____ The transferring pharmacist, [pharmacy intern, or pharmacy technician](#) shall:

- a. Write the word "void" across the face of the original prescription order to make the order invalid;
- b. Record on the reverse side of the invalidated prescription order:
 - (1) His/her name, license [or certification](#) number, initials, or secure electronic identifier;
 - (2) The name, license number, initials, or secure electronic identifier of the receiving pharmacist or [pharmacy intern or pharmacy technician](#)~~intern~~;
 - (3) The name of the receiving prescription drug outlet;
 - (4) The address and telephone number of the receiving prescription drug outlet; and
 - (5) The date of the transfer.
 - (6) In the case of a controlled substance in schedule III through V, the Drug Enforcement Administration registration number of the receiving prescription drug outlet.
- c. A pharmacy utilizing a computer for storage and retrieval of information regarding prescription transactions shall be exempt from the requirements of paragraphs (a) and (b) of this rule if the computer is capable of invalidating the prescription order and retaining as part of the permanent record the information specified in paragraph (b) of this rule.

2.01.53 _____ The pharmacist, [pharmacy intern, or pharmacy technician](#) receiving the transferred
_____ prescription order information shall:

Reduce the transferred information to writing or print; write or print the word "transfer" on the face of the transferred prescription order; and provide all information required by law or rule to be on the prescription order, including:

- (1) The date of issue of the original prescription order;
- (2) The date of initial compounding and dispensing of the original prescription order;

- (3) The number of refills authorized and the original quantity prescribed or any limitations placed on the prescription;
- (4) The number of valid refills remaining;
- (5) The date of the last refill of the original prescription order;
- (6) The prescription order number from which the prescription order information was transferred;
- (7) The name, license [or certification](#) number, initials, or secure electronic identifier of the transferring pharmacist, [pharmacy intern, or pharmacy technician](#) ~~or intern~~;
- (8) The name of the transferring prescription drug outlet;
- (9) The address and telephone number of the transferring prescription drug outlet;
- (10) In the case of a controlled substance in schedules III through V, the Drug Enforcement Administration number of the transferring prescription drug outlet, and the practitioner's Drug Enforcement Administration number.

...

2.01.56 _____ The pharmacist, [pharmacy intern, or pharmacy technician](#) at the receiving prescription drug outlet at the time of the dispensing of the transferred prescription, shall inform the patient that the prescription order is now invalid at the prescription drug outlet from which it was transferred.

...

2.01.80 _____ When a prescription drug outlet discontinues business and the prescription order files are moved to another prescription drug outlet, those orders shall be considered void and shall not be refilled. However, if the receiving pharmacist, [pharmacy intern, or pharmacy technician](#) can establish that an authorized refill or authorized refills remain on any such order, such authorization may, at the sole discretion of the pharmacist, be used to establish a new order.

- a. If the record which reflects the authorized refill or refills is the original prescription order, the serial number of the original prescription order shall be recorded on the new order, and the serial number of the new prescription order shall be recorded on the original order.
- b. If the record which reflects the authorized refill or refills is electronic, the pharmacist, [pharmacy intern, or pharmacy technician](#) shall maintain in written or printed form a record which indicates both the serial number of the original prescription order and the serial number of the new prescription order. This record may be made part of the daily printout required by [Rule 11.04.20](#) if it is routinely recorded in such printout. The refill authorization(s) contained in the original electronic record must be invalidated to prevent further refilling.
- c. The files from the prescription drug outlet that has discontinued business may be transferred to another prescription drug outlet under the following conditions:

- (1) The computer or electronic database from the prescription drug outlet that discontinued business is located and will remain at the pharmacy to which it is transferred for at least two years.
- (2) The computer or electronic database must be capable of complying with [Rule 2.01.52\(c\)](#).

3.00.00 DISPENSING.

...

[3.00.23 Dispensing without an order.](#)

[a.](#) A pharmacist may dispense an emergency supply of a chronic maintenance drug, as defined in section 12-280-103(9.5)(a) and (b), C.R.S., to a patient without a current, valid order under the conditions set forth in section 12-280-125.5, C.R.S. When an emergency dispensing occurs, the dispensing pharmacist, or his or her designee, shall immediately notify the practitioner of record related to the emergency dispensing, in writing, detailing the:

- [\(1\) Name, address, and telephone number of dispensing pharmacy;](#)
- [\(2\) Name, strength, dosage form, directions, and quantity of drug dispensed;](#)
- [\(3\) Name of patient and corresponding patient's date of birth; and](#)
- [\(4\) Date of emergency dispensing.](#)

[b.](#) Records related to the dispensing of an emergency supply of a chronic maintenance drug shall be detailed and maintained in the same manner as all other dispensing transactions in compliance with all applicable provisions of Board Rules 2.00.00, 3.00.00, 11.00.00, 21.00.00, and 26.00.00.

...

3.00.30 Labeling.

[a.](#) When a prescription drug is dispensed pursuant to an order, the name of the drug that appears on the container label shall correspond with the identity of the drug contained therein unless otherwise requested by the practitioner.

[b.](#) When a prescription drug is dispensed to a patient for outpatient use and contains an opioid that is not prescribed for the treatment of a substance use disorder or is a partial opioid antagonist, the label or container shall bear a notification that states, or is substantially equivalent to: "Caution: Opioids carry a risk of overdose and addiction."

...

3.05.00 Pharmacist Prescribing and Dispensing Over-the-Counter Medications

3.05.10 Pharmacists, pursuant to 12-~~28042-5-1032~~([3427](#)), C.R.S., may prescribe and dispense certain over-the-counter medications ("OTC Medications") to recipients under the Colorado Medical Assistance Act,

- 3.05.20 The formulary of the eligible OTC medications is determined by the Colorado Department of Health Care Policy and Financing or its successor agency. Pharmacists may only prescribe and dispense these eligible medications pursuant to the policies established by the Colorado Department of Health Care Policy and Financing or its successor agency.
- 3.05.30 When prescribing such OTC medications, the pharmacist shall issue a prescription order as defined in 12-~~28042-5-1032~~(3124)(a), C.R.S. The prescribing pharmacist's name shall be used on the prescription order as the name of the practitioner.
- 3.05.40 When issuing the prescription order, the pharmacist shall consult with the recipient to determine necessity and suitability of the medication for the recipient. Written documentation of the necessity and suitability of the medication shall be maintained with the prescription order.
- 3.05.50 Pharmacist prescribed OTC prescriptions shall require a written prescription order.
- 3.05.60 Written prescription orders are not eligible for prescription transfer and cannot be refilled.
- 3.05.70 The pharmacist shall review the recipient's drug therapy history for potential drug interactions.
- 3.05.80 When dispensing the medication, the pharmacist shall label the product with all labeling requirements of 12-~~28042-5-1241~~, C.R.S. The prescribing pharmacist's name shall be used on the label as the name of the practitioner.
- 3.05.90 Upon delivery of the medication to the recipient, the pharmacist shall provide consultation with the recipient or his or her caregiver as required by the Colorado Department of Health Care Policy and Financing. The Colorado Department of Health Care Policy and Financing sets forth the requirements in 10 CCR 2505-10, 8.800 of June 30, 2018. This incorporation does not include later revisions of the rule. Copies of the rule are available for public inspection during regular business hours at 1570 Grant Street, Denver, Colorado, 80203. The rules are readily available in written or electronic form at <http://www.sos.state.co.us/CCR/GenerateRulePdf.do?ruleVersionId=7643&fileName=10%20CCR%202505-10%208.800>. The rules are available for a reasonable fee from the Department of Regulatory Agencies, Division of Professions and Occupations.
- 3.05.95 The prescription order issued, documentation of medication necessity and suitability, and records of dispensing shall be maintained at the prescription drug outlet as required by Rule 11.00.00.

**6.00.00 PHARMACEUTICAL CARE, DRUG THERAPY MANAGEMENT AND PRACTICE BY
PROTOCOL. (REPEALED)**

6.00.10 Definitions:

- a. ~~“Pharmaceutical care” means the provision of drug therapy and other pharmaceutical patient care services by a pharmacist intended to achieve outcomes related to the cure or prevention of a disease, elimination or reduction of a patient's symptoms, or arresting or slowing of a disease process. In addition to the preparation, dispensing, and distribution of medications, “pharmaceutical care” may include assessment and evaluation of the patient's medication related needs and development and communication of a therapeutic plan with defined outcomes in consultation with the patient and the patient's other health care professionals to attain the desired outcome. This function includes efforts to prevent, detect, and resolve medication related problems for individual patients. “Pharmaceutical care” does not include prescriptive authority.~~
- b. ~~For the purpose of this Board Rule 6.00.00, a “prescriber” means a physician who is actively and unconditionally licensed by the Colorado Medical Board or an advanced~~

~~practice registered nurse with prescriptive authority who is actively and unconditionally licensed by the Colorado State Board of Nursing.~~

c. ~~Drug therapy management means the review and evaluation of drug therapy regimens for patients undertaken by a pharmacist in order to provide drug therapy, monitor progress, and modify drug therapy. Drug therapy management may only be undertaken pursuant to an initial diagnosis made by a prescriber, a valid order for the therapy, and a written agreement, which delineates proper protocols, to be used and the type of interaction that must occur between the pharmacist and the prescriber. Therapeutic interchange programs in inpatient and group model integrated closed HMO settings that are approved by medical staff committees are not considered drug therapy management for purposes of these rules.~~

d. ~~Drug therapy management may include:~~

- ~~1. Collecting and reviewing patient drug histories;~~
- ~~2. Obtaining and checking vital signs;~~
- ~~3. Ordering and evaluating the results of laboratory tests directly, related to management of the drug therapy when performed in compliance with the protocol ordered by the prescriber;~~
- ~~4. Modifying drug therapy, when appropriate, in compliance with the protocol ordered by the prescriber; and~~
- ~~5. Implementing the drug therapy plan agreed upon between the prescriber and the pharmacist, using protocols and managing the therapy according to those protocols.~~

e. ~~Protocol means a specific written plan for a course of medical treatment containing a written set of specific directions created by the prescriber, groups of prescribers, hospital medical committee, or pharmacy and therapeutics committee.~~

- ~~1. Protocols must describe the nature and scope of drug therapy management appropriate for certain conditions or diagnoses, and include specific directions for the drug to be used, the specified dosage regimen, dosage forms or route of administration which are authorized. Protocols must include clear criteria and specific directions pharmacists are to follow when implementing and monitoring drug therapy. If the protocol includes ordering and evaluating laboratory tests, the protocol must provide precise instruction as to what tests are to be ordered, the criteria for ordering the tests, how the tests are to be interpreted, and what action the pharmacist is to take dependent upon the test results. If the protocol includes modifying drug therapy, the protocol must provide precise instruction as to the criteria dictating a change, and exactly how the therapy is to be changed.~~
- ~~2. Protocols without specific directions regarding patient treatment or those that are nonspecific, vague, or rely on discretion without definition, are insufficient and may not be used in drug therapy management by the prescriber or the pharmacist.~~
- ~~3. Protocols must also include specific instructions for responding to acute allergic or other adverse reactions. The protocols shall be signed and dated by the authorizing prescriber or chairperson of the authorizing group or committee.~~

4. Evidence-based protocols. Protocols used by prescribers and pharmacists engaging in drug therapy management must demonstrate a plan of treatment that constitutes evidence-based medicine. This means that the plan of treatment must be guided by or based on current, objective, supportive scientific evidence as published in scientific literature rather than anecdotal observations. Through the use of such protocols, drug therapy management must provide care that meets the standard of care in all applicable professions.
5. The protocols shall be signed and dated by the authorizing prescriber or chairperson of the authorizing group or committee.
- f. Agreement means a written agreement between a Colorado-licensed pharmacist and a Colorado-licensed prescriber, or a group of Colorado-licensed pharmacists and a group of Colorado-licensed prescribers that sets forth the specific information required to assure the competent practice of pharmacy in an integrated health care fashion. Either party may withdraw from the agreement at any time.

6.00.20 Drug therapy management requirements for all practice settings.

- a. Drug therapy management may only be conducted by a pharmacist upon the presentation of a valid order for a specific, individual patient from that patient's prescriber. The order must specify the protocol to be used, and the protocol must either accompany the order, or otherwise be provided to the pharmacist in advance of starting drug therapy management.
- b. The pharmacist must ensure that the prescriber with whom the pharmacist is working is licensed in Colorado, in good standing, and the protocols used are within the scope of the prescriber's current practice.
- c. Prior to initiation of drug therapy management in any setting, the pharmacist or institution must inform the patient that he/she may refuse to participate in drug therapy management. Inpatient or group model integrated closed HMO settings may use the patient's signature on the institution's general consent to treat as the patient's indication to participate in drug therapy management.
- d. At a minimum the written agreement for carrying out drug therapy management between prescribers and pharmacists shall be reviewed annually, and revised, if necessary.
- e. Pharmacists may perform by protocol all aspects of drug therapy management referenced in 6.00.10 c and d, provided the protocol complies with 6.00.10e, and the pharmacists performing these functions are qualified as set forth in section 6.00.30 and are working pursuant to a written agreement with an appropriately qualified prescriber.
- f. Filing requirements.
 1. Pharmacists engaging in drug therapy management must maintain a current copy of the written agreement between the prescriber and the pharmacist at the location where drug therapy management is occurring. Pharmacists conducting such therapy in inpatient settings or group model integrated closed HMO's shall maintain a current copy of the general authorization plan as required by 6.00.40 at the location where drug therapy management is occurring. Upon request by the Board or its inspectors such written agreements and general authorization plans shall be submitted to the Board.

2. Pharmacists practicing drug therapy management must also provide the Board documentation of their successful completion of all qualification requirements as set forth below in 6.00.30 upon request. Copies of pharmacy degrees are not required. Copies of completion of residency or other educational programs or certifications must be on file in the location of practice. Attestations from the supervising pharmacist or prescriber for clinical practice must be on file.
3. Pharmacists practicing drug therapy management must have a copy of the pertinent protocols at the location at which they are practicing. Upon request by Board inspectors, pharmacists must produce the scientific literature upon which their protocols are derived.

6.00.30 Pharmacist Qualifications:

Any pharmacist engaged in drug therapy management shall meet the following qualifications:

- a. Have and maintain an unrestricted license in good standing to practice pharmacy in Colorado; and
- b. Meet one of the following qualifications:
 1. Proof of completion of a pharmacy residency accredited by the American Society of Health Systems Pharmacists or the American Pharmacists Association in the specialty being practiced; or
 2. Proof of completion of one (1) year of practice experience in pharmacotherapy, and 40 hours of onsite supervised clinical practice and training in each area in which the pharmacist is choosing to practice; or
 3. Completion of a certificate program accredited by the Accreditation Council for Pharmacy Education in each area of practice, and 40 hours of on-site supervised clinical practice and training in each area in which the pharmacist is choosing to practice; or
 4. Completion of at least 40 hours of ACPE approved continuing education regarding clinical practice and 40 hours of onsite supervised clinical practice and training in the area in which the pharmacist is choosing to practice; or
 5. Current Board specialty certification from the Board of Pharmaceutical Specialties, current certification from the National Institute for Standards in Pharmacist Credentialing, or current certification from the Commission for Certification in Geriatric Pharmacy. Such credentials must be in the area of pharmacy practice undertaken in the drug therapy management; or
 6. In an inpatient or group model integrated closed HMO setting, all of the following criteria shall be met in order to practice drug therapy management:
 - a. Forty (40) hours of onsite supervised clinical practice and training in the area(s) in which the pharmacist is choosing to practice;
 - b. Protocols must be approved by the health system's medical committee, or pharmacy and therapeutics committee; and
 - c. Documented competency of each area of practice in which the pharmacist is choosing to practice shall be maintained on site.

