Subject: Re: Should every Colorado county have the same voting technology?

Any voting system should prioritize security, verification, and accuracy over speed, convenience, or cost.

There needs to be a thorough risk management and analysis process to determine risks (fraud, inaccuracies, etc.) and handling strategies.

If a single system creates efficiencies and economies of scale, that would be positive; however, just as a single disease can wipe out a monoculture wheat field or, in the case of Ireland, an entire nation, a uniform system may be hacked or corrupted in a unified attack.

My opinion, whatever it's worth...