- c. — Licensed Colorado pharmacists practicing drug therapy management prior to August 1, 2005, must attest and certify that they were provided clinical training, experience, and oversight practicing in the disease state(s) that they work in, and the physician with whom they are currently practicing must attest that they are practicing to the standard of care required for management of the specific disease. Such attestations must be on file at the site of practice. Documentation of their employment dates must be on file as proof of practice prior to August 2, 2005.

6.00.40 Drug Therapy Management in Inpatient and Group Model Integrated Closed HMO Settings:

- a. — Pharmacists engaging in drug therapy management in inpatient and group model integrated closed HMO settings must conduct activities pursuant to a valid order and must follow the protocols set forth by the hospital medical committee, or pharmacy and therapeutics committee. They must record all of the items required in subsection c. below for each patient, or the hospital may create a general authorization plan, identifying where such information will be located, and how it will be accessed throughout the facility by participating pharmacists and prescribers. The general authorization plan serves as the pharmacist/prescriber agreement in these settings. The general authorization plan must identify which prescribers and pharmacists are authorized and have agreed to participate in the facility to engage in drug therapy management. The hospital medical committee or pharmacy & therapeutics committee serves as the authorizing agent for the organization's medical staff, identifying which prescriber groups are authorized to participate, and may restrict authorization for certain protocols to specific prescriber groups or specialties. A pharmacist engaging in drug therapy management must read, sign and date the plan and the pertinent protocols that he/she agrees to use in the cases undertaken.
- b. — The pharmacist manager shall ensure that the general authorization plans for drug therapy management are on file in the prescription drug outlet. Changes to the plan must be made as they occur, including the identification of persons participating. Protocols shall be onsite where the drug therapy management takes place and revised as medically necessary.
- c. — Prior to initiation of drug therapy management, the pharmacist must review the following information:
 - 1. — Patient's name, gender, date of birth, height, and weight;
 - 2. — Patient diagnosis or diagnoses (from physician);
 - 3. — Medication history;
 - 4. — Prior lab values;
 - 5. — Patient vital signs;
 - 6. — Patient known allergies;
 - 7. — Emergency contact number.
- d. — Records of all activity by the pharmacist shall be documented in the patient's chart prior to administration.
- e. — Pharmacists engaging in drug therapy management shall not delegate drug therapy management activities to any other staff.

6.00.50 Drug Therapy Management in other settings.

- a. ~~Every pharmacist or group of pharmacists engaged in drug therapy management in an outpatient setting must have a valid order from the patient's prescriber for each specific patient for such therapy, and must operate according to a written agreement and protocol referenced in section 6.00.10.~~
- b. ~~Written agreements shall contain the following information:~~
 - 1. ~~Participating pharmacist name(s);~~
 - 2. ~~Participating prescriber name(s);~~
 - 3. ~~Diagnoses relevant to the drug therapy to be managed and other patient conditions relevant to maintenance of the patient's health during drug therapy management;~~
 - 4. ~~Protocols to be employed;~~
 - 5. ~~Functions and activities the pharmacist will perform, and restrictions or limitations on the pharmacist's management;~~
 - 6. ~~Method, content and frequency of reports to the prescriber;~~
 - 7. ~~Manner in which pharmacist's drug therapy management will be monitored by the prescriber, including method and frequency;~~
 - 8. ~~A specified time, not to exceed 24 hours, within which the pharmacist must notify the prescriber of any modifications of drug therapy;~~
 - 9. ~~A provision that allows the prescriber to override any action taken by the pharmacist when the prescriber deems it to be necessary;~~
 - 10. ~~An effective date of the agreement, and signatures of both parties.~~
 - 11. ~~A provision addressing how drug therapy management will be handled when the patient has more than one prescriber involved in evaluating or treating the medical condition which is the subject of the agreement. All prescribers who are actively involved in the management of the relevant conditions shall be parties to the agreement.~~
- c. ~~Prior to implementation of drug therapy management, pharmacists shall secure the following information:~~
 - 1. ~~Patient's name, gender, date of birth, height, and weight;~~
 - 2. ~~Patient diagnosis or diagnoses (from prescriber);~~
 - 3. ~~Medication history;~~
 - 4. ~~Prior lab values;~~
 - 5. ~~Patient vital signs;~~
 - 6. ~~Patient known allergies;~~

7. ——— Emergency contact number.

d. ——— Pharmacists engaging in drug therapy management shall not delegate drug therapy management responsibilities to any other staff.

6.00.60 Recordkeeping.

a. ——— Pharmacists must document all actions taken in drug therapy management, including but not limited to any data required by the protocol. Records of each patient visit must be transmitted to the prescriber in the manner specified in the agreement. Records must indicate when and how the record was transmitted to the prescriber.

b. ——— Pharmacists must keep patient records that include:

1. ——— Patient's name, gender, date of birth, height, and weight;

2. ——— Patient diagnosis or diagnoses (from physician);

3. ——— Medication history;

4. ——— Prior lab values;

5. ——— Patient vital signs;

6. ——— Patient known allergies;

7. ——— Date and time the service was rendered;

8. ——— Type of service rendered;

9. ——— Results of interviews with the patient and any diagnostic tests or other pertinent information about the patient's disease;

10. ——— When and how the record was transmitted to the prescriber; and

11. ——— Emergency contact number.

6.00.70 Retention of Records.

a. ——— All records of drug therapy management shall be retained for a minimum of seven years from the last date of drug therapy management, or seven years from the patient's 18th birthday, whichever is later. Such records shall be available for inspection by the patient, the prescriber, the Board, or any other authorized local, state, or federal law enforcement or regulatory agency.

b. ——— Records may be maintained in an alternative data retention system, such as a data processing system or direct imaging system provided that:

1. ——— The records maintained in the alternative system contain all of the information required on the manual record;

2. ——— The data processing system is capable of producing a hard copy of the record upon the request of the Board, its representative, or of other authorized local, state, or federal law enforcement or regulatory agencies;

3. ~~_____ A back-up is conducted of the data processing system every 24 hours; and~~

4. ~~_____ The records are immediately available for the previous two years.~~

6.00.90 Confidentiality.

a. ~~_____ The pharmacist shall provide adequate security to prevent indiscriminate or unauthorized access to confidential records. If confidential health information is transmitted through a data communication device, the confidential health information may not be accessed or maintained by the operator of the data communication device unless specifically authorized to do so by the patient.~~

b. ~~_____ Patient information is confidential and may be released only as authorized by state and federal law. All protected health information obtained and maintained, including that obtained from the physician or other providers, must be strictly controlled in accordance with the requirements of Health Insurance Portability and Accountability Act of 1996 and any rules promulgated pursuant to the act and other federal and state laws and rules. Specifically, pharmacists can only release patient information to:~~

1. ~~_____ The patient or the patient's agent;~~

2. ~~_____ A practitioner or another pharmacist if, in the pharmacist's professional judgment, the release is necessary to protect the patient's health and well-being;~~

3. ~~_____ The Board or to a person or another state or federal agency authorized by law to receive the confidential record;~~

4. ~~_____ A person employed by a state agency that licenses a practitioner, if the person is performing the person's official duties; and/or~~

5. ~~_____ An insurance carrier or other third party payer authorized by the patient to receive the information.~~

6.01.10 Participation Not Mandatory.

a. ~~_____ No person or entity, as a condition of employment, participation on an insurance provider panel, or otherwise, shall require any prescriber to participate in or authorize drug therapy management.~~

6.01.20 Board Review.

a. ~~_____ Board staff will review compliance with this rule and report to the Board regarding complaints and other relevant data associated with the rule every three years.~~

7.00.00 PHARMACIST MANAGER RESPONSIBILITIES.

...

7.00.30 Compliance of Outlet:

...

- c. Except as provided in sections 25.5-2.5-201 through 25.5-2.5-206, C.R.S., the pharmacist manager is responsible for ensuring that all prescription drugs and controlled substances are procured by the outlet from an entity or person registered by the Board. Any drug designated as an Investigational New Drug from the Federal Food and Drug Administration is exempt from this requirement provided the research requirements for the receipt of the product are followed and it meets the requirements of section CRS 12-28042.5-13128(2), C.R.S.

11.00.00 RECORDS AND RECORDKEEPING.

...

11.03.00 Inventories of Controlled Substances. Any inventory of controlled substances shall comply with the following:

- a. If the outlet is registered with the Drug Enforcement Administration as a "hospital/clinic", or is owned and operated by a health maintenance organization (as defined in sSection 10-16-102, C.R.S.), or the veterinary hospital owned and operated by Colorado State University or its successor organization, the inventory shall include all drugs located throughout the facility, excluding any drug which has been dispensed pursuant to a lawful chart order but which has not yet been administered to the patient.

...

11.07.10 Records of distribution of controlled substances and prescription drugs within hospitals and facilities owned and operated by a health maintenance organization (as defined in sSection 10-16-102, C.R.S.). Records of distribution of controlled substances and prescription drugs shall comply with the following:

- a. In a hospital or a facility owned and operated by health maintenance organization or the veterinary hospital owned and operated by Colorado State University or its successor organization which operates a registered prescription drug outlet, a controlled substance or prescription drug may be distributed for floor stock to appropriate areas within the hospital or facility. A record of any such distribution shall be made and retained by the prescription drug outlet for a period of time not less than two years and shall include the following information:

14.00.00 OTHER OUTLETS.

14.00.05 Eligibility for registration. The following facilities may register as other outlets provided all requirements are met:

...

m. Convalescent centers registered, certified, or licensed as such by the Colorado Department of Public Health and Environment.

...

14.00.40 Application Procedure.

...

f. Change of Registration.

- (1) Any other outlet located in a community health clinic, rural health clinic, college, or university which dispenses more than 25,000 dispensing units in a calendar year shall register with the Board as a prescription drug outlet. Any telepharmacy that dispenses more than 50,000 units in a calendar year shall register with the Board as a prescription drug outlet.
- (2) Any other outlet located in a hospital which has greater than 25 beds as stated on its license with the Colorado Department of Public Health and Environment shall register as a prescription drug outlet.

...

14.00.80 Consultant pharmacist.

...

e. The consultant pharmacist shall inspect and document the inspection in writing as detailed in 14.00.80(d) the following other outlets at the following frequencies:

- (1) Quarterly inspections and visits shall be conducted for the following:
 - (a) Jails;
 - (b) County health departments;
 - (c) Schools, grade kindergarten through twelve;
 - (d) Hospitals;
 - (e) Family planning clinics;
 - (f) Hospices;
 - (g) Medical clinics operated by hospitals; ~~and~~
 - (h) Ambulatory Surgical Centers; ~~and~~
 - (i) Convalescent centers.
- (2) Community clinics, federally qualified health centers, rural health clinics, colleges, acute treatment units, ~~telepharmacies~~, and universities shall be inspected and visited as follows:

- (a) Monthly if 2,500 or less dispensing units are dispensed in a calendar year. A calendar year is ~~considered to run~~ from January 1 through December 31.
- (b) Every other week if ~~more than 2,500 or more~~ but less than 7,501 dispensing units are dispensed in a calendar year. A calendar year is ~~considered to run~~ from January 1 through December 31.
- (c) Each week if ~~7,501 or more~~ 1 dispensing units but less than 12,501 dispensing units are dispensed in a calendar year. A calendar year is ~~considered to run~~ from January 1 through December 31.
- (d) Twice each week if ~~12,501 or more~~ 1 dispensing units but less than 25,001 dispensing units are dispensed in a calendar year. A calendar year is ~~considered to run~~ from January 1 through December 31.

(3) Telepharmacies shall be inspected and visited as follows:

- (a) Once every three months if 2,500 or more but less than 12,501 dispensing units are dispensed in a calendar year. A calendar year is from January 1 through December 31.
- (b) Once per month if 12,501 or more but less than 25,001 dispensing units are dispensed in a calendar year. A calendar year is from January 1 through December 31.
- (c) Twice per month if 25,001 or more dispensing units but less than 50,000 dispensing units are dispensed in a calendar year. A calendar year is from January 1 through December 31.

...

15.00.00 WHOLESALEERS.

...

15.01.11 Minimum required information for registration.

- a. The following minimum information shall be required from each wholesaler as part of the registration:
 - (1) The name, full business address, and telephone number of the applicant;
 - (2) All trade or business names used by the applicant;
 - (3) Addresses, telephone numbers, and the names of contact persons for all facilities used by the applicant for the storage, handling and distribution or prescription drugs;
 - (4) The type of ownership or operation (i.e., partnership, corporation, sole proprietorship, limited liability company, or government entity); and
 - (5) The name(s) of the owner and operator of the applicant including:
 - (a) If a person, the name of the person;

- (b) If a partnership, the name of each partner, the name of the partnership, and the federal employer identification number (FEIN);
 - (c) If a corporation, the name and title of each corporate officer and director, the name of the parent company, the corporate names, the federal employer identification number of the business, and the name of the state of incorporation; and
 - (d) Name of the business entity. If a sole proprietorship, the full name of the sole proprietor, and the name and federal employer identification number of the business entity.
 - (e) If a government entity, identify the name of director and the name of the governmental agency he/she represents.
- (6) If a limited liability company, the name and title of each member, federal employer identification number (FEIN) of the business, and name of parent company, if any.
- (7) A list of the licenses and permits issued to the applicant by any other state that authorizes the applicant to purchase or possess prescription drugs.
- (8) The name of the applicant's designated representative, who must meet the following requirements:
- (a) Be at least twenty-one years of age;
 - (b) Have at least three years of full-time employment history with a pharmacy or a wholesaler in a capacity related to the dispensing and distribution of and the recordkeeping related to prescription drugs;
 - (c) Be employed by the applicant in a full-time managerial position;
 - (d) Be actively involved in and aware of the actual daily operation of the wholesaler;
 - (e) Be physically present at the facility of the applicant during regular business hours, except when the absence of the designated representative is authorized, including, but not limited to, sick leave and vacation leave;
 - (f) Serve in the capacity of a designated representative for only one applicant or wholesaler at a time, except where more than one licensed wholesaler is co-located in the same facility and the wholesalers are members of an affiliated group as defined by section 1504 of the federal "Internal Revenue code of 1986."
 - (g) Not have any convictions under federal, state, or local law relating to wholesale or retail prescription drug distribution or controlled substances;
 - (h) Not have an felony convictions pursuant to federal, state, or local law; and
 - (i) Undergo a background check as required by [section CRS 12-28042.5-304, C.R.S.](#)

- (9) Wholesalers that distribute animal health medicines drugs exclusively must have a designated representative. However, the requirements of 15.01.11a(8) is(g) through (i) are not required. For the purpose of this Rule 15.00.00, an "animal health medicine" means a prescription drug, regardless of whether the drug is originally intended for humans or animals, that will be distributed by a wholesaler only to an animal pursuant to an order issued by a veterinarian or directly to a veterinarian authorized by law to prescribe the drug.

...

15.09.14 Receipts.

- a. Except as provided in sections 25.5-2.5-201 through 25.5-2.5-206, C.R.S., in-state prescription drug wholesalers shall only receive prescription drugs and controlled substances from an entity that is registered by the Board. This section shall not apply to intracompany or reverse distribution transactions.

17.00.00 COLLABORATIVE PHARMACY PRACTICE.

17.00.10 Definitions.

- a. "Pharmaceutical care" means the provision of drug therapy and other pharmaceutical patient care services by a pharmacist intended to achieve outcomes related to the cure or prevention of a disease, elimination or reduction of a patient's symptoms, or arresting or slowing of a disease process. In addition to the preparation, dispensing, and distribution of medication, "pharmaceutical care" may include assessment and evaluation of the patient's medication related needs and development and communication of a therapeutic plan with defined outcomes in consultation with the patient and the patient's other health care professionals to attain the desired outcomes. This function includes efforts to prevent, detect, and resolve medication related problems for individual patients. "Pharmaceutical care" does not include prescriptive authority; except that a pharmacist may prescribe over-the-counter medications to a recipient under the Colorado Medical Assistance Act or pursuant to a Statewide Protocol.
- b. "Collaborative pharmacy practice agreement," or "collaborative practice agreement" (CPA), means a written and signed agreement entered into voluntarily between one or more Colorado-licensed pharmacists and one or more Colorado-licensed prescribers, which statement grants authority to the pharmacist or pharmacists to provide evidence-based healthcare services to one or more patients pursuant to a specific treatment protocol delegated to a pharmacist or pharmacists by the prescriber or prescribers. Either party may withdraw from an agreement at any time.
1. "Collaborative drug therapy management" (CDTM) is a collaborative practice agreement involving a higher level of disease complexity and/or decision making. CDTM means the review and evaluation of drug therapy regimens for patients undertaken by a pharmacist in order to provide drug therapy, monitor progress, and initiate, modify, or discontinue drug therapy. Drug therapy management may only be undertaken pursuant to an initial diagnosis made by a prescriber, a valid order for the therapy or therapies to be utilized, and a written agreement, which delineates proper protocols, to be used and the type of interaction that must occur between the pharmacist and the prescriber. Therapeutic interchange programs in inpatient and group model integrated closed HMO settings that are approved by medical staff committees are not considered drug therapy management for purposes of these rules.

cb. "Collaborative pharmacy practice agreement," or "collaborative practice agreement," may also mean a statewide drug therapy protocol, or "statewide protocol," developed by the Board, the Colorado Medical Board, and the Colorado State Board of Nursing in collaboration with the Colorado Department of Public Health and Environment for public healthcare services under which a pharmacist may have prescriptive authority as a practitioner.

de. "Evidence-based healthcare service" means a healthcare service provided by a Colorado-licensed pharmacist pursuant to a collaborative practice agreement statewide-protocol or an agreement and protocol with a Colorado-licensed prescriber or prescribers which is guided by or based on current, objective, supportive scientific evidence as published in scientific literature as opposed to anecdotal observations.

~~For the purpose of this Board Rule 17.00.00, evidence-based healthcare service does not mean "Drug therapy management" as defined and governed under Board Rule 6.00.00.~~

ed. "Prescriber", for the purpose of this Board Rule 17.00.00, means a physician who is actively licensed by the Colorado Medical Board or an advanced practice registered nurse who is actively licensed by the Colorado State Board of Nursing.

fe. "Protocol" means a specific written plan for a course of medical treatment containing a written set of specific directions created by a prescriber or groups of prescribers in conjunction with the participating pharmacist(s).

17.00.30 Pharmacist Qualifications.

- a. A pharmacist may enter into a collaborative pharmacy practice agreement with one or more prescriber if:
1. The pharmacist holds a current license to practice in Colorado;
 2. The pharmacist is engaged in the practice of pharmacy;
 3. The pharmacist has earned a Doctor of Pharmacy degree or completed at least five (5) years of experience as a licensed pharmacist;
 4. The pharmacist agrees to devote a portion of his or her practice to collaborative pharmacy practice;
 5. There is a process in place for the physician, advanced practice registered nurse, and pharmacist to communicate and document changes to the patient's medical record; and
 6. The pharmacist carries adequate professional liability insurance in coverage of at least \$1,000,000 per incident and at least \$3,000,000 in aggregate.

7. Pharmacists practicing under CDTM protocols must also:

a. Meet one of the following qualifications:

1. Proof of completion of a pharmacy residency accredited by the American Society of Health Systems Pharmacists in the specialty being practiced or;

2. Proof of completion of one year of practice experience in pharmacotherapy, and forty hours of onsite supervised clinical practice and training in each area in which the pharmacist is choosing to practice; or
 3. Completion of a certificate program accredited by the Accreditation Council for Pharmacy Education in each area of practice, and forty hours of on-site supervised clinical practice and training in each area in which the pharmacist is choosing to practice; or
 4. Completion of at least forty hours of ACPE approved continuing education regarding clinical practice and 40 hours of on-site supervised clinical practice and training in the area in which the pharmacist is choosing to practice; or
 5. Current Board specialty certification from the Board of Pharmaceutical Societies; or
 6. In an inpatient setting, all the following criteria shall be met in order to practice drug therapy management:
 - a. Forty hours of on-site supervised clinical practice and training in the area(s) in which the pharmacist is choosing to practice;
 - b. Protocols must be approved by the health-system's medical committee, or pharmacy and therapeutics committee; and
 - c. Documented competency in each area of practice in which the pharmacist is choosing to practice shall be maintained on site.
 - b. Licensed Colorado pharmacists collaborative drug therapy management prior to August 1, 2005, must attest and certify that they were provided clinical training, experience, and oversight practicing in the disease state(s) that they work in, and the physician with whom they are currently practicing must attest that they are practicing the standard of care required for management of the specific disease. Such attestations must be on file at the site of practice. Documentation of their employment dates must be on file as proof of practice prior to August 2, 2005.
- b. This Board Rule 17.00.00 shall not prevent a pharmacist or pharmacy intern from administering vaccines and immunizations pursuant to the authorization of a physician as permitted pursuant to Board Rule 19.00.00.
- 17.00.50 Evidence-Based Healthcare Services Pursuant to Statewide Protocol.
- a. A process shall be in place for the pharmacist to communicate with the patient's primary care provider and document changes to the patient's medical record. If the patient does not have a primary care provider, or is unable to provide contact information for his or her primary care provider, the pharmacist shall provide the patient with a written record of the drugs or devices furnished and advise the patient to consult an appropriate health care professional of the patient's choice.

- b. A statewide protocol shall, at minimum, contain the following information:
1. The nature and scope of evidence-based healthcare services appropriate for certain conditions or diagnoses, and include specific directions for the patient information to be obtained, the drug therapies to be dispensed, the specified dosage regimen, and dosage forms and route of administration which are authorized. Protocols must include criteria and specific directions pharmacists are to follow when providing evidence-based healthcare services. If the protocol includes conducting physical assessments or ordering and evaluating laboratory or other tests, the protocol shall provide precise instruction as to what assessments are needed to be conducted and what tests are to be ordered, the criteria for ordering the assessments and tests, how the assessments and tests are to be interpreted, and what action the pharmacist is to take dependent upon the assessments and test results;
 2. The pharmacist training necessary to perform the functions set forth in the statewide protocol; which shall include the following:
 - A. A review/update of the disease or condition and the pertinent evidence base to be used by the pharmacist;
 - B. The pharmacology and mechanism of action or medications;
 - C. The relative effectiveness of various medication options;
 - D. Factors and considerations required for patient-centered medication selection;
 - E. Assessment of advantages and disadvantages of various approved medication options;
 - F. Monitoring considerations of approved medications including management of potential adverse events;
 - G. Required patient counseling considerations for approved medications; and
 - H. Identification of patients that should be referred to a primary care provider (or other appropriate resource) at any point during the protocol, or at follow up, and standardized referral process (if applicable).

...

17.00.70 Evidence-Based Healthcare Service Pursuant to a CPA Protocol (other than a statewide protocol) Agreement and Protocol with a Prescriber or Prescribers.

- a. Unless a statewide protocol is in place, a pharmacist shall not enter into a collaborative pharmacy practice agreement with a prescriber if the prescriber does not have an established relationship with the patient or patients who will be served by the pharmacist under the collaborative pharmacy practice agreement.
- b. A pharmacist or prescription drug outlet shall not employ a prescriber for the sole purpose of forming a collaborative practice agreement.
- c. Written agreements shall contain the following information:

1. Participating pharmacist name(s);
 2. Participating prescriber name(s);
 3. The nature and scope of evidence-based healthcare services appropriate for certain conditions or diagnoses;
 4. Protocols to be employed;
 5. Functions and activities the pharmacist or pharmacists will perform;
 6. Method, content and frequency of communication to the prescriber;
 7. A provision that allows the prescriber to override any action taken by the pharmacist when the prescriber deems it to be necessary;
 8. An effective date of the agreement, and signatures of both the participating prescriber or prescribers and pharmacist or pharmacists; and
 9. A provision addressing how evidence-based healthcare services will be handled and communicated when the patient has more than one prescriber involved in evaluating or treating the medical condition which is the subject of the agreement.
- d. A protocol pursuant to an agreement between a pharmacist or pharmacists and a prescriber or prescribers shall, at minimum, contain the following information:
1. The nature and scope of evidence-based healthcare services appropriate for certain conditions or diagnoses, and include specific directions for the patient information to be obtained, the drug therapies to be dispensed, the specified dosage regimen, and dosage forms and route of administration which are authorized. Protocols must include criteria and specific directions pharmacists are to follow when providing evidence-based healthcare services. If the protocol includes conducting physical assessments or ordering and evaluating laboratory or other tests, the protocol shall provide precise instruction as to what assessments are needed to be conducted and what tests are to be ordered, the criteria for ordering the assessments and tests, how the assessments and tests are to be interpreted, and what action the pharmacist is to take dependent upon the assessments and test results;
 2. The pharmacist training necessary to perform the functions set forth in the protocol;
 3. Specific instructions for responding to acute allergic or other adverse reactions, if applicable;
 4. A plan of treatment guided by or based on current, objective, supportive scientific evidence as published in scientific literature that provides the generally accepted standard of care in all applicable professions;
 5. Specific criteria upon which a patient must not be provided care under the protocol and instead referred to the patient's primary care provider for services; and

6. An effective date of the protocol, and signatures of the authorized prescriber or prescribers.

e. Additionally to all items described above, the following applies to CDTM:

1. Drug therapy management may include:

- a. Collecting and reviewing patient drug histories;
- b. Obtaining and checking vital signs;
- c. Ordering and evaluating the results of laboratory tests directly, related to management of the drug therapy;
- d. Initiate, modify, or discontinue drug therapy or therapies, when appropriate, in compliance with the protocol ordered by the prescriber;
- e. Implementing the drug therapy plan agreed upon between the prescriber(s) and the pharmacist(s), using protocols and managing the therapy according to those protocols; and
- f. Provision of other healthcare services as agreed upon in the protocol as relating to drug therapy management.

2. CDTM protocol means a specific written plan for course of medical treatment containing a written set of specific directions created by the prescriber, groups of prescribers, hospital medical committee, pharmacist, groups of pharmacists, or a pharmacy and therapeutics committee.

- a. Protocols must describe the nature and scope of drug therapy management appropriate to conditions or diagnosis, and include specific treatment protocol. Protocols must include clear criteria and specific direction for the pharmacist to follow, based on evidence-based guidelines, when implementing, monitoring, or discontinuing drug therapy or therapies.
- b. The protocols shall be signed and dated by the authorizing prescriber or chairperson of the authorizing group or committee.
- c. Evidence-based protocols. Protocols used by prescribers and pharmacists engaging in drug therapy management must demonstrate a plan of treatment that constitutes evidence-based medicine. This means that the plan of treatment must be guided by or based on current, objective, supportive scientific evidence as published in scientific literature rather than anecdotal observations.

f. Agreement means a written agreement between a Colorado pharmacist and a Colorado prescriber, or a group of Colorado pharmacists and Colorado prescribers. Either party may withdraw from the agreement at any time.

17.00.80 Collaborative drug therapy management requirements for all practice settings.

- a. Collaborative drug therapy management may only be conducted by a pharmacist or pharmacists upon the presentation of a valid order for one or more patients from one or more prescribers. The order must specify the protocol to be used, and the protocol must

either accompany the other, otherwise be provided to the pharmacist(s) in advance of starting drug therapy management.

b. The pharmacist(s) must ensure that the prescriber(s) with whom the pharmacist(s) is/are working is/are licensed in Colorado, in good standing, and the protocols used are within the scope of the prescriber's current license.

c. Prior to initiation of drug therapy management in any setting, the pharmacist or institution must inform the patient that s/he may refuse to participate in drug therapy management. Inpatient or integrated health system settings may use the patient's signature on the institution's general consent to treat as the patient's indication to participate in drug therapy management.

d. At a minimum, the written agreement for carrying out drug therapy management between prescribers and pharmacists shall be reviewed annually, and revised, if necessary.

e. Pharmacists may perform by protocol all aspects of drug therapy management referenced in 6.00.10(c) and (d), provided the protocol complies with 6.00.10(e), and the pharmacist performing these functions are qualified as set forth in section 6.00.30 and are working pursuant to a written agreement with an appropriate qualified prescriber.

f. Filing requirements.

1. Pharmacists engaging in collaborative drug therapy management must maintain a current copy of the written agreement between the prescriber and the pharmacist at the location where drug therapy management is occurring. Upon requests by the Board or its inspectors, such written agreements and general authorization plans shall be submitted to the Board.

2. Pharmacists practicing collaborative drug therapy management must also provide to the Board documentation of their successful completion of all qualification requirements as set forth below in 6.00.30 upon request. Copies of pharmacy degrees are not required. Copies of completion of residence or other education programs or certifications must be on file in the location of practice. Attestations from the supervising pharmacist or prescriber for clinical practice must be on file.

3. Pharmacists practicing collaborative drug therapy management must have a copy of the pertinent protocols at which they are practicing. Upon request by Board inspectors, pharmacists must produce the scientific literature upon which their protocols are derived.

17.01.00 Record-Keeping Requirements.

a. Pharmacists ~~Pharmacists engaging in evidence-based healthcare services~~ shall maintain all records of collaborative pharmacy practice agreements, and have readily available for inspection by the Board or its inspectors at the location where evidence-based healthcare services are provided, the following:

1. A current copy of the statewide protocol;
2. The agreement and protocol entered into with a prescriber or prescribers;

3. Documentation reflecting all necessary pharmacist training as specified in either the statewide protocol or protocol entered into with a prescriber or prescribers; and
4. The scientific literature upon which the protocols pursuant to an agreement with a prescriber or prescribers are derived.

be. Records pertaining to all prescriptions dispensed pursuant to this Board Rule 17.00.00 shall comply with all provisions of Board Rules 2.00.00, 3.00.00, and 11.00.00 and, if applicable, Board Rules 20.00.00, 21.00.00, and 26.00.00.

17.02.00 Retention of Records.

- a. All records of collaborative pharmacy agreements ~~All records of evidence-based healthcare services~~ shall be retained for a minimum of three ~~(3)~~ years from the last date of healthcare service. Such records shall be available for inspection by the patient, the prescriber or prescribers, the Board or its inspectors, or any other authorized local, state, or federal law enforcement or regulatory agency.

...

17.03.00 Confidentiality.

...

- b. Patient information is confidential and may be released only as authorized by state and federal law. All protected health information obtained and maintained, including that obtained from the physician or other providers, must be strictly controlled in accordance with the requirements of Health Insurance Portability and Accountability Act of 1996, the HITECH Act of 2009, and other federal and state laws and rules.

17.04.00 Participation Not Mandatory

- a. No person or entity, as a condition of employment, participation on an insurance provider panel, or otherwise, shall require any prescriber to participate in or authorize collaborative practice agreements.

17.05.00 Board Review

- a. Board staff will review compliance with this rule and report to the Board regarding complaints and other relevant data associated with the rule every three years. and any rules promulgated pursuant to the act and other federal and state laws and rules. Specifically, pharmacists can only release patient information to:
 1. The patient or the patient's agent;
 2. A practitioner or another pharmacist if, in the pharmacist's professional judgment, the release is necessary to protect the patient's health and well-being;
 3. The Board or to a person or another state or federal agency authorized by law to receive the confidential record;

- 4. ~~A person employed by a state agency that licenses a practitioner, if the person is performing the person's official duties; and/or~~
- 5. ~~An insurance carrier or other third party payer authorized by the patient to receive the information.~~

19.00.00 ADMINISTRATION.

19.01.00 Vaccines and Immunizations.

19.01.10 Qualifications.

- a. A pharmacist certified in immunization, or pharmacy intern under the supervision of a pharmacist certified in immunization, may administer vaccines and immunizations per authorization of a physician. A copy of the authorization shall be maintained at the prescription drug outlet. Routine childhood immunizations, as defined by the Colorado State Board of Health, shall comply with CDC guidelines.

b. Pharmacy interns, as directly part of their normal schedule or college of pharmacy curriculum, who are trained to administer vaccines and immunizations under this Board Rule 19.01.10(c) may administer vaccines and immunizations under the direct supervision of another regulated individual as defined by Board Rule 4.00.10(l) authorized by law to administer vaccines and immunizations as part of their scope of practice.

- cb. Licensees shall be considered "trained" to administer vaccines and immunizations to a person only if:

...

...

23.00.10 Definitions:

- a. "Bona fide investigation," for purposes of an investigation of an individual prescriber under investigation by a state regulatory board, means:

1. Any investigation conducted by any state regulatory board within the Colorado Division of Professions and Occupations, or the Director of the Colorado Division of Professions and Occupations and
2. Investigations pertaining to matters which are the subject of a complaint or notice of charges pending in the Office of Administrative Courts so long as the information obtained from the PDMP is made available by the state regulatory board to the respondent in the pending case.

- b. "Bona fide research or education" means research conducted by qualified entities whose recognized primary purpose is scientific inquiry; the results of which would likely contribute to the basic knowledge of prescribing practitioners, dispensing pharmacists, or entities for the purpose of curtailing substance abuse of consumers. The Board shall determine in its discretion on a case-by-case basis whether an individual or entity seeking access to the PDMP pursuant to [section CRS 12-28042.5-404\(65\), C.R.S.](#), constitutes "bona fide research or education" conducted by qualified personnel for purposes of satisfying the statutory limitations therein.

- c. "Client", as it pertains to a licensed veterinarian's use of the PDMP, means the patient's owner, the owner's agent, or a person responsible for the patient.
- d. "Clinical patient care services" means pharmaceutical care provided in a clinical setting. The pharmacist providing clinical patient care services must be working closely with the physician/prescriber responsible for the patient's care. "Clinical patient care services" do not include monitoring previously dispensed prescriptions for any purpose in the absence of a current assessment of a patient whether in a clinical setting or not.
- e. "Law Enforcement Official" means any of the following:
1. Sheriff;
 2. Undersheriff;
 3. Certified deputy sheriff;
 4. Coroner;
 54. Police Officer;
 65. Southern Ute Police Officer;
 76. Ute Mountain Ute police officer;
 87. Town marshall;
 98. CBI director and agents;
 109. Colorado state patrol officer;
 1110. Colorado attorney general and any entity designated as "peace officers" by the Attorney General or acting on behalf of a state agency;
 1211. Attorney general criminal investigator;
 1312. District attorney and all assistants, deputies, etc. statutorily defined as "peace officers;"
 1413. District Attorney chief investigator and investigators;
 1514. Police administrator and police officers employed by the Colorado State Hospital in Pueblo; and
 1615. Federal special agents.

23.00.70 PDMP Access Release of PDMP Information

The PDMP shall be available for query only to the following persons or groups of persons:

- a. Board staff responsible for administering the PDMP;

- ~~b. — Any licensed practitioner, or up to three (3) trained individuals designated by the practitioner by way of registered PDMP sub-accounts of the prescriber to act on the prescriber's behalf in accordance with 12-42.5-403(1.5)(b), (c) and (d), C.R.S., with the statutory authority to prescribe controlled substances to the extent the query relates to a current patient of the practitioner;~~
- ~~c. — Any licensed veterinarian with statutory authority to prescribe controlled substances, to the extent the query relates to a current patient or to a client and if the veterinarian, in the exercise of professional judgment, has a reasonable basis to suspect the client has committed drug abuse or has mistreated an animal.~~
- ~~d. — Licensed pharmacists, or up to three (3) trained individuals designated by the pharmacist by way of registered PDMP sub-accounts of the pharmacist to act on the pharmacist's behalf in accordance with 12-42.5-403(1.5)(b), (c) and (d), C.R.S., or a pharmacist licensed in another state, with statutory authority to dispense controlled substances to the extent the information requested relates specifically to a current patient to whom the pharmacist is dispensing or considering dispensing a controlled substance or prescription drug or a patient to whom the pharmacist is currently providing clinical patient care services;~~
- ~~e. — Practitioners engaged in a legitimate program to monitor a patient's controlled substance abuse;~~
- ~~f. — Medical examiners who are physicians licensed pursuant to Article 240 of Title 12, whose license is in good standing, and who is located and employed in the State of Colorado, or a coroner elected pursuant to section 30-10-601, C.R.S.;~~
- ~~g. — Law enforcement officials so long as the information released is specific to an individual patient, prescriber, or prescription drug outlet and part of a bona fide investigation and the request for information is accompanied by an official court order or subpoena. Such official court orders or subpoenas shall be submitted with the Board-provided form;~~
- a.hg. The individual who is the recipient of a controlled substance prescription so long as the information released is specific to such individual. The procedure for individuals to obtain such information is as follows:
 - 1. The individual shall submit a written, signed request to the Board on the Board-provided form;
 - 2. The individual shall provide valid photographic identification prior to obtaining the PDMP information;
 - 3. An individual submitting a request on behalf of another individual who is the recipient of a controlled substance prescription may only obtain PDMP information if the following documents are provided:
 - (A) The original document establishing medical durable power of attorney of the individual submitting the request as power of attorney for the individual who is the recipient of the controlled substance prescription, and
 - (B) Valid photographic identification of the individual submitting the request.
- ~~ih. — State regulatory boards within the Colorado Division of Professions and Occupations and the Director of the Colorado Division of Professions and Occupations so long as the~~

~~information released is specific to an individual prescriber and is part of a bona fide investigation and the request for information is accompanied by an official court order or subpoena. Such official court orders or subpoenas shall be submitted with the Board-provided form; and~~

~~ji. A resident physician with an active physician training license issued by the Colorado medical board pursuant to section 12-36-122 and under the supervision of a licensed physician to the extent the query relates to a current patient of the resident physician to whom the resident physician is prescribing or considering prescribing a controlled substance.~~

~~kj. The Department of Public Health and Environment for purposes of population-level analysis, but any use of the program data by the department is subject to the federal "Health Insurance Portability and Accountability Act of 1996 (HIPAA) and any rules promulgated pursuant to HIPAA, including the requirement to remove any identifying data unless exempted from the requirement.~~

b.lk. A person authorized to access the PDMP may knowingly release PDMP information specific to an individual or to the individual's treating providers in accordance with HIPAA, Pub.L. 104-191, as amended, and any rules promulgated pursuant to HIPAA without violating Part 4 of Title 12, Article 28042-5.

...

29.00.00 PHARMACY TECHNICIANS

Rule 29.00.30 Certification requirements.

a. An applicant for a provisional or non-provisional certification shall submit an application as provided by the Board and the prescribed fee.

b. An applicant for a non-provisional certification shall submit proof that the applicant is certified by a nationally recognized certification board or body. For the purpose of obtaining a Board-issued non-provisional certification to practice as a pharmacy technician, the Board defines a "nationally recognized certification board or body" for pharmacy technicians as those boards or bodies approved by the National Association of Boards of Pharmacy (NABP) or the National Commission of Certifying Agencies (NCCA).

c. Each applicant for a provisional or non-provisional certification shall:

(1) Provide proof satisfactory to the Board that the applicant submitted to a criminal history check as a condition of employment at a pharmacy or other outlet, as required by the applicant's current employer, as a condition of participating in a course of study for or with a certifying board or body, or in connection with obtaining certification from a certifying board or body; or

(2) Have his or her fingerprints taken by a local law enforcement agency or any third party approved by the Colorado bureau of investigation for the purpose of obtaining a fingerprint-based criminal history record check. If an approved third party takes the person's fingerprints, the fingerprints may be electronically captured using Colorado bureau of investigation-approved livescan equipment. Third-party vendors shall not keep the applicant information for more than thirty

days unless requested to do so by the applicant. The applicant shall submit payment by certified check or money order for the fingerprints and for the actual costs of the record check at the time the fingerprints are submitted to the Colorado bureau of investigation. Upon receipt of fingerprints and receipt of the payment for costs, the Colorado bureau of investigation shall conduct a state and national fingerprint-based criminal history record check utilizing records of the Colorado bureau of investigation and the federal bureau of investigation and shall forward the results of the criminal history record check to the Board.

DEPARTMENT OF LAW

Administrator – Uniform Consumer Credit Code

COLORADO STUDENT LOAN SERVICERS ACT RULES

4 CCR 902-3

Rule 1. Nonrefundable Initial and Annual Renewal License Fees for Student Loan Servicers

The amount of the initial license fee for a license commencing January 31, 2020 for a student loan servicer is \$12,500. The amount of the annual renewal fee is \$12,500. The amount of the initial license fee and the annual renewal fee may be reduced or increased periodically based upon the Administrator's determination of anticipated changes to the cost of administering the Student Loan Servicer Act.

Rule 2. Nonrefundable Investigation Fee

The investigation fee for a student loan servicer, applicant for licensure pursuant to 5-20-106(2), C.R.S. is \$500 and must be paid only at the time of and in conjunction with the initial license application.

Rule 3. Federal Contractor Exemption

A student loan servicer seeking licensure pursuant to section 5-20-106(1), C.R.S., shall document eligibility for the exemption by submitting at least one of the following documents:

- A. The signed signature page to a currently operative contract showing that the servicer is a party to a contract awarded by the United States Secretary of Education under section 20 1087f, U.S.C.; or
- B. Any other document that serves as the functional equivalent to (A), which will be judged in the Administrator's sole discretion.

COLORADO DEPARTMENT OF LAW
Administrator – Uniform Consumer Credit Code
Statement of Basis, Specific Statutory Authority, and Purpose

4 CCR 902-3

In the 2019 legislative session, the Colorado General Assembly passed the Colorado Student Loan Servicers Act, sections 5-20-101, *et seq.*, C.R.S. (“CSLSA”). The CSLSA requires student loan servicers to obtain a license from the Administrator of the Uniform Consumer Credit Code in the Department of Law. Section 5-20-110(5), C.R.S., provides that the Administrator shall adopt rules as necessary to implement the CSLSA. The specific statutory authority for these rules is contained in sections 5-20-106, 5-20-107, and 5-20-110(5), C.R.S.

Section 5-20-107, C.R.S., requires that the Administrator determine the amount of fees required and that a person applying for licensure must pay, as applicable, an initial license fee, an annual renewal license fee, and (for non-federal contractors) an investigative fee. Section 5-20-106(1)(a), C.R.S., requires that the Administrator prescribe the procedure to document eligibility for automatic licensure for federal student loan servicing contractors.

The Administrator must set the initial and annual renewal license fee at a level sufficient to cover the cost of administering the CSLSA. That cost is estimated to be approximately \$433,000 based on the addition of three full time employees to assist the Administrator in operating the CSLSA program and other operating expenses. Based on license applications received in other states that license student loan servicers and the scope of the CSLSA, the Administrator estimates that there will be approximately 35 applicants for student loan servicer licenses. Based on these figures, the nonrefundable initial and annual renewal license fee will be \$12,500 per applicant, which is an amount estimated to cover the costs of administering the CSLSA. To be specific, 35 estimated license application fees of \$12,500 each will amount to \$437,500 in revenue. The amount of the initial license fee and annual renewal fee may be reduced or increased periodically based upon the Administrator’s determination of anticipated changes to the cost of administering the Student Loan Servicer Act.

The Administrator must set an investigative fee to cover the varying time and expense of investigating each new student loan servicer license applicant that applies pursuant to 5-20-106(2), C.R.S. The Administrator estimates that such cost is \$500 per applicant based on similar application processes that the Administrator operates under other statutes.

A person seeking to act within the state as a student loan servicer is exempt from the application procedures described in 5-20-106(2), C.R.S., if the

Administrator determines the person is a party to a contract awarded by the United States Secretary of Education under section 20 1087f, U.S.C., as amended. To document eligibility for the exemption, the Administrator prescribes the following procedures: production of either (A) a signed signature page to a currently operative contract awarded by the United States Secretary of Education under section 20 1087f, U.S.C., or (B) any other document that serves as the functional equivalent to (A), which will be judged in the Administrator's sole discretion.

Water Quality Control Commission

Department of Public Health & Environment

NOTICE OF PUBLIC RULEMAKING HEARING BEFORE THE COLORADO WATER QUALITY CONTROL COMMISSION

SUBJECT:

For consideration of the adoption of hardness-based table value standards for Aquatic Life use based on the U.S. EPA's "Aquatic Life Ambient Water Quality Criteria - 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016; and revisions to address certain typographical errors to provide clarity in the following regulations:

- The Basic Standards and Methodologies for Surface Water, Regulation #31 (5 CCR 1002-31);
- Classifications and Numeric Standards for Arkansas River Basin, Regulation #32 (5 CCR 1002-32);
- Classifications and Numeric Standards for Upper Colorado River Basin and North Platte River, Regulation #33 (5 CCR 1002-33);
- Classifications and Numeric Standards for San Juan River and Dolores River Basins, Regulation #34 (5 CCR 1002-34);
- Classifications and Numeric Standards for Gunnison and Lower Dolores River Basins, Regulation #35 (5CCR 1002-35);
- Classifications and Numeric Standards for Rio Grande Basin, Regulation #36 (5 CCR 1002-36);
- Classifications and Numeric Standards for Lower Colorado River Basin, Regulation #37 (5 CCR 1002-37); and
- Classifications and Numeric Standards for South Platte River Basin, Laramie River Basin, Republican River Basin, Smoky Hill River Basin, Regulation #38 (5 CCR 1002-38).

Revisions proposed by the Water Quality Control Division, along with a proposed Statement of Basis, Specific Statutory Authority and Purpose, are attached to this notice as:

- Exhibit 1 - Regulation #31
- Exhibit 2 - Regulation #32
- Exhibit 3 - Regulation #33,
- Exhibit 4 - Regulation #34,
- Exhibit 5 - Regulation #35,
- Exhibit 6 - Regulation #36,
- Exhibit 7 - Regulation #37,
- Exhibit 8 - Regulation #38,

In these attachments, proposed new language is shown with double-underlining and proposed deletions are shown with ~~strikeouts~~. Any alternative proposals related to the subject of this hearing will also be considered.

SCHEDULE OF IMPORTANT DATES

Proponent's prehearing statement due	9/18/2019 5:00 pm	Additional information below.
Party status requests due	10/2/2019 5:00 pm	Additional information below.
Responsive prehearing statements due	10/16/2019 5:00 pm	Additional information below.
Rebuttal statements due	11/20/2019 5:00 pm	Additional information below.
Last date for submittal of motions	11/22/2019 by noon	Additional information below.
Notify commission office if participating in prehearing conference by phone	11/22/2019 by noon	Send email to cdphe.wgcc@state.co.us with participant(s) name(s)
Prehearing Conference (mandatory for parties)	11/25/2019 2:15 pm	Carson Conference Room Department of Public Health and Environment 4300 Cherry Creek Drive South Denver, CO 80246 Google Hangout: +1 475-441-4506 PIN: 479 724#
Rulemaking Hearing	12/9/2019 12:00 pm	Sabin Cleere Conference Room Department of Public Health and Environment 4300 Cherry Creek Drive South Denver, CO 80246

HEARING SUBMITTALS:

For this hearing, the commission will receive all submittals electronically. Submittals must be provided as PDF documents, except for raw data exhibits which may be provided as Excel workbooks. Submittals may be emailed to cdphe.wgcc@state.co.us, provided via an FTP site, CD or flash drive, or otherwise conveyed to the commission office so as to be received no later than the specified date.

PARTY STATUS:

Party status requests must be in writing and must provide:

- the organization's name,
- one contact person,
- a mailing address,
- a phone number, and
- email addresses of all individuals associated with the party who wish to be notified when new submittals are available on the commission's website for review.

In accordance with section 25-8-104(2)(d), C.R.S., any person who believes that the actions proposed in this notice have the potential to cause material injury to his or her water rights is requested to so indicate, along with an explanation of the alleged harm, in their party status request.

PREHEARING AND REBUTTAL STATEMENTS:

Each party must submit a prehearing statement: parties that have proposed revisions attached as exhibits to the notice must submit a proponent's prehearing statement. All other parties must submit a responsive prehearing statement. Proponents may also submit responsive prehearing statements when there are multiple proposals attached to the notice.

Each prehearing and rebuttal statement must be provided as a separate PDF document from any accompanying written testimony or exhibits.

Following the rebuttal statement due date, no other written materials will be accepted from parties except for good cause shown.

Oral testimony at the hearing should primarily summarize written material previously submitted. The hearing will emphasize commission questioning of parties and other interested persons about their written prehearing submittals. Introduction of written material at the hearing by those with party status will not be permitted unless authorized by the commission.

PREHEARING CONFERENCE:

Attendance at the prehearing conference is mandatory for all persons requesting party status. Parties needing to participate by telephone are encouraged to notify the commission office prior to the prehearing conference. Remote participants can call +1 475-441-4506 and enter the PIN 479 724#.

Following the cut-off date for motions, no motions will be accepted, except for good cause shown.

PUBLIC PARTICIPATION ENCOURAGED:

The commission encourages input from non-parties, either orally at the hearing or in writing prior to the hearing. Written submissions should be emailed to cdphe.wqcc@state.co.us by November 26, 2019.

SPECIFIC STATUTORY AUTHORITY:

The provisions of sections 25-8-202(1)(a), (b), and (2); 25-8-203; 25-8-204; and 25-8-402, C.R.S., provide the specific statutory authority for consideration of the regulatory amendments proposed by this notice. Should the commission adopt the regulatory language as proposed in this notice or alternative amendments, it will also adopt, in compliance with section 24-4-103(4) C.R.S., an appropriate Statement of Basis, Specific Statutory Authority, and Purpose.

Dated this 12th day of August, 2019 in Denver, Colorado.

Table III – Footnotes

- (1) Metals for aquatic life use are stated as dissolved unless otherwise specified.

Where the hardness-based equations in Table III are applied as table value water quality standards for individual water segments, those equations define the applicable numerical standards. As an aid to persons using this regulation, Table IV provides illustrative examples of approximate metals values associated with a range of hardness levels. This table is provided for informational purposes only.

- (2) Metals for agricultural and domestic uses are stated as total recoverable unless otherwise specified.

- (3) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/l. The exception is for aluminum, where the upper cap on calculations is a hardness of 220 mg/l. For permit effluent limit calculations, the hardness values used in calculating the appropriate metal standard should be based on the lower 95 percent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site specific data. Where insufficient site specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not possible, a site specific method should be used, e.g., where hardness data exists without paired flow data, the mean of the hardness during the low flow season established in the permit shall be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist. For determination of standards attainment, where paired metal/hardness data is available, attainment will be determined for individual sampling events. Where paired data is not available, the mean hardness will be used.

- (4) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.

- (5) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of hexavalent and trivalent chromium exceed the water supply standard of 50 µg/l chromium in those waters classified for domestic water use.

- (6) FRV means Final Residue Value and should be expressed as "Total" because many forms of mercury are readily converted to toxic forms under natural conditions. The FRV value of 0.01 µg/liter is the maximum allowed concentration of total mercury in the water. This value is estimated to prevent bioaccumulation of methylmercury in edible fish or shellfish tissue above the fish tissue standard for methylmercury of 0.3 mg/kg.

In waters supporting populations of fish or shellfish with a potential for human consumption, the Commission can adopt the FRV as the stream standard to be applied as a 30 day average. Alternatively, the Commission can adopt site specific ambient based standards for mercury in accordance with section 31.7(1)(b)(ii) and (iii). Site-specific water-column standards shall be calculated from the site-specific bioaccumulation factor, using measured water column concentrations of total mercury and measured fish tissue concentrations of methylmercury. Fish tissue data shall be collected from species of the highest trophic level present in the water body. Fish tissue samples should include older, larger individuals present in the water body. A bioaccumulation factor should be calculated separately for each species sampled, and the highest bioaccumulation factor should be used to calculate the site-specific water column standard in order to prevent the average fish tissue concentrations from exceeding 0.3 mg/kg for all species.

- (7) Applicable to all Class 1 aquatic life segments which also have a water supply classification or Class 2 aquatic life segments which also have a water supply classification designated by the Commission after rulemaking hearing. These Class 2 segments will generally be those where fish of a catchable size and which are normally consumed are present, and where there is evidence that fishing takes place on a recurring basis. The Commission may also consider additional evidence that may be relevant to a determination whether the conditions applicable to a particular segment are similar enough to the assumptions underlying the water plus fish ingestion criteria to warrant the adoption of water plus fish ingestion standards for the segment in question.
- (8) The use of 0.1 micron pore size filtration for determining dissolved iron is allowed as an option in assessing compliance with the drinking water standard.
- (9) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.
- (10) Applicable to the following segments which do not have a water supply classification: all Class 1 aquatic life segments or Class 2 aquatic life segments designated by the Commission after rulemaking hearing. These class 2 segments will generally be those where fish of a catchable size and which are normally consumed are present, and where there is evidence that fishing takes place on a recurring basis. The Commission may also consider additional evidence that may be relevant to a determination whether the conditions applicable to a particular segment are similar enough to the assumptions underlying the fish ingestion criteria to warrant the adoption of fish ingestion standards for the segment in question.
- (11) Where the pH is equal to or greater than 7.0 in the receiving water after mixing, the chronic hardness-dependent equation will apply. Where pH is less than 7.0 in the receiving water after mixing, either the 87 µg/l chronic total recoverable aluminum criterion or the criterion resulting from the chronic hardness-dependent equation will apply, whichever is more stringent.
- (12) This standard is only appropriate where irrigation water is applied to soils with pH values lower than 6.0.
- (13) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (14) The chronic zinc equation for sculpin applies in areas where mottled sculpin are expected to occur and hardness is less than 102 ppm CaCO₃. The regular chronic zinc equation applies in areas where mottled sculpin are expected to occur, but the hardness is greater than 102 ppm CaCO₃.

- (15) In determining whether adoption of a molybdenum standard is appropriate for a segment, the Commission will consider whether livestock or irrigated forage is present or expected to be present. The table value assumes that copper and molybdenum concentrations in forage are 7 mg/kg and 0.5 mg/kg respectively, forage intake is 6.8 kg/day, copper concentration in water is 0.008 mg/l, water intake is 54.6 l/day, copper supplementation is 48 mg/day, and that a Cu:Mo ratio of 4:1 is appropriate with a 0.075 mg/l molybdenum margin of safety. Numeric standards different than the table-value may be adopted on a site-specific basis where appropriate justification is presented to the Commission. In evaluating site-specific standards, the relevant factors that should be considered include the presence of livestock or irrigated forage, and the total intake of copper, molybdenum, and sulfur from all sources (i.e., food, water, and dietary supplements). In general, site-specific standards should be based on achieving a safe copper:molybdenum total exposure ratio, with due consideration given to the sulfur exposure. A higher Cu:Mo ratio may be necessary where livestock exposure to sulfur is also high. Species specific information shall be considered where cattle are not the most sensitive species.
- (16) When applying the table value standards for uranium to individual segments, the Commission shall consider the need to maintain radioactive materials at the lowest practical level as required by Section 31.11(2) of the Basic Standards regulation.
- (17) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.

31.57 STATEMENT OF BASIS SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION JANUARY 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The commission also adopted, in compliance with 24-4-103(4) C.R.S., the following statement of basis and purpose.

BASIS AND PURPOSE

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

REGULATION NO. 32 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR ARKANSAS RIVER BASIN

5 CCR 1002-32

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

32.6 TABLES

(3) Table Value Standards

In certain instances in the tables in Appendix 32-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS
(Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (T)	<p>Acute = $e^{(1.3695[\ln(\text{hardness})]+1.8308)}$ pH equal to or greater than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ pH less than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ or 87, whichever is more stringent</p>
Ammonia ⁽⁴⁾	<p>Cold Water = (mg/l as N) Total</p> $acute = \frac{0.275}{1 + 10^{7.204 - pH}} + \frac{39.0}{1 + 10^{pH - 7.204}}$ $chronic = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN(2.85, 1.45 * 10^{0.028(25 - T)})$ <p>Warm Water = (mg/l as N) Total</p> $acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$ $chronic (Apr 1 - Aug 31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN(2.85, 1.45 * 10^{0.028(25 - T)})$ $chronic (Sep 1 - Mar 31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * 1.45 * 10^{0.028(25 - MAX(T, 7))}$

Cadmium	$\text{Acute(warm)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.443)}$ $\text{Acute(cold)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.866)}$ $\text{Chronic} = (1.101672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.7977 * \ln(\text{hardness}) - 3.909)}$ $\text{Acute} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151[\ln(\text{hardness})] - 3.1485}$ $\text{Acute(Trout)} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151[\ln(\text{hardness})] - 3.6236}$ $\text{Chronic} = (1.101672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.7998[\ln(\text{hardness})] - 4.4451}$					
Chromium III ⁽⁵⁶⁾	$\text{Acute} = e^{(0.819[\ln(\text{hardness})] + 2.5736)}$ $\text{Chronic} = e^{(0.819[\ln(\text{hardness})] + 0.5340)}$

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In

warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the commission on a site-specific basis where appropriate evidence is submitted.

(5) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.

(56) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 µg/l total chromium in those waters classified for domestic water use.

(67) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.

(78) Lake trout-based summer temperature criteria [16.6 (ch), 22.4 (ac)] apply where appropriate and necessary to protect lake trout from thermal impacts.

32.64 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION January 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

A. Aquatic Life Standards for Cadmium

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

During the 2018 basin review, the commission adopted EPA's 2016 recommended criteria as site-specific standards in select cold water segments. The updated table value standards for cold waters are the same as EPA's 2016 recommended criteria. Therefore, to reflect the commission's state-wide adoption of the updated table value standards, the cadmium "SSE" were replaced with "TVS" on the following segments:

Upper Arkansas River: 1a, 2b (acute only), 2c (acute only), 3, 4a, 5a, 5b, 7, 11, 12a

B. Clarifications to Appendix 32-1

To improve the clarity and usability of the tables, an acronym list was added to the front of Appendix 32-1 and the footnote referencing Section 32.6 was also simplified.

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS – FOOTNOTES

- (A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (B) *Reserved.*
- (C) *Reserved.*

Exhibit 3
Water Quality Control Division
Regulation #33

DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT

Water Quality Control Commission

REGULATION NO. 33 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR UPPER COLORADO RIVER BASIN AND NORTH PLATTE RIVER (PLANNING REGION 12)

5 CCR 1002-33

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

33.6 TABLES

(3) Table Value Standards

In certain instances in the tables in Appendix 33-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS
(Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (Trec)	<p>Acute = $e^{(1.3695[\ln(\text{hardness})]+1.8308)}$</p> <p>pH equal to or greater than 7.0</p> <p>Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$</p> <p>pH less than 7.0</p> <p>Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ or 87, whichever is more stringent</p>

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 percent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the Commission on a site-specific basis where appropriate evidence is submitted.
- (5) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.
- (56) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 µg/l total chromium in those waters classified for domestic water use.
- (67) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.

- (78) Mountain whitefish-based summer temperature criteria [16.9 (ch), 21.2 (ac)] apply when and where spawning and sensitive early life stages of this species are known to occur.
- (89) Lake trout-based summer temperature criteria [16.6 (ch), 22.4 (ac)] apply where appropriate and necessary to protect lake trout from thermal impacts.

33.64 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION JANUARY 13, 2019 EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

During the 2019 basin review, the commission adopted EPA's 2016 recommended criteria as site-specific standards in select cold water segments. The updated table value standards for cold waters are the same

as EPA's 2016 recommended criteria. Therefore, to reflect the commission's state-wide adoption of the updated table value standards, the cadmium "SSE" were replaced with "TVS" on the following segments:

Blue River: 2c, 4a, 6a, 7, 12

Eagle River: 2, 5a (acute), 5c (acute), 6

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS – FOOTNOTES

- (A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (B) Assessment of adequate refuge shall rely on the Cold Large Lake table value temperature criterion and applicable dissolved oxygen standard rather than the site-specific temperature standard.

REGULATION NO. 34 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR SAN JUAN RIVER AND DOLORES RIVER BASINS

5 CCR 1002-34

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

34.6 TABLES

(3) Table Value Standards

In certain instances in the tables in Appendix 34-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS
(Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (T)	<p>Acute = $e^{(1.3695[\ln(\text{hardness})]+1.8308)}$</p> <p>pH equal to or greater than 7.0</p> <p>Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$</p> <p>pH less than 7.0</p> <p>Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ or 87, whichever is less</p>
Ammonia ⁽⁴⁾	<p>Cold Water = (mg/l as N) Total</p> $acute = \frac{0.275}{1 + 10^{7.204 - pH}} + \frac{39.0}{1 + 10^{pH - 7.204}}$ $chronic = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN \left(2.85, 1.45 * 10^{0.028(25 - T)} \right)$ <p>Warm Water = (mg/l as N) Total</p> $acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$ $chronic (Apr1 - Aug31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN \left(2.85, 1.45 * 10^{0.028(25 - T)} \right)$ $chronic (Sep1 - Mar31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * 1.45 * 10^{0.028(25 - MAX(T, 7))}$

Cadmium	$\text{Acute(warm)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 \ln(\text{hardness}) - 3.443)}$ $\text{Acute(cold)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 \ln(\text{hardness}) - 3.866)}$ $\text{Chronic} = (1.101672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.7977 \ln(\text{hardness}) - 3.909)}$ $\text{Acute} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151 [\ln(\text{hardness})] - 3.1485}$ $\text{Acute(Trout)} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151 [\ln(\text{hardness})] - 3.6236}$ $\text{Chronic} = (1.101672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.7998 [\ln(\text{hardness})] - 4.4451}$					
Chromium III ⁽⁵⁶⁾	$\text{Acute} = e^{(0.819 [\ln(\text{hardness})] + 2.5736)}$ $\text{Chronic} = e^{(0.819 [\ln(\text{hardness})] + 0.5340)}$					
Chromium VI ⁽⁵⁶⁾	$\text{Acute} = 16$ $\text{Chronic} = 11$

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/L as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the commission on a site-specific basis where appropriate evidence is submitted.
- (5) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.
- (56) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the

water supply standard of 50 µg/l total chromium in those waters classified for domestic water use.

- (67) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.

34.51 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION JANUARY 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

A. Aquatic Life Standards for Cadmium

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

During the 2017 basin review, the commission adopted EPA's 2016 recommended criteria as site-specific standards in select cold water segments. The updated table value standards for cold waters are the same as EPA's 2016 recommended criteria. Therefore, to reflect the commission's state-wide adoption of the updated table value standards, the cadmium "SSE" were replaced with "TVS" on the following segments:

Animas Florida: 3a, 3c, 4a, 4b, 6 and 9

Dolores River: 9

B. Clarifications to Appendix 34-1

To improve the clarity and usability of the tables, an acronym list was added to the front of Appendix 34-1 and the footnote referencing Section 34.6 was also simplified.

REGULATION #34 STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS

Dolores River Basin

15. All lakes and reservoirs which are tributary to the Dolores River from a point immediately below the confluence of the West Dolores River, to the bridge at Bradfield Ranch (Forest Route 505, near Montezuma/Dolores County Line), except for the specific listing in Segment 4b. This segment includes Campbell Reservoir, Summers Reservoir, Red Lake, and Long Draw Reservoir.

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS – FOOTNOTES

- (A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (B) Assessment of adequate refuge shall rely on the Cold Large Lake table value temperature criterion and applicable dissolved oxygen standard rather than the site-specific temperature standard.
- (C) For certain site-specific temperature standards, the temperature excursions listed in Table I - Footnote 5(c) of 31.16 do not apply. Assessment of ambient-based temperature standards should be conducted in a way that represents similar conditions to those under which the criteria were developed (i.e., air, low flow, and warming event excursions should not apply). Similarly, where site-specific adjustments to the winter shoulder season have been adopted, the winter shoulder season excursion does not apply.

35.6 TABLES

(3) Table Value Standards

In certain instances in the tables in Appendix 35-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS
(Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (T)	<p>Acute = $e^{(1.3695[\ln(\text{hardness})]+1.8308)}$ pH equal to or greater than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ pH less than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ or 87, whichever is less</p>
Ammonia ⁽⁴⁾	<p>Cold Water = (mg/l as N) Total</p> $acute = \frac{0.275}{1 + 10^{7.204 - pH}} + \frac{39.0}{1 + 10^{pH - 7.204}}$ $chronic = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN(2.85, 1.45 * 10^{0.028(25 - T)})$ <p>Warm Water = (mg/l as N) Total</p> $acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$ $chronic (Apr1 - Aug31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN(2.85, 1.45 * 10^{0.028(25 - T)})$ $chronic (Sep1 - Mar31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * 1.45 * 10^{0.028(25 - MAX(T, 7))}$

Cadmium	 $\text{Acute(warm)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.443)}$ $\text{Acute(cold)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.866)}$ $\text{Chronic} = (1.101672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.7977 * \ln(\text{hardness}) - 3.909)}$ $\text{Acute} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151[\ln(\text{hardness})] - 3.1485}$ $\text{Acute(Trout)} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151[\ln(\text{hardness})] - 3.6236}$ $\text{Chronic} = (1.101672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.7998[\ln(\text{hardness})] - 4.4451}$ 					
Chromium III ⁽⁶⁶⁾	$\text{Acute} = e^{(0.819[\ln(\text{hardness})] + 2.5736)}$ $\text{Chronic} = e^{(0.819[\ln(\text{hardness})] + 0.5340)}$					
Chromium VI ⁽⁶⁶⁾	$\text{Acute} = 16$ $\text{Chronic} = 11$					
Copper	$\text{Acute} = e^{(0.9422[\ln(\text{hardness})] - 1.7408)}$ $\text{Chronic} = e^{(0.8545[\ln(\text{hardness})] - 1.7428)}$					
Lead	$\text{Acute} = (1.46203 - [(\ln(\text{hardness}) * (0.145712))] * e^{(1.273[\ln(\text{hardness})] - 1.46)}$ $\text{Chronic} = (1.46203 - [(\ln(\text{hardness}) * (0.145712))] * e^{(1.273[\ln(\text{hardness})] - 4.705)}$					
Manganese	$\text{Acute} = e^{(0.3331[\ln(\text{hardness})] + 6.4676)}$ $\text{Chronic} = e^{(0.3331[\ln(\text{hardness})] + 5.8743)}$					
Nickel	$\text{Acute} = e^{(0.846[\ln(\text{hardness})] + 2.253)}$ $\text{Chronic} = e^{(0.846[\ln(\text{hardness})] + 0.0554)}$					
Selenium ⁽⁶⁷⁾	$\text{Acute} = 18.4$ $\text{Chronic} = 4.6$					
Silver	$\text{Acute} = \frac{1}{2}e^{(1.72[\ln(\text{hardness})] - 6.52)}$ $\text{Chronic} = e^{(1.72[\ln(\text{hardness})] - 9.06)}$ $\text{Chronic(Trout)} = e^{(1.72[\ln(\text{hardness})] - 10.51)}$

				Jan. – March	13.1	24.1
Uranium	Acute = $e^{(1.1021[\ln(\text{hardness})]+2.7088)}$ Chronic = $e^{(1.1021[\ln(\text{hardness})]+2.2382)}$					
Zinc	Acute = $0.978 * e^{(0.9094[\ln(\text{hardness})]+0.9095)}$ Chronic = $0.986 * e^{(0.9094[\ln(\text{hardness})]+0.6235)}$ Where hardness is less than 102 mg/L CaCO ³ and mottled sculpin are expected to be present: Chronic (sculpin) = $e^{(2.140[\ln(\text{hardness})]-5.084)}$					

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/L as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the commission on a site-specific basis where appropriate evidence is submitted.
- (5) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.
- (56) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case

can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 µg/l total chromium in those waters classified for domestic water use.

- (67) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.
- (78) Lake trout-based summer temperature criteria [16.6 (ch), 22.4 (ac)] apply where appropriate and necessary to protect lake trout from thermal impacts.

35.48 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION JANUARY 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

A. Aquatic Life Standards for Cadmium

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive

cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

During the 2017 basin review, the commission adopted EPA's 2016 recommended criteria as site-specific standards in select cold water segments. The updated table value standards for cold waters are the same as EPA's 2016 recommended criteria. Therefore, to reflect the commission's state-wide adoption of the updated table value standards, the cadmium "SSE" were replaced with "TVS" on the following segments:

Upper Gunnison River: 7, 10a, 10b, 11, 12, 29a, 30, 31

North Fork of the Gunnison River: 4c

Uncompahgre River: 2, 3a, 3b, 3c, 3d, 3e, 3f, 5, 8, 9

San Miguel River: 2, 3a, 3b, 6a, 6b

B. Clarifications to Appendix 35-1

To improve the clarity and usability of the tables, an acronym list was added to the front of Appendix 35-1 and the footnote referencing Section 35.6 was also simplified.

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS – FOOTNOTES

- (A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (B) Reserved.
- (C) For certain site-specific temperature standards, the temperature excursions listed in Table I - Footnote 5(c) of 31.16 do not apply. Assessment of ambient-based temperature standards should be conducted in a way that represents similar conditions to those under which the criteria were developed (i.e., air, low flow, and warming event excursions should not apply). Similarly, where site-specific adjustments to the winter shoulder season have been adopted, the winter shoulder season excursion does not apply.

REGULATION NO. 36 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR RIO GRANDE BASIN

5 CCR 1002-36

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

36.6 TABLES

(3) Table Value Standards

In certain instances in the tables in Appendix 36-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS
(Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (T)	<p>Acute = $e^{(1.3695[\ln(\text{hardness})]+1.8308)}$ pH equal to or greater than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ pH less than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ or 87, whichever is more stringent</p>
Ammonia ⁽⁴⁾	<p>Cold Water = (mg/l as N) Total</p> $acute = \frac{0.275}{1 + 10^{7.204 - pH}} + \frac{39.0}{1 + 10^{pH - 7.204}}$ $chronic = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN(2.85, 1.45 * 10^{0.028(25 - T)})$ <p>Warm Water = (mg/l as N) Total</p> $acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$ $chronic (Apr 1 - Aug 31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN(2.85, 1.45 * 10^{0.028(25 - T)})$ $chronic (Sep 1 - Mar 31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * 1.45 * 10^{0.028(25 - MAX(T, 7))}$
Cadmium	<p>Acute(warm)⁽⁵⁾ = $(1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.443)}$ Acute(cold)⁽⁵⁾ = $(1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.866)}$ Chronic = $(1.101672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.7977 * \ln(\text{hardness}) - 3.909)}$ Acute = $(1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151[\ln(\text{hardness})] - 3.1485}$</p>

	$\text{Acute(Trout)} = (1.136672 - [\ln(\text{hardness}) \times (0.041838)]) \times e^{0.9151[\ln(\text{hardness})] - 3.6236}$ $\text{Chronic} = (1.101672 - [\ln(\text{hardness}) \times (0.041838)]) \times e^{0.7998[\ln(\text{hardness})] - 4.4451}$					
Chromium III ⁽⁵⁶⁾	Acute = $e^{(0.819[\ln(\text{hardness})] + 2.5736)}$ Chronic = $e^{(0.819[\ln(\text{hardness})] + 0.5340)}$					
Chromium VI ⁽⁵⁶⁾	Acute = 16 Chronic = 11					
Copper	Acute = $e^{(0.9422[\ln(\text{hardness})] - 1.7408)}$ Chronic = $e^{(0.8545[\ln(\text{hardness})] - 1.7428)}$					
Lead	Acute = $(1.46203 - [\ln(\text{hardness}) \times (0.145712)]) \times e^{(1.273[\ln(\text{hardness})] - 1.46)}$ Chronic = $(1.46203 - [\ln(\text{hardness}) \times (0.145712)]) \times e^{(1.273[\ln(\text{hardness})] - 4.705)}$					
Manganese	Acute = $e^{(0.3331[\ln(\text{hardness})] + 6.4676)}$ Chronic = $e^{(0.3331[\ln(\text{hardness})] + 5.8743)}$					
Nickel	Acute = $e^{(0.846[\ln(\text{hardness})] + 2.253)}$ Chronic = $e^{(0.846[\ln(\text{hardness})] + 0.0554)}$					
Selenium ⁽⁶⁷⁾	Acute = 18.4 Chronic = 4.6					
Silver	Acute = $\frac{1}{2}e^{(1.72[\ln(\text{hardness})] - 6.52)}$ Chronic = $e^{(1.72[\ln(\text{hardness})] - 9.06)}$ Chronic(Trout) = $e^{(1.72[\ln(\text{hardness})] - 10.51)}$

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L, except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the commission on a site-specific basis where appropriate evidence is submitted.
- (5) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.
- (56) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of hexavalent and trivalent chromium exceed the water supply standard of 50 µg/l total chromium in those waters classified for domestic water use.

(67) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.

36.45 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION JANUARY 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

A. Aquatic Life Standards for Cadmium

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

During the 2018 basin review, the commission adopted EPA's 2016 recommended criteria as site-specific standards in select cold water segments. The updated table value standards for cold waters are the same as EPA's 2016 recommended criteria. Therefore, to reflect the commission's state-wide adoption of the updated table value standards, the cadmium "SSE" were replaced with "TVS" on the following segments:

Rio Grande: 4b, 5a, 6

Alamosa River/La Jara Creek/Conejos River: 3a, 3c, 20

Closed Basin – San Luis Valley River Basin: 8, 12a

B. Clarifications to Appendix 36-1

To improve the clarity and usability of the tables, an acronym list was added to the front of Appendix 36-1 and the footnote referencing Section 36.6 was also simplified.

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS – FOOTNOTES

- (A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (B) Reserved.
- (C) For certain site-specific temperature standards, the temperature excursions listed in Table I - Footnote 5(c) of 31.16 do not apply. Assessment of ambient-based temperature standards should be conducted in a way that represents similar conditions to those under which the criteria were developed (i.e., air, low flow, and warming event excursions should not apply). Similarly, where site-specific adjustments to the winter shoulder season have been adopted, the winter shoulder season excursion does not apply.

REGULATION NO. 37 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR LOWER COLORADO RIVER BASIN

5 CCR 1002-37

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

37.6 TABLES

(3) Table Value Standards

In certain instances in the tables in Appendix 37-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS
(Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (Trec)	<p>Acute = $e^{(1.3695[\ln(\text{hardness})]+1.8308)}$ pH equal to or greater than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ pH less than 7.0 Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ or 87, whichever is more stringent</p>
Ammonia ⁽⁴⁾	<p>Cold Water = (mg/l as N)Total</p> $acute = \frac{0.275}{1 + 10^{7.204 - pH}} + \frac{39.0}{1 + 10^{pH - 7.204}}$ $chronic = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN \left(2.85, 1.45 * 10^{0.028(25 - T)} \right)$
	<p>Warm Water = (mg/l as N)Total</p> $acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$
	$chronic \text{ (Apr 1 - Aug 31)} = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN \left(2.85, 1.45 * 10^{0.028(25 - T)} \right)$ $chronic \text{ (Sep 1 - Mar 31)} = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * 1.45 * 10^{0.028 * (25 - MAX(T, 7))}$

Cadmium	$\text{Acute(warm)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.443)}$ $\text{Acute(cold)}^{(5)} = (1.136672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.9789 * \ln(\text{hardness}) - 3.866)}$ $\text{Chronic} = (1.101672 - (\ln(\text{hardness}) * 0.041838)) * e^{(0.7977 * \ln(\text{hardness}) - 3.909)}$ $\text{Acute} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151[\ln(\text{hardness})] - 3.1485}$ $\text{Acute(Trout)} = (1.136672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.9151[\ln(\text{hardness})] - 3.6236}$ $\text{Chronic} = (1.101672 - [\ln(\text{hardness}) * (0.041838)]) * e^{0.7998[\ln(\text{hardness})] - 4.4451}$					
Chromium III ⁽⁵⁶⁾	Acute = $e^{(0.819[\ln(\text{hardness})] + 2.5736)}$ Chronic = $e^{(0.819[\ln(\text{hardness})] + 0.5340)}$					
Chromium VI ⁽⁵⁶⁾	Acute = 16 Chronic = 11					
Copper	Acute = $e^{(0.9422[\ln(\text{hardness})] - 1.7408)}$ Chronic = $e^{(0.8545[\ln(\text{hardness})] - 1.7428)}$					
Lead	Acute = $(1.46203 - [\ln(\text{hardness}) * (0.145712)]) * e^{(1.273[\ln(\text{hardness})] - 1.46)}$ Chronic = $(1.46203 - [\ln(\text{hardness}) * (0.145712)]) * e^{(1.273[\ln(\text{hardness})] - 4.705)}$					
Manganese	Acute = $e^{(0.3331[\ln(\text{hardness})] + 6.4676)}$ Chronic = $e^{(0.3331[\ln(\text{hardness})] + 5.8743)}$					
Nickel	Acute = $e^{(0.846[\ln(\text{hardness})] + 2.253)}$ Chronic = $e^{(0.846[\ln(\text{hardness})] + 0.0554)}$					
Selenium ⁽⁶⁷⁾	Acute = 18.4 Chronic = 4.6					
Silver	Acute = $\frac{1}{2}e^{(1.72[\ln(\text{hardness})] - 6.52)}$ Chronic = $e^{(1.72[\ln(\text{hardness})] - 9.06)}$ Chronic(Trout) = $e^{(1.72[\ln(\text{hardness})] - 10.51)}$					
Temperature	TEMPERATURE TIER	TIER CODE	SPECIES EXPECTED TO BE PRESENT	APPLICABLE MONTHS	TEMPERATURE STANDARD (°C)

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the Commission on a site-specific basis where appropriate evidence is submitted.
- (5) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.
- (56) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 µg/l total chromium in those waters classified for domestic water use.
- (67) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.
- (78) Mountain whitefish-based summer temperature criteria [16.9 (ch), 21.2 (ac)] apply when and where spawning and sensitive early life stages of this species are known to occur.

37.42 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION JANUARY 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The Commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

During the 2019 basin review, the commission adopted EPA's 2016 recommended criteria as site-specific standards in select cold water segments. The updated table value standards for cold waters are the same as EPA's 2016 recommended criteria. Therefore, to reflect the commission's state-wide adoption of the updated table value standards, the cadmium "SSE" were replaced with "TVS" on the following segments:

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS – FOOTNOTES

- (A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (B) Assessment of adequate refuge shall rely on the Cold Large Lake table value temperature criterion and applicable dissolved oxygen standard rather than the site-specific temperature standard.

Exhibit 8
Water Quality Control Division
Regulation #38

DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT

Water Quality Control Commission

REGULATION NO. 38 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR SOUTH PLATTE RIVER BASIN, LARAMIE RIVER BASIN, REPUBLICAN RIVER BASIN, SMOKY HILL RIVER BASIN

5 CCR 1002-38

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

38.6 TABLES

(3) Table Value Standards

In certain instances in the tables in Appendix 38-1, the designation "TVS" is used to indicate that for a particular parameter a "table value standard" has been adopted. This designation refers to numerical criteria set forth in the Basic Standards and Methodologies for Surface Water. The criteria for which the TVS are applicable are on the following table.

TABLE VALUE STANDARDS
(Concentrations in µg/l unless noted)

PARAMETER ⁽¹⁾	TABLE VALUE STANDARDS ⁽²⁾⁽³⁾
Aluminum (T)	<p>Acute = $e^{(1.3695[\ln(\text{hardness})]+1.8308)}$</p> <p>pH equal to or greater than 7.0</p> <p>Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$</p> <p>pH less than 7.0</p> <p>Chronic = $e^{(1.3695[\ln(\text{hardness})]-0.1158)}$ or 87, whichever is more stringent</p>

TABLE VALUE STANDARDS - FOOTNOTES

- (1) Metals are stated as dissolved unless otherwise specified.
- (2) Hardness values to be used in equations are in mg/l as calcium carbonate and shall be no greater than 400 mg/L except for aluminum for which hardness shall be no greater than 220 mg/L. The hardness values used in calculating the appropriate metal standard should be based on the lower 95 per cent confidence limit of the mean hardness value at the periodic low flow criteria as determined from a regression analysis of site-specific data. Where insufficient site-specific data exists to define the mean hardness value at the periodic low flow criteria, representative regional data shall be used to perform the regression analysis. Where a regression analysis is not appropriate, a site-specific method should be used. In calculating a hardness value, regression analyses should not be extrapolated past the point that data exist.
- (3) Both acute and chronic numbers adopted as stream standards are levels not to be exceeded more than once every three years on the average.
- (4) For acute conditions the default assumption is that salmonids could be present in cold water segments and should be protected, and that salmonids do not need to be protected in warm water segments. For chronic conditions, the default assumptions are that early life stages could be present all year in cold water segments and should be protected. In warm water segments the default assumption is that early life stages are present and should be protected only from April 1 through August 31. These assumptions can be modified by the Commission on a site-specific basis where appropriate evidence is submitted.
- (5) The acute(warm) cadmium equation applies to segments classified as Aquatic Life Warm Class 1 or 2. The acute(cold) cadmium equation applies to segments classified as Aquatic Life Cold Class 1 or 2.
- (56) Unless the stability of the chromium valence state in receiving waters can be clearly demonstrated, the standard for chromium should be in terms of chromium VI. In no case can the sum of the instream levels of Hexavalent and Trivalent Chromium exceed the water supply standard of 50 µg/l total chromium in those waters classified for domestic water use.
- (67) Selenium is a bioaccumulative metal and subject to a range of toxicity values depending upon numerous site-specific variables.
- (78) E.coli criteria and resulting standards for individual water segments, are established as indicators of the potential presence of pathogenic organisms. Standards for E. coli are expressed as a two-month geometric mean. Site-specific or seasonal standards are also two-month geometric means unless otherwise specified.
- (89) All phosphorus standards are based upon the concentration of total phosphorus.
- (910) The pH standards of 6.5 (or 5.0) and 9.0 are an instantaneous minimum and maximum, respectively to be applied as effluent limits. In determining instream attainment of water quality

standards for pH, appropriate averaging periods may be applied, provided that beneficial uses will be fully protected.

38.100 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION JANUARY 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

A. Aquatic Life Standards for Cadmium

Cadmium is a naturally-occurring element frequently found alongside other metals, and numerous treatment techniques are available to remove cadmium from wastewater. Cadmium has both acute and chronic effects on aquatic life, and can negatively impact survival, growth, reproduction, immune and endocrine systems, development, and behavior.

The commission revised the hardness-based cadmium table value standards to protect the Aquatic Life use. The updated standards incorporate toxicity data that have become available since the cadmium standards were last updated in the 2005 Regulation No. 31 rulemaking hearing. The updated standards are based on the United States Environmental Protection Agency's (EPA) "Aquatic Life Ambient Water Quality Criteria – 2016" and toxicity data that have become available since EPA's recommended criteria were released in 2016.

The updated standards include two acute equations (acute(cold) and acute(warm)) and one chronic equation. The acute(cold) and chronic equations are the same as the acute and chronic criteria recommended by EPA in 2016. The acute(cold) equation, which is lowered to protect trout, is protective of trout and other sensitive cold water species and applies in segments classified as Aquatic Life Cold Class 1 or 2. The acute(warm) equation, which is not lowered to protect trout, is protective of warm water species and applies in segments classified as Aquatic Life Warm Class 1 or 2. The chronic equation is protective of both cold and warm water aquatic life and applies in segments classified as either Aquatic Life Cold Class 1 or 2 or Aquatic Life Warm Class 1 or 2.

Compared to the previous cadmium table value standards, the updated standards are generally less stringent. The acute(cold) standard is less stringent than the previous acute(trout) standard when water hardness is greater than 45 mg/L CaCO₃. The acute(warm) equation is less stringent than the previous acute standard when water hardness is greater than 101 mg/L CaCO₃. The updated chronic equation is less stringent than the previous chronic standard at all water hardness values.

In the past, Colorado has had separate acute equations for waters with trout and waters without trout. The updated standards include separate acute equations for cold waters (both with and without trout) and warm waters. This change in approach is due to the addition of toxicity data showing that sculpin, which inhabit cold waters, are also sensitive to cadmium. To ensure protection of sculpin and other sensitive cold water aquatic life in waters where trout are absent, the acute(cold) equation applies to all cold waters. As a result, the acute trout (tr) qualifier for cadmium is no longer needed on select cold water segments and was deleted from all segments where it had applied.

B. Clarifications to Appendix 38-1

To improve the clarity and usability of the tables, an acronym list was added to the front of Appendix 38-1 and the footnote referencing Section 38.6 was also simplified.

UPPER SOUTH PLATTE RIVER SEGMENT 15

Site-Specific Minimum Dissolved Oxygen and Ammonia Standards

UNDERLYING STANDARDS

Dissolved Oxygen

Early Life Stage Protection Period (April 1 through July 31)

1-Day^{1,5,6} 3.0 mg/L (acute)

7-Day Average^{1,2,4} 5.0 mg/L

Older Life Stage Protection Period (August 1 through March 31)

1-Day^{1,5} 2.0 mg/L (acute)

7-Day Mean of Minimums^{1,3} 2.5 mg/L

30-Day Average^{1,2} 4.5 mg/L

TEMPORARY MODIFICATION

During the period until October 31, 2001, the Segment 15 dissolved oxygen standards from 88th Avenue north to the end of the Segment shall be the currently existing ambient conditions as monitored in 1992, 1993, and 1994 by the Division and by the Metro District. Beginning November 1, 2001, the standards shall apply to all sections of Segment 15 south of the Brighton Ditch diversion. The standards north of the Brighton Ditch diversion shall continue to be the ambient conditions existing in 1992, 1993, and 1994. Beginning November 1, 2004, the standards shall apply to all sections of Segment 15.

Refer to Section 38(6)(4)(c) for Dissolved Oxygen assessment locations.

Footnotes

1. For the purposes of determining compliance with the standards, dissolved oxygen measurements shall only be taken in the flowing portion of the stream at mid-depth, and at least six inches above the bottom of the channel. All sampling protocols and test procedures shall be in accordance with procedures and protocols approved by the Division.

2. A minimum of four independent daily means must be used to calculate the average for the 7-Day Average standard. A minimum of eight independent daily means must be used to calculate the average for the 30-Day Average standard. The four days and the eight days must be representative of the 7-Day and the 30-Day periods respectively. The daily means shall be the mean of the daily high and low values. In calculating the mean values, the dissolved oxygen saturation value shall be used in place of any dissolved oxygen measurements which exceed saturation.
3. The 7-Day Mean minimum is the average of the daily minimums measured at the location on each day during any 7-Day period.
4. North of the Lupton Bottoms Ditch diversion, the ELS 7-Day average standards for the period July 1 – June 31 shall be 4.6 mg/L.
5. During a 24 hour day dissolved oxygen levels are likely to be lower during the nighttime when there is no photosynthesis. The dissolved oxygen levels should not drop below the acute standard (ELS acute standard of 3.0 mg/L or the OLS standards of 2.0 mg/L). However, if during the ELS period multiple measurements are below 3.0 mg/L during the same nighttime period, the multiple measurements shall be considered a single exceedance of the acute standard. For measurements below 2.0 mg/L during either the ELS or the OLS periods, each hourly measurement below 2.0 mg/L shall be considered an exceedance of the acute standards.
6. In July, the dissolved oxygen level in Segment 15 may be lower than the 3.0 mg/L acute standard for up to 14 exceedances in any one year and up to a total of 21 exceedances in three years before there is a determination that the acute dissolved oxygen standards is not being met. Exceedances shall be counted as described in Footnote 5.

Ammonia:

Early Life Stage Protection Period (April 1 through July 31)

Ammonia

Warm Water = (mg/l as N)Total

$$acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$$

$$chronic (Apr1 - July31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN \left(2.85, 1.45 * 10^{0.028(25 - T)} \right)$$

$$chronic(Aug1 - Mar31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * 1.45 * 10^{0.028 * (25 - MAX(T, 7))}$$

NH₃ = old TVS

Site-Specific Minimum Dissolved Oxygen and Ammonia Standards for Middle South Platte Segment 1a

Dissolved Oxygen:

STANDARDS

Early Life Stage Protection Period (April 1 through July 31)

1-Day^{1,4,5} 3.0 mg/L (acute)

7-Day Average^{1,2} 5.0 mg/L

Older Life Stage Protection Period (August 1 through March 31)

1-Day^{1,4} 2.0 mg/L (acute)

7-Day Mean of Minimums^{1,3} 2.5 mg/L

30-Day Average^{1,2} 4.5 mg/L

Refer to Section 38(6)(4)(c) for Dissolved Oxygen assessment locations.

Footnotes

1. For the purpose of determining compliance with the standards, dissolved oxygen measurements shall only be taken in the flowing portion of the stream at mid-depth, and at least six inches above the bottom of the channel. All sampling protocols and test procedures shall be in accordance with procedures and protocols approved by the Division.
2. A minimum of four independent daily means must be used to calculate the average for the 7-Day Average standard. A minimum of eight independent daily means must be used to calculate the average for the 30-Day Average standard. The four days and the eight days must be representative of the 7-Day and the 30-Day periods respectively. The daily mean shall be the mean of the daily high and low values. In calculating the mean values, the dissolved oxygen saturation value shall be used in place of any dissolved oxygen measurements which exceed saturation.
3. The 7-Day Mean Minimum is the average of the daily minimums measured at a location on each day during any 7-Day period.
4. During a 24 hour day, dissolved oxygen levels are likely to be lower during the nighttime when there is no photosynthesis. The dissolved oxygen levels should not drop below the acute standard (ELS acute standard of 3.0 mg/L or the OLS standard of 2.0 mg/L). However, if during the ELS period multiple measurements are below 3.0 mg/L during the same nighttime period, the multiple measurements shall be considered a single exceedance of the acute standard. For measurements below 2.0 mg/L during either the ELS or the OLS periods, each hourly measurement below 2.0 mg/L shall be considered an exceedance of the acute standard.
5. In July, the dissolved oxygen level in Segment 1a may be lower than the 3.0 mg/L acute standard for up to 14 exceedances in any one year and up to a total of 21 exceedances in three years before there is a determination that the acute dissolved oxygen standards is not being met. Exceedances shall be counted as described in Footnote 4.

Ammonia:

Early Life Stage Protection Period (April 1 through July 31)

Ammonia

Warm Water = (mg/l as N)Total

$$acute = \frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$$

$$chronic (Apr1 - July31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * MIN \left(2.85, 1.45 * 10^{0.028(25 - T)} \right)$$

$$chronic(Aug1 - Mar31) = \left(\frac{0.0577}{1 + 10^{7.688 - pH}} + \frac{2.487}{1 + 10^{pH - 7.688}} \right) * 1.45 * 10^{0.028 * (25 - MAX(T, 7))}$$

NH₃ = old TVS

Warm Water Acute = 0.62/FT/FPH/2^(4 old) in mg/ (N)

Table 2
SITE SPECIFIC RADIONUCLIDE STANDARDS*

(in Picocuries/Liter, except as noted)

The radionuclides listed below shall be maintained at the lowest practical level and in no case shall they be increased by any cause attributable to municipal, industrial, or agricultural practices to exceed the site specific numeric standards.

A. Ambient based site-specific standards:				
	Segment 2 Standley Lake	Segment 3 Great Western Reservoir	Segment 4a Segment 5 Woman Creek	Segment 4a Segment 4b Segment 5 Walnut Creek
Gross Alpha	6	5		
Gross Beta	9	12		
Plutonium	.03	.03	0.15** ***	0.15** ***
Americium	.03	.03	0.15** ***	0.15** ***
Tritium	500	500	500	500
Uranium	3	4	16.8 µg/l	16.8 µg/l
B. Other site-specific standard applicable to segments 2,3,4a, 4b, and 5.				
Curium	60	60	60	60
Neptunium	30	30	30	30

*Statewide standards also apply for radionuclides not listed above.

**0.15pCi/l Statewide Basic Standards.

***For plutonium and americium measurements in Segment 5 in Woman Creek and Segment 5 in Walnut Creek, attainment will be assessed based on the results of a 12-month flow-weighted rolling average concentration (computed monthly).

STREAM CLASSIFICATIONS and WATER QUALITY STANDARDS – FOOTNOTES

- (A) Whenever a range of standards is listed and referenced to this footnote, the first number in the range is a strictly health-based value, based on the Commission's established methodology for human health-based standards. The second number in the range is a maximum contaminant level, established under the federal Safe Drinking Water Act that has been determined to be an acceptable level of this chemical in public water supplies, taking treatability and laboratory detection limits into account. Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range. Water bodies will be considered in attainment of this standard, and not included on the Section 303(d) List, so long as the existing ambient quality does not exceed the second number in the range.
- (B) Assessment of adequate refuge shall rely on the Cold Large Lake table value temperature criterion and applicable dissolved oxygen standard rather than the site-specific temperature standard.

Control Commission

Department of Public Health & Environment

NOTICE OF PUBLIC RULEMAKING HEARING BEFORE THE COLORADO WATER QUALITY CONTROL COMMISSION

SUBJECT:

For consideration of the adoption of new temporary modifications and revisions to current temporary modifications of water quality standards expiring on or before December 31, 2021, and new site specific standards that allow for the deletion of current temporary modifications expiring on or before December 31, 2021, for multiple segments in the Classifications and Numeric Standards for:

- Arkansas River Basin, Regulation #32 (5 CCR 1002-32);
- Upper Colorado River Basin and North Platte River, Regulation #33 (5 CCR 1002-33);
- San Juan River and Dolores River Basins, Regulation #34 (5 CCR 1002-34);
- Gunnison and Lower Dolores River Basins, Regulation #35 (5CCR 1002-35);
- Rio Grande Basin, Regulation #36 (5 CCR 1002-36);
- Lower Colorado River Basin, Regulation #37 (5 CCR 1002-37); and
- South Platte River Basin, Laramie River Basin, Republican River Basin, Smoky Hill River Basin, Regulation #38 (5 CCR 1002-38).

Proposed revisions and proposed Statements of Basis, Specific Statutory Authority and Purpose have been submitted by the following:

- Exhibit 1 - Regulation #32, Water Quality Control Division (division);
- Exhibit 2 - Regulation #33, division;
- Exhibit 3 - Regulation #34, division;
- Exhibit 4 - Regulation #35, division;
- Exhibit 5 - Regulation #36, division;
- Exhibit 6 - Regulation #37, division;
- Exhibit 7 - Regulation #38, division;
- Exhibit 8 - Regulation #32, Resurrection Mining Company; and
- Exhibit 9 - Regulation #33, Climax Molybdenum Company.

In these attachments, proposed new language is shown with double-underlining and proposed deletions are shown with ~~strikeouts~~. Any alternative proposals related to proposed new temporary modifications or current temporary modifications identified in Exhibits 1 through 9, with expiration dates on or before December 31, 2021, will also be considered.

SCHEDULE OF IMPORTANT DATES

Proponent's prehearing statement due	9/18/2019 5:00 pm	Additional information below.
Party status requests due	10/2/2019 5:00 pm	Additional information below.

Responsive prehearing statements due	10/16/2019 5:00 pm	Additional information below.
Rebuttal statements due	11/20/2019 5:00 pm	Additional information below.
Last date for submittal of motions	11/22/2019 by noon	Additional information below.
Notify commission office if participating in prehearing conference by phone	11/22/2019 by noon	Send email to cdphe.wgcc@state.co.us with participant(s) name(s)
Prehearing Conference (mandatory for parties)	11/25/2019 3:30 pm	Carson Conference Room Department of Public Health and Environment 4300 Cherry Creek Drive South Denver, CO 80246 Google Hangout: +1 475-441-4506 PIN: 479 724#
Cutoff of negotiations	11/27/2019	N/A
Division's consolidated proposals	12/4/2019	N/A
Rulemaking Hearing	12/9/2019 9:00 am	Sabin Cleere Conference Room Department of Public Health and Environment 4300 Cherry Creek Drive South Denver, CO 80246

HEARING SUBMITTALS:

For this hearing, the commission will receive all submittals electronically. Submittals must be provided as PDF documents, except for raw data exhibits which may be provided as Excel workbooks. Submittals may be emailed to cdphe.wgcc@state.co.us, provided via an FTP site, CD or flash drive, or otherwise conveyed to the commission office so as to be received no later than the specified date.

PARTY STATUS:

Party status requests must be in writing and must provide:

- the organization's name,
- one contact person,
- a mailing address,
- a phone number, and
- email addresses of all individuals associated with the party who wish to be notified when new submittals are available on the commission's website for review.

In accordance with section 25-8-104(2)(d), C.R.S., any person who believes that the actions proposed in this notice have the potential to cause material injury to his or her water rights is requested to so indicate, along with an explanation of the alleged harm, in their party status request.

PREHEARING AND REBUTTAL STATEMENTS:

Each party must submit a prehearing statement: parties that have proposed revisions attached as exhibits to the notice must submit a proponent's prehearing statement. All other parties must submit a responsive prehearing statement. Proponents may also submit responsive prehearing statements when there are multiple proposals attached to the notice.

Each prehearing and rebuttal statement must be provided as a separate PDF document from any accompanying written testimony or exhibits.

Following the rebuttal statement due date, no other written materials will be accepted from parties except for good cause shown.

Oral testimony at the hearing should primarily summarize written material previously submitted. The hearing will emphasize commission questioning of parties and other interested persons about their written prehearing submittals. Introduction of written material at the hearing by those with party status will not be permitted unless authorized by the commission.

PREHEARING CONFERENCE:

Attendance at the prehearing conference is mandatory for all persons requesting party status. Parties needing to participate by telephone are encouraged to notify the commission office prior to the prehearing conference. Remote participants can call +1 475-441-4506 and enter the PIN: 479 724#.

Following the cut-off date for motions, no motions will be accepted, except for good cause shown.

PUBLIC PARTICIPATION ENCOURAGED:

The commission encourages input from non-parties, either orally at the hearing or in writing prior to the hearing. Written submissions should be emailed to cdphe.wgcc@state.co.us by November 26, 2019.

SPECIFIC STATUTORY AUTHORITY:

The provisions of sections 25-8-202(1)(a), (b), and (2); 25-8-203; 25-8-204; and 25-8-402, C.R.S., provide the specific statutory authority for consideration of the regulatory amendments proposed by this notice. Should the commission adopt the regulatory language as proposed in this notice or alternative amendments, it will also adopt, in compliance with section 24-4-103(4) C.R.S., an appropriate Statement of Basis, Specific Statutory Authority, and Purpose.

Dated this 12th day of August, 2019 in Denver, Colorado.

REGULATION NO. 32 - CLASSIFICATIONS AND NUMERIC STANDARDS FOR ARKANSAS RIVER BASIN

5 CCR 1002-32

[Editor's Notes follow the text of the rules at the end of this CCR Document.]

32.6 TABLES

(2) Abbreviations:

(c) Temporary Modification for Water + Fish Chronic Arsenic Standard

- (i) The temporary modification for chronic arsenic standards applied to segments with an arsenic standard of 0.02 µg/l that has been set to protect the Water + Fish qualifier is listed in the temporary modification and qualifiers column as As(ch)=hybrid.
- (ii) For discharges existing on or before 6/1/2013, the temporary modification is: As(ch)=current condition, expiring on 12/31/~~2021~~2024. Where a permit for an existing discharge is reissued or modified while the temporary modification is in effect, the division will include additional permit Terms and Conditions, which may include requirements for additional monitoring, source identification, and characterization of source control and treatment options for reducing arsenic concentrations in effluent.
- (iii) For new or increased discharges commencing on or after 6/1/2013, the temporary modification is: As(ch)=0.02-3.0 µg/l (Trec), expiring on 12/31/~~2021~~2024.
 - (a) The first number in the range is the health-based water quality standard previously adopted by the Commission for the segment.
 - (b) The second number in the range is a technology based value established by the Commission for the purpose of this temporary modification.
 - (c) Control requirements, such as discharge permit effluent limitations, shall be established using the first number in the range as the ambient water quality target, provided that no effluent limitation shall require an "end-of-pipe" discharge level more restrictive than the second number in the range.

32.63 STATEMENT OF BASIS, SPECIFIC STATUTORY AUTHORITY AND PURPOSE; DECEMBER 9, 2019 RULEMAKING; FINAL ACTION January 13, 2020; EFFECTIVE DATE JUNE 30, 2020

The provisions of C.R.S. 25-8-202(1)(a), (b) and (2); 25-8-203; 25-8-204; and 25-8-402; provide the specific statutory authority for adoption of these regulatory amendments. The commission also adopted in compliance with 24-4-103(4) C.R.S. the following statement of basis and purpose.

BASIS AND PURPOSE

Pursuant to the requirements in the Basic Standards (at 31.7(3)), the commission reviewed the status of temporary modifications scheduled to expire before December 31, 2021 to determine whether the temporary modification should be modified, eliminated, or extended.

For the temporary modifications set to expire after the effective date of this hearing, the commission reviewed progress toward resolving the uncertainty in the underlying standard and/or the extent to which conditions are a result of natural or anthropogenic conditions, and evaluated whether the temporary modifications were still necessary.

A. Temporary Modifications for Standards Other than Arsenic

The commission took no action on the following temporary modification:

Middle Arkansas Segment 2: temporary modifications of the acute and chronic temperature standards (expire 7/1/2021). Colorado Parks and Wildlife continues to make progress to resolve the uncertainty. The commission made no change to the expiration date, as the original time allotment was deemed adequate to resolve the uncertainty.

The commission took no action on temporary modifications that were set to expire on or before the effective date of this hearing. The commission deleted the following temporary modifications, which were allowed to expire:

Upper Arkansas Segment 8b (cadmium and zinc)

B. Temporary Modifications for Arsenic

The temporary modification of the chronic arsenic standard, which applies to numerous segments with a standard of 0.02 µg/l to protect the Water + Fish use, was extended from 12/31/2021 to 12/31/2024. No changes were made to the temporary modification operative values at 32.6(2)(c). For discharges existing on or before 6/1/2013, the temporary modification remains at As(ch)=current condition. For new or increased discharges that commence on or after 6/1/2013, the temporary modification remains at 0.02–3.0 µg/L (total recoverable). The extension provides time to resolve the uncertainty in the underlying standard for arsenic to protect human health. Significant uncertainty remains regarding the appropriate standard to protect the use and the extent to which ambient levels of arsenic are the result of natural or irreversible conditions. In addition, there is widespread instream non-attainment of the underlying standard and predicted or demonstrated compliance problems with permit limits based on the underlying standard, as demonstrated in the division's Prehearing Statement (*to be determined*).

It is anticipated that the uncertainty regarding the appropriate underlying standard for arsenic to protect human health will be resolved by June 2024, with the adoption of new statewide arsenic use-based standards. The division presented [division's Prehearing Statement (*to be determined*)] a detailed plan to resolve the multifaceted uncertainty for arsenic. The plan includes conducting a field study to investigate the proportion of inorganic (versus total) arsenic in the tissue of fish collected from Colorado waters, deriving a bioaccumulation or bioconcentration factor for arsenic, appropriate for use in Colorado, and

characterizing ambient levels of arsenic in surface waters and groundwater statewide. As discussed below, the division will also be gathering, through permit requirements, targeted data from facilities benefiting from the arsenic temporary modification. These data will help the division to better understand the contribution of arsenic in effluent from permitted facilities to ambient levels of arsenic in Colorado waters and will inform the extent to which ambient levels of arsenic are the result of natural or irreversible conditions.

Effluent arsenic concentration data from facilities throughout the state demonstrate that many facilities will likely have issues meeting effluent limits based on the anticipated revised arsenic water quality standard to protect human health. As a result, there is a widespread need to make progress to understand sources of arsenic and options for source control and treatment. To ensure such progress is made, when implementing the “current condition” temporary modification in permits, the division will include additional permit Terms and Conditions, which may include requirements for additional monitoring, source identification, and characterization of source control and treatment options for reducing arsenic concentrations in effluent. Under the duration of the temporary modification, facilities would not be required to implement facility improvements to meet a specified effluent limit; however, facilities may be required to evaluate arsenic source control and treatment options for their facility. For purposes of evaluating options to reduce arsenic concentrations in effluent, the arsenic treatment removal recognized in the 2013 Arsenic Rulemaking (3 µg/L) can be used as a point of reference until the uncertainty in the underlying standard is resolved. Implementation guidance for these requirements was included in the division’s Prehearing Statement Exhibit (*to be determined*). These requirements are reasonable and would not cause undue economic burden for facilities, but will ensure that progress is being made toward future attainment of the underlying standards and protection of the classified uses. Implementation of these requirements would function to increase the amount of time facilities would have for long-term planning and encourage data collection that would facilitate implementation of the most appropriate source reduction and treatment options and selection of the most appropriate regulatory pathways once the new underlying standard is adopted for arsenic.
